At the last week's meeting of the Metropolitan Board of Works, their chief engineer (Mr. Bazalgette) presented his monthly report of the progress of the Main Drainage and Northern Thames Embankment works up to the present time, of which the following is a summary:—Twelve miles of connecting sewers had been constructed on the Middle-level sewer contract, at the estimated cost of 309,000*l.* Nearly 4 miles of the sewers intended for the interception of the western district drainage had been completed at a cost of about 53,000*l.* Three out of four of the compartments of the northern outfall reservoir were now completed, and constantly received the sewage brought down from the High and Middle-level sewers, and discharged such sewage into the Thames at Barking, at ebb tides only. The fourth compartment, the embankment over the whole reservoir, and the sluice-house, would shortly be completed. The value of the work here executed amounted to about 164,500*l.* About four miles of the southern low sewer had been completed, at the estimated cost of 121,000*l.*, and, under the contract for the works at Crossness, work to the amount of 225,000*l.* had been executed. On the first contract for the Thames Embankment (between Westminster and Waterloo bridges) work to the amount of 33,000*l.* had been executed; but on the second contract (from Waterloo Bridge to the eastern end of Temple Gardens) the work had not been altogether of so satisfactory a nature, and it would be necessary in some respects to adopt a new system in carrying out the work.

THE MASTERS AND WORKMEN'S ACT.

A CONFERENCE of delegates from the various trades' councils and other organised bodies of workmen throughout the country, called together at the instance of the United Trades' Societies of Glasgow, for the purpose of procuring an amendment of the statute law relating to contracts between masters and workmen, has been held in the rooms of "The Universal League," 18, Greek-street, Soho. Delegates were in attendance representing, in the aggregate, it is said, upwards of 200,000 members of trades' societies. A series of resolutions were adopted, declaring that the unequal state of the law as to questions arising under contracts of service between masters and workmen is most unjust and oppressive as against the workmen, and ought to be repealed or amended; and giving the heads of a Bill which the conference considered ought, with as little delay as possible, to be introduced into Parliament with the view of effecting an alteration of the law. Copies of resolutions were ordered to be forwarded to every member of the House of Commons.

The meetings were brought to a close by a conference with several members of the House of Commons more or less favourable to an alteration of the law. The conference was held in one of the committee-rooms of the House, and was attended by about thirty members of Parliament, who recommended that the delegates should instruct their solicitor to draw up a Bill embodying their wishes, and to place it in the hands of Mr. Cobbett, M.P. for Oldham, who had consented to take charge of it; and that a select committee should be obtained, before whom evidence should be given in its favour, it not being thought likely that the Government would offer any opposition to such a course.

STRIKES AND WAGES.

THE numerous strikes which have already taken place, and which are threatened, more especially amongst those connected with the building trades, require more especial notice than has yet been directed to the subject. The accounts of these disputes come from many parts of the country; and it is to be remarked that, in a majority of instances, the men have obtained either all or part of what they claimed.

The difference in the price of labour in the same trades in the various towns and districts throughout England is greater than is generally supposed. In some cases there is a difference of 7s. or 8s., and upwards, between the weekly wages paid to bricklayers in the metropolis and in places at a distance. It is to be taken into account that, in most parts of the provinces, house-rent and some of the necessaries of life are to be had at a less cost; but this is not sufficient to account for the considerable difference. We must, therefore, look for other causes which are affecting the labour market of bricklayers, masons, labourers, and many others. The first and chief are the wonderful demand which there is in all directions for houses ,shops, warehouses, and factories of an increased size and better construction; the extension of railways; the construction of docks, and the enlargement of those which have been for some time in existence; the building of new churches in almost every town and throughout the country; the laying out of new cemeteries; the making of great harbours; the improvement of our ports; and other vast works; while the extension of trade and the increase of the national prosperity and wealth have caused such a demand for useful labour as we have no account of in our English history. Nevertheless, there is a lamentable extent of labour which is of little or no value. It may be hoped, however, that, as time rolls on, we shall find some of the sunshine entering places which are now in shadow.

The demand for labour is showing itself in various ways and as affecting various classes. The general cost of the food and clothing of the workman's family has advanced; and it is likely that house-rent will also rise considerably. Nor can this be wondered at, when the advance in the price of building materials and of labour is taken into account. Difficulty is experienced in getting men for the army. So much is this the case that the standard of the height of the soldier has been reduced. But even under these circumstances, some advantages which have been offered fail to bring the requisite number of men who can pass the medical examination to which we referred in a recent article on the condition of the soldier. Notwithstanding all this, strange to say, wholesale emigration continues to flow, from Ireland chiefly, towards America.

Besides the causes referred to, the immense influx of gold into this country has necessarily tended to raise the price of other commodities.

THE BUILDING TRADES MOVEMENT.

Leeds.—At a conference between the master-builders and the operative carpenters and joiners of Leeds, an arrangement has been come to, under which the lock-out ceases. The men agree to accept payment by the hour, at the rate proposed by the masters—5½d. per hour, and the masters agree to reckon 56 hours as a week, instead of 58½, as was previously the case.

Sheffield.—We understand, that at a meeting of carpenters it has been resolved to ask for an advance of 2s. per week upon the present rate of wages, and also to have the working hours regulated by the other branches of the building trades. Alterations were also resolved upon in several minor particulars. Seven days' notice of these resolutions was ordered to be forwarded to the employers.

Malton.—The masons and Bricklayers of Malton, Old Malton, and Norton, are on strike. A few old hands, however, remain at work. It is understood the men demand an advance of 6d. per day and shorter working hours (some a Saturday half-holiday), to which the masters will not accede. Some are taking means to find fresh hands. The strike has caused much inconvenience, as there are many buildings about the towns in an incomplete state.

Newcastle-upon-Tyne.—The house-painters have resolved to give the masters a week's notice for an advance from 24s. to 27s. per week.

Leicester.—Some of the men have resumed their work without the increased demand having been granted. The union men have, however, held meetings and come to the determination not to go in without the advance. A meeting of masters was held and adjourned. The local *Advertiser* says that when the masters find holding out useless, they will give the advance sought for. It is the intention of the bricklayers in the town to strike for an advance of 4d. a day; and the joiners, carpenters, and painters, for an increase of 6d. per day. Their average wages at present are from 3s. 10d. to 4s. per day. The master bricklayers have recently held a meeting, and decided to let the question stand over till the first Saturday in July, when the advance asked by the bricklayers' labourers will be granted on the condition that union men do not intimidate workmen who are non-unionists. The painters have struck for an advance.

Exeter.—A strike among the operatives in the building trade has occurred here, the carpenters and joiners and plasterers demanding increased wages. The latter state that the rate of wages is lower than in any other part of the country, and that it is not sufficient to enable them to maintain themselves and families. Strikes in other towns of the west have also taken place.

PROVINCIAL NEWS.

Luton.—A meeting of persons interested in the establishment of a corn exchange, plait market, and other accommodation for the town, has been held in the Town-hall here. The committee appointed some time ago to consider the matter, submitted several plans, which were discussed. The meeting seemed to be in favour of a site on the market hill; but it was understood that the subject should have further consideration.

St. Ives (Cornwall).—A new pier is to be erected here. It will be 615 feet long, 540 feet being below high-water mark. It will commence at the root of the old pier, and run in a south-south-easterly direction into a depth at spring tides of 30 feet at high water, and 6 feet at low water. At its root the new pier will be curved; but the outer and greater portion will form an angle of 67 degrees with Smeaton's erection. Thus between the two a triangular space of water will be enclosed, which may very readily and at comparatively small expense be converted into a floating dock. The pier works will consist mainly of two parts,—a sea wall next the shore, formed wholly of stone; and a breakwater, similarly constructed to that at Falmouth, consisting of stone and timber. The sea-wall will be 191 feet long. The engineer of the works is Mr. Michael Scott, of London; and

the contractor, Mr. Robertson, also of London. The contract has been taken at 15,500*l.*, and is to be completed by the end of September, 1865. A yard has been enclosed for the erection of creosoting apparatus; and the excavation for the sea-wall has been commenced.

Falmouth.—The erection of a building at Falmouth to fulfil the purposes of a town-hall and accommodate the county court, which has been so long deferred, will be commenced forthwith. The contracts and plans have been signed by Messrs. Olver & Sons, the contractors, and by Mr. Mules, the treasurer of the county court, on behalf of the Treasury. The entire cost of these buildings will be from 3,000*l.* to 3,500*l.* The site selected is in the Moor, or Market-square, in the centre of the town. The structure will have a frontage in the square of 72 feet, and one of 67 feet in Killigrew-road. The architect is Mr. C. Reeves, of London.

Bradford.—A public meeting has been held here to devise measures to keep open the intended site (laid bare by the removal of buildings) for the new Exchange. The meeting was numerously and influentially attended, and the Mayor presided. The sum required to place the Exchange Company in possession of another site in lieu of the present one was computed at 25,000*l.*, and it is intended to make an effort to obtain a large proportion of it (if not the whole) by public subscription. A resolution was unanimously passed expressive of the desirability of keeping open the site, and a committee of gentlemen was appointed to canvass the inhabitants in aid of the subscription.

Hull.—The foundation-stone of the new West Dock has been laid. This dock is to be constructed along the west foreshore of the Humber, on a line parallel to it, being in this respect unlike the other docks at Hull, as they run into the heart of the town. At the present time, the dock accommodation amounts to 85 acres, and the making of the new dock will raise the extent to 102 acres. The construction is entrusted to Mr. McCormack, M.P., and is expected to be completed by the stipulated time, June, 1866, at a cost of 500,000*l.* The consulting engineer of the company is Mr. Hawkshaw, under whose direction the works are carried on.

The Hartlepools.—The corporation of Hartlepool have serious thoughts (indeed, the committee are inviting plans, &c.) of erecting a covered market for the borough, at a cost not to exceed 3,500*l.* At West Hartlepool, also, it has been determined to establish a chamber of commerce.

Whitehaven.—Mr. Hawkshaw, C.E., has been at Whitehaven, to make inquiry on the part of the Public Works Loans Commissioners into Mr. Rendel's scheme for a wet dock on the north shore. Subject to Mr. Hawkshaw's approval of Mr. Rendel's plan, it is said, the Loans Commissioners are prepared to advance, on security of the harbour dues, 100,000*l.* at 3¼ per cent., and 15,000*l.* at 5 per cent.; and should more money be needed for completion of the works, it will be advanced by the Earl of Lonsdale, the lord of the manor.

Darlington.—In this town 12,400 square yards of land have been sold by auction in one lot, and realized 4,310*l.* In 1704 this land was purchased for 100*l.* It is charity property, and has been producing a rent of only 25*l.* a year.

FROM SCOTLAND.

Glasgow.—The authorities of the University have entered into arrangements with the promoters of the City of Glasgow Union Railway, by which, in the event of the Bill for that railway passing into an Act, the grounds of the present College will be acquired by the railway company for the purpose of being converted into a general goods station. This sale is, of course, connected with a project for the removal of the University to a more eligible site. The new University is to be erected in the west part of the city, and negotiations, it is said, are far advanced for acquiring Gilmorehill for the site of the new buildings.

Dumfries.—The erection of the new Courthouse is proceeding. The building has attained a height of two stories, though only one is above the level of Buccleuch-street. The building is in the old Scottish baronial style. The material is the red sandstone of the district. The dressings are not polished, but drove hewn; and the other masonry is of hammered dressed stones, in regular courses. The main entrance has a cable moulding over the doorway, terminating in knots, forming trusses on each side of the doorway. A turret projects from the centre of the front elevation, above the main doorway, the base of the mouldings of which has been laid.

Borthwick.—A new parish church, recently opened, has been presented to Borthwick by Mr. David Kidd, of London, wholesale stationer, who is a native of the town. The church is cruciform. A portion of the nave wall is supported on stone pillars and arches. The roof is of open timber-work, and the windows are filled in with tracery. The apse, which is divided from the church by an ornamental screen, had long been the burying-place of the Arniston family; and Mr. Dundas, of Arniston, has put up a stone monument on the wall of the church recording the fact. Several other monuments have also been affixed to the new church. The old chapel to the south is in the meantime to be used as a vestry. An ornamental circular tablet above the arch of the apse records that "This site was occupied by a church destroyed by fire in 1775." There are three entrances to the church, the principal of which is through the base of the spire. The spire is about 120 feet in height, and springs from a tower with two buttresses at each angle. In the west gable there is a large circular window, and in the north gable a shafted window 10 feet wide by 20 feet high, divided in the lower part by three mullions, and filled in above with tracery. The points of the gables are all surmounted by ornamental crosses. The church is without a gallery, and seated for 600 persons. Mr. Kidd's gift has cost nearly 4,000*l.*

Forres.—The "hotel movement" is ranging far north; and we should not wonder to hear at last of those "hotels in Lapland" as to the "accommodation" in which the Cantab inquired of the traveller. A large hotel is to be built in Forres, on the ground lying between the Nairn-road and the road leading to the railway station. The architect is Mr. Petrie, of Elgin, who is to superintend the works, for which the following tradesmen have been the successful contractors:—Mason work, Messrs. Humphrey & Rennie, Elgin; carpenter, Mr. P. M'Leod, Forres; slater, Mr. Desson, Forres; plasterer, Messrs. Duffus & Ross, Forres; plumber, Mr. Gordon, Elgin. The building is to be three stories high, with commercial rooms on the ground floor; and the construction of the house will be such as to make it suitable for a family hotel as well as for a common one. The front is to be in the Elizabethan style, with oriel windows rising to the second story.

Elgin.—The time for taking in estimates for the erection of the new Court-house in Elgin has expired, but it will be some time before the successful candidates can be known. The committee send the estimates to the Treasury for their approval.

Aberdeen.—The prevalence of typhus fever in the district of the town, between Virginia-street and the Quays, has led to an inquiry as to the state of the sewerage in that locality. At a recent meeting of the Police Board, a report by Mr. Robert Anderson was submitted, which stated that the drainage of the locality was in a very bad state, the levels and situations being very unfavourable, and the foundations of the houses subject to infiltration of water from the river and docks. The drainage of this district can only discharge its contents at low water, the sewage being in many tides pent up for nine hours out of the twelve, and the sewage from the higher parts of the town falling into it, the space for accumulation in the Quay Sewer is soon filled up, and the sewage flows back through the Shorelands and other drains, into the cellars and foundations of the houses, and sometimes over the surface of the streets and floors of the dwelling-houses. As a remedy for this, Mr. Anderson suggested two plans, one of which has been adopted. The total cost will be about 975*l.* The Board, until now, has never possessed power to deal with the sewerage of the town, but arrangements are in progress for laying it out into drainage districts according to the Act.

Inverness.—This is now the head-quarters of the Sappers and Miners engaged upon the Government trigonometrical survey of the North, and will, in all probability, continue so for the next ten years. They are working in a north-easterly direction, towards the mountainous districts of Inverness-shire.

CHRIST CHURCH, MARYLEBONE.—Mr. Cave Thomas is making progress with the largest of the altar pictures for Christ Church, Marylebone, "The Exodus of the Gifts of the Spirit," the canvas of which is 36 feet in length.

WRONG TO POOR BOYS AT SEVENOAKS

WE are glad to find that the remarks made a to the Boswell Charity, Sevenoaks, in our recen paper on Knole, have awakened attention, an are leading to discussion. The *South Eastern Gazette*, after quoting our observations, an giving a brief account of the foundation of th charity (instituted, by the way, by *Lady* Bos well, though the recipients were to be called Si William Boswell's scholars), says;—

"Some years ago the funds had accumulated to ove 2,000*l.*, and the then trustees expended that money in th erection of a large building containing two school-room for boys and girls, and teachers' residences, and *both* schools are maintained by the charity, so that it is not want of means which has caused 'the wrong to poor boy at Sevenoaks,' but a perversion of the funds; and th amount expended in supporting the girls' school alone, about 60*l.* a year, would almost be a sufficient sum to ap prentice the boys. The charity accounts also show that the sum of 10*l.* is given to each of the schools at Riverhead and the Weald. The intention of the trustees is rather to educate the whole poor children of the parish than to carry out Lady Boswell's expressed intention. No one would object to Lady Boswell's endowment being extended as much as possible, but the first duty of those who have charge of it is clear. The yearly rent of the estate is now 430*l.*; and the accounts show that on the 28th December, 1863, there remained in the treasurer's hands, 283*l.* 3*s.*, in addition to 265*l.* 19*s.* 8*d.* in 3 per cent. Consols. We think the time has now arrived for some movement on the part of the parish officers. We have on more than one occasion called attention to the state of this excellent endowment; the next step should be, if necessary, an appeal to the Charity Commissioners, who, in the face of Lady Boswell's will, would be compelled to order that the funds entrusted to them should be administered in accordance with that benevolent lady's intention, so that 'the wrong to poor boys at Sevenoaks' should no longer exist, and that there should be such an extension of the endowment as might be considered most advantageous for the parish."

If this be brought about, as we hope will be the case, we shall have additional reason to be pleased with our visit to Knole and Sevenoaks.

BRISTOL SOCIETY OF ARCHITECTS.

At the monthly meeting held June 1st, Mr. S. B. Gabriel in the chair, the following gentlemen were elected student members:—E. Barnes, C. Taylor, R. M. Hughes, E. Hansom, A. Harford, and F. Martin.

Mr. S. C. Fripp (vice-president), Mr. E. W. Godwin, and Mr. C. J. Phipps (secretary), were appointed delegates to represent this society at the next meeting of the Architectural Alliance.

Mr. C. Underwood read a paper upon "The Bristol and West of England System of Measuring and Valuing Artificers' Work," which elicited a long discussion.

THE FEMALE SCHOOL OF ART.

THERE was a large assemblage of ladies at Burlington House to witness the distribution of prizes to the successful competitors amongst the pupils of the Female School of Art, which is under the special patronage of her Majesty and the Princess of Wales. Lord Houghton took the chair, and Professor Donaldson read a statement and report, which showed that the school was progressing in a satisfactory manner, and that the ability displayed by some of the students was of a high order. The chairman then distributed a very long list of prizes, the chief of which were the national medallions, seven having been granted. One young lady, Miss Sarah M'Gregor, took two national medallions, which marked rare talents. Lord Houghton, in addressing the meeting on the pleasing nature of the business, said he was delighted to see, by the specimens in an adjoining room, and still more by those at South Kensington, that the pupils had shown such devotion to nature. He was particularly gratified by the success of this institution, because it proved that the female sex of this country was more and more acquiring that independent position which he believed it was most advantageous for civilization they should occupy. Women who were succeeding in thus educating themselves were not only laying the foundation for obtaining their own means of living, but also laying the foundation for the happiness of their future homes, for the benefit of the children whom they might have to educate, and for the gratification of the husbands whom they might wish to please. In this country there was not only a deficiency of employment for women, but he was ashamed to say there was, on the part of the men of this country, a great unwillingness to let them compete on equal terms. On this public occasion he protested against such a course. The Rev. Mr. Thorold said it was very necessary that the school should receive such assistance that it could be made self-supporting.

ROYAL HORTICULTURAL SOCIETY.

THE flower show last week was very successful, whether as regards the display or the number of persons present. The azaleas were superb. The groups of fruits and flowers for the decoration of dinner-tables, for prizes offered by Sir C. Wentworth Dilke, excited much interest. The award ran thus:—1st prize, Mrs. Worthington Bliss, Eccleston-square; 2nd, Miss March, St. James's Palace; 3rd, Miss Wint, 1, Kensington-gate. Highly commended,—Lady Holmesdale; Mrs. Cutbush, Highgate. Highly commended for the side groups only,—Viscountess Combermere; Lady Emily Peel. For the Ladies' prizes, offered for single plants grown in a drawing-room for drawing-room decoration, Mrs. Dombrian, of Deal, was the successful competitor.

The great tent, which has been erected under the direction of Capt. Fowke, presented a glorious show of rhododendrons, and was a fine sight. This will remain open for some time. Some claims made for the constructor of the tent by his friends have brought down disputing letters; one, notably, from Major Rhodes, who has patented the "suspension system of tent-architecture," and asserts that in this tent all his details are copied.

This immense structure is 300 feet long, 120 feet wide, and 55 feet in height. It is supported by two enormous masts, 6 feet in diameter at the base, with iron wire ropes two-thirds of a foot in circumference, tightened by screws to anchors weighing a ton each, buried 10 feet deep in the earth, and held there by baulks of timber 10 feet long and 1 foot square, fixed across the flukes.

ARCHITECTURAL EXHIBITION LECTURES.

ON the 31st ult., Mr. J. Beavington Atkinson delivered a lecture on "Fresco Painting, as applied to the Decoration of Architecture." The lecturer discussed the question from three points of view;—firstly, as to the subjects best suited for mural paintings, whether sacred for churches, historic for national buildings and halls of legislation, or poetic and mythologic for palaces or private dwellings;—secondly, he considered the special styles of pictorial composition, which, by their prescribed severity, symmetry, and dignity, may best comport with architecture;—thirdly, mural painting was treated as a medium of colour, as a means by which construction, without the surrender of its distinctive lines or the confusion of its proportions, may be enhanced in beauty and rendered more emphatic in expression. He suggested that leading academicians might make designs, which should be executed by inferior hands, at a cheap rate, as decorations to churches and public buildings. It was also proposed that Raffaelle's cartoons might be executed in fresco along the naves of country churches: the designs of Flaxman might in like manner be reproduced in fresco on an enlarged scale, and at a comparatively small cost, for concert-rooms and municipal halls.

On Tuesday, the 7th inst., Mr. W. Page Smith delivered a lecture on "Michelangelo, the Artist and the Man." After giving a short sketch of the history of the period in which the great artist flourished, the lecturer proceeded to describe his life and actions, showing what an influence his powerful genius exercised upon the art not only of the time in which he lived, but also of the succeeding periods. The lecture was illustrated by some autographs of Michelangelo. This was the last lecture of the session.

ENGLISH ART IN THE DAYS OF SHAKSPEARE.

PROFESSOR CHAMBERLAIN delivered a lecture on this subject at the Midland Institute, Birmingham, last week. He said there was a national style of architecture in the days of Shakspeare—a style which the whole nation accepted, delighted in, and followed—a style which was not confined to the rich nor to the poor, but one which prevailed in palace building, church building, farm houses, cottages, and so on. Up to that time there always had been a national style of architecture in England: since that period there had been none. This art, as was the case with all art, was distinctly historical,—it expressed certain things in the history of the nation which were not so clearly expressed in any other manner; and by its study it was possible to arrive at a knowledge of the men of that era which could not be gained in any other way. The style itself, as a matter of art, was not perhaps particularly worthy of admiration. It had very many meritorious points, but in itself was a grotesque and semi-barbarous style. In fact, it was a transition style—standing halfway between the abandonment of the old Gothic and the full acceptance of the new Classic, which a very few years afterwards generally prevailed in England, in the houses of the nobility. Elizabethan architecture was an intensified expression of Elizabethan thought, and was entirely unlike anything the world had seen before or since. One of the first things he found in Elizabethan art was its intense individuality. While it thought it was copying it was doing nothing of the kind; and when it thought it was reproducing the vaunted works of the ancients, it was producing something which was then seen in the world for the first time. He thought if we knew nothing about their art, but were only acquainted with their literature, we should say that these Elizabethan men were not likely to be copyists, but to have a will of their own, and to express it in their own way; whilst, if we were without their literature, and had but their art, we should say here were great original thinkers, who, although they thought they were bound to follow out certain forms and figures, yet interspersed them freely with ideas of their own, and in nothing at all would submit patiently to be copyists. While they were attempting throughout their lives to be highly classical—twisting even their language into the classic garb—their real nature was constantly forcing itself through, and the effect was exceedingly grotesque.

COMPETITIONS.

Ipswich Town-hall.—We understand twenty-eight designs have been sent in for the new town-hall, and that the committee have selected one to recommend for adoption by the council.

Chester Town-hall.—The town council have determined on calling in an architect to report on the designs submitted in competition.

HEALTH REPORTS.

THE report on the sanitary condition of Margate, from 1837 to 1862, by Mr. Edward Mottley, is, for various reasons, worthy of careful consideration. The author has gathered together many useful facts in connexion with this town: for instance, the death-rate is compared with that of several other places. In the principal Italian cities, on a seventeen years' average, it is said to be 34 per 1,000 per year, while in Margate the yearly average of deaths during thirteen years 1850 to 1862, including visitors and strangers, many of them invalids, is 21 per 1,000 per annum; but it is said that, deducting the visitors and those residing in hospitals, on fifty years average, the death-rate in Margate, of the residents, is only 16 in the 1,000 per annum, and no doubt this low death-rate may be still further reduced. It appears that in the course of this inquiry the investigators have had ready access to death reports, and other facilities, afforded at the office of the Registrar-General, in Somerset House. The value of these local statistics of life and health is great, and it would be well if many other towns were to follow the example of Margate, and give a correct account of the number of deaths of those who may be fairly considered residents of the localities, and of those who in the search for health have died, and whose name and number stand in the black books at Somerset House, against particular places. No doubt an inquiry of this kind requires very great care, and there is the risk of the desire to make the towns which are reported upon by certain of the inhabitants look as favourable as possible. We do not say that it is so in this instance, but it would be well generally if these local reports could be in some way certified by an unbiassed and undoubted authority connected with the Somerset House registration department.

The value of these local reports on life and health is great, and might with advantage be made in all directions; but at present there is sad want of some system of keeping these so that they can be readily accessible. Take, for instance, the able reports which are issued year after year by the medical officers of the London districts. These ought to be arranged and made easy for the use of persons who desire information on this most important subject; but, when inquiring, not long ago, we found that neither at the Registrar General's office nor in the library of the British Museum is there any compilation or arrangement of publications of this description. Many of these reports, although they contain matter of vast import, are of small size,—thin pamphlets, of two, three, or four pages. At present, if we require a dozen or more of these reports in the British Museum, it is necessary to have the names of the authors, and to write a distinct ticket for each publication. It would be far better to collect these pamphlets, bind them in volumes, and in the catalogue, under the heading of "The Public Health of Great Britain," to let us find "Medical and Sanitary Reports, London;" "Medical and Sanitary Reports, Lancashire," Northumberland, Yorkshire, &c. If this were done it would be of much use, and need not prevent the names of authors from appearing in the usual way; while at the office of the Registrar General there ought to be a classified library available to the use of persons seeking information. Very often this would be of great service, particularly to persons who come from the country for the purpose of obtaining knowledge of these matters.

At Manchester, both in the Free Library and the Mechanic's Institute, care has been taken to arrange the sanitary and health statistics of the town and county; and the same should be done in every important provincial town.

But it is to the general preparation of health reports of towns and particular localities that we would now chiefly direct attention. Generally, the advantage of this would be great, and it would, moreover, be a means of stimulating various towns to renewed sanitary exertions: to places which depend in chief measure on strangers who visit them in the search of health or recreation, it is a matter of pressing consequence; and, when the system of publishing reports such as those referred to becomes customary, Margate will vie with Ramsgate, Brighton with Scarborough, and so on, as to which can show the lowest death-rate; and great will be the satisfaction in those towns which every ten years can effect by right sanitary measures the reduction of deaths per annum in the 1,000.

HALF-TIMBERED HOUSES.

SOME of the half-timbered houses of Old England have been said to resemble specimens of the architecture of the seas. Stage upon stage overlapping the other, they, indeed, seem but to want decks, instead of roofs, to resemble the hulls of ancient ships. There are, however, varieties in their construction which could not bear any such comparison.

As in primitive times, the use of timber in domestic architecture was, of course, due to its abundance. The forests of old, like our present coal-fields, then appeared inexhaustible; and wood was used for every available purpose, including firing. But the day came, as it is heralded in the case of coal, when the scarcity of timber called for substitutes; and new building materials and new fuel were adopted. So plentiful had timber been hitherto, that haybote or heybote, housebote and firebote, were matters taken for granted between a lord and his tenant, although they were terms which conveyed permission to cut in the lord's wood as much timber as the tenant required for firing, to keep his fences in repair, and to uphold his house or tenement. Queen Elizabeth, "of blessed memory," passed a statute forbidding the unnecessary consumption of wood, which, by her time, was beginning to get so scarce as to be sold by the pound in some districts; and the same sign of coming scarcity may be read in the complaint of the Commissioners of Henry VIII. against the Scots, who, they deponed, both by day and night, carried away timber out of Cheviot forest, which was to them "a greate profitte for the maynteinance of their houses and buildynge," and a corresponding loss to the Crown.

We may ascribe the erection of most of our half-timbered houses to the fourteenth, fifteenth, and sixteenth centuries. That this fashion of building was in vogue even before the first-mentioned date we have evidence in the existence of an Early English church in Cheshire, built in the half-timbered manner; and that it extended into the Elizabethan age, despite the growing scarcity of wood, we have an example in the date of the renovations of Little Moreton Hall, in the same county, where, over the great window of

HALF-TIMBERED HOUSES IN MANCHESTER.

the hall, may be read.—"This windows whire made by William Moreton in the year of our Lorde MDLIX.—Richard Dale, carpeder, made this window by the grac' of God." There are few towns that possess more than two or three specimens of this once favourite and always picturesque mode of building; and there are many that cannot point to one. Some counties are richer than others; but none so rich as to be able to afford the loss of these curious relics of the Plantagenet and Lancasterian eras. The resemblance to naval architecture in half-timber houses might be attributed to our insular situation, which might have been expected to have obliged our forefathers to have concentrated much of their energies on ship-building, if our continental neighbours had not also built largely in the same style. Not only France, but Germany and Switzerland, possess numerous and choice examples of ancient half-timbered houses.

In analysing the construction of these edifices we must own the skill with which so much diversity is effected with limited means,—the Saint Andrew's Cross and the lozenge in combination with horizontal and perpendicular lines, arranged in panels and otherwise, being the most varied disposition of the timbers available. The framework, thus composed of solid beams of timber and short joists arranged in the modes indicated, is either filled up with masonry, brick noggings, or plaster. Owing to the narrowness of the thoroughfares, which in its turn was caused by the necessity of economising space in walled towns, the houses would have been very dark if no extra provision had been made to obviate this; but the difficulty was met by glazing as much as possible of the fronts. Hence the front elevation of some of these houses consists of little more than glazed panels. We must also attribute the overhanging floors to the necessity of occupying as little ground-space as possible. Foreign archæologists assign as a reason for their construction the convenience they held out for secret meetings of the burgesses. In the narrow streets, lined on each side with projecting gables, the upper floors nearly touched, and by merely opening the windows meetings could be held by the inhabitants without descending into the thoroughfares. That they were occasionally made use of for such purposes we can easily imagine; but that they were built with that end in view it would be vain to suppose. The small plot of ground originally built upon could by these means be made to afford nearly double the amount of house-room; and as the citizens became opulent we may be sure extra space became a necessity, and they ingeniously availed themselves of the best method of adding to their dignity and comfort. Occasionally the ground-story is found built either of stone or brick, and the superstructure only of half-timber projecting over it. The roofs are found to overhang the façades very much, with the aim of keeping rain and snow from the foundations, and the projection of the stories has the same effect. The materials used for roofing were various: thatch, shingles, slates, lead, and tiles. The latter appear to have been in most favour about the period of Richard I., when the houses in London were ordered to be covered with "brent tile" instead of straw. When not occupying a corner site the sides of the houses consisted of the framework of timbers filled in with rubble to form party-walls. The metropolis, Salisbury, Chester, Worcester, Bristol, Coventry, Shrewsbury, Gloucester, Hereford, Wakefield (in Yorkshire), and Newcastle-upon-Tyne, possess our choicest examples.

Our illustrations of some half-timbered houses of Manchester here given show several peculiarities of the style. One of them suffers considerably from the display of the signs and placards of its tenants; but, divested of these, it will be seen to consist of a quaint gabled structure two stories high, having an intersecting gable end on the return side. But few of these erections are straight, owing to the settling, warping, shrinking, and swelling of the materials; and the cuttings to insert shop fronts and make other modern alterations, do not improve their chances of stability. The more ornamental structure has two large gables and a tower facing the street. The pediments of these gables are filled with quatrefoils, and are surmounted with finials. The two upper stories are treated regularly with an alternate arrangement of panel and window, each panel having two lozenges in it, one above the other, with the exception of that at the left-hand corner, which has a sort of herring-bone disposition of the timbers on both tiers. The ground-floor has been metamorphosed. The barge boards in these examples are not so fully ornamented as in some instances: in Coventry some of them are pierced like lace-work. Neither are there any projecting oriels or wooden brackets, features that are also freely used.

THE FREE CHURCH, KELVINSIDE, GLASGOW.

THE church of which we here give an engraving has recently been erected in the west end of Glasgow, and close to the Botanical Garden, from which spot our view is taken. Its extreme length is 91 feet, its width 57 feet, and the height from floor to ceiling 57 feet. The tower and spire, which form so conspicuous a feature in the side elevation, rise to a height of 180 feet.

The treatment of the design generally is consistent with the locality; and the spire, it will be observed, is square on plan.

From the nature of the site a very extensive underbuilding was required, so that the basement story is as large as the area of the church itself; and one-half has been appropriated as a hall, accommodating from 300 to 400 persons, and allowing of due regard to height and ventilation.

Connected with the church there is also a small hall or sessions-house 27 feet by 17 feet, a vestry, and other apartments. The tower is founded below the level of an old coal waste, which runs under it, by means of iron pillars 40 feet long, resting on the rock below the coal working, being in all about 60 feet below the surface of the ground.

Internally, besides the accommodation afforded by the ground-floor, there are galleries running along the blank space in the aisle walls between the lancets and the wheel windows. The clerestory, which is of Parpend ashlar, is carried on stone arches springing from strong iron columns with foliated capitals. This construction, which has the advantage of interfering but little with the view in any direction, gives an appearance of lightness and airiness to the interior; and at the same time (the nature of the materials being in no way concealed) of perfect stability.

The cost of the whole building, exclusive of tower foundations, was about 7,500*l*. This includes all expenses connected with heating and ventilation; also the encaustic tiles, stained glass, iron and brass work, and the ordinary fittings.

The architects were Messrs. Douglas & Stevenson, of Glasgow; the masons' work having been done by Mr. J. Millingen, and the joiners' work by Mr. T. Nisbet, both also of Glasgow.

THE FREE CHURCH, KELVINSIDE, GLASGOW.—MESSRS. DOUGLAS & STEVENSON, ARCHITECTS.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION.

AT the meeting on May 25th, Mr. T. J. Pettigrew, F.R.S., in the chair, the chairman called attention to a threatened demolition, already alluded to in the *Builder*, of the walls of the ancient castle of Southampton, visited by the Association in 1855. The property has been purchased by a builder, who has expressed his intention of pulling the walls down for building purposes. He is, however, willing, upon the payment of 100*l.*, to allow these ancient historical remains to stand; but the town council, by a letter from the town clerk, addressed to the Association, upon receipt of a remonstrance upon the subject, state that they do not possess any funds which can legally be appropriated to such an object. The mayor and others are disposed to enter into a subscription for the preservation of the walls, if the corporation do not take them under their protection.

Mr. Stevens, of Salisbury, communicated to the treasurer an account of the discovery by Mr. Brown, of flint implements in the drift at Hillhead, near Fareham. There are examples of nearly all the known types, and they are deposited in the Salisbury Museum, where they have been seen by Mr. Evans, Mr. Prestwich, and Sir Charles Lyell. They were all found by Mr. Brown, not purchased of any dealers; so there is no risk of a forgery among them.

Mr. S. Wood exhibited a Roman lamp of the commencement of the Christian era, representing a lion *sejant*. The potter's name reads C. IVNDRA. F. Mr. Wood also exhibited a quart Bellarmine of about A.D. 1600, with the arms of Amsterdam, found in the Thames at All Hallows wharf, in April last. Mr. Wood also exhibited a *Kasher Chotam*, or Seal of Purity, formed of lead, and used to be affixed to animals killed for food for the Jews. The die is stamped with Hebrew characters, the common formulæ of which are, "Sanction of the Ecclesiastical Board of the Holy Congregation" and "Pure for the Zebi," or hart, *i. e.* Israel.

Mr. Irvine exhibited some specimens of early English binding.

The Rev. Mr. Cardew occupied the remainder of the evening by a minute detail of the discovery of an extensive cemetery, generally conceived to be of the Romano-British period, at Helmingham, in Suffolk. The excavations are being continued, and will be visited by the Association at the Ipswich congress, in August next.

WORKING CLASS INDUSTRIAL EXHIBITION.

IT is satisfactory to find that the good example shown at Lambeth in opening an exhibition for the display of the handywork of the industrial classes, is likely to be followed in other parts of the metropolis. As we have already stated, means are being taken for the purpose of opening a working-class industrial exhibition for North London; and we earnestly hope that the experiment will be fairly tried with successful results. But in order to insure this, it is needful that the rules, objects, and other particulars respecting the proposed exhibition, should be extensively made known throughout the district to the class who are likely to become exhibitors. Supposing that an efficient committee, composed of persons anxious to promote the exhibition and intelligent workmen, has been appointed, it would be necessary that on stated evenings, either in one of the school-rooms, or in some other convenient place, there should be attendance given, whereby any one interested may receive information respecting the time and manner of admitting articles, &c. A great difficulty to be dealt with in the first establishment of these exhibitions, is the circulation of a knowledge of the objects in view amongst the immense populations which throng the metropolitan districts, without the expenditure of large sums for advertising. To a certain extent, the difficulties to which we refer might be overcome by the delivery of free lectures given in the National School-rooms on subjects immediately connected with such exhibitions, and showing the advantages of combination amongst workmen for the purpose of mutual information and instruction. In the large manufactories and workshops, by a little good management and without much trouble, the needful information might be communicated to large numbers. The same may be said respecting friendly and other societies, in which many mechanics of various pursuits meet together. Every workman may, by his own exertions, inform many others, and good could be done by those who visit the homes of the industrious community, if they were, when opportunities occurred, to mention the uses of industrial exhibitions.

This is a movement which may not only be the means of improving large numbers of workmen, but also a source of much pleasure to them. The time spent in preparing for the exhibition will keep many a one at home who would otherwise be in a worse place.

To ensure success, we would urge that publicity is essential. If the matter had been more generally known at Lambeth, the number of visitors and exhibitors would have been tenfold.

CIVIL ENGINEERING IN INDIA.

HAVING seen in the *Builder* for April 23rd a letter signed "One of the Victims," complaining of the treatment which the civil engineers sent out by the Court of Directors of the late East-India Company in 1855, have met with from the Madras Government, I think it right, as one of those sent out to the Bombay presidency in the same year, to state my belief that, whatever may have been the case in Madras, the civil engineers sent out to Bengal and Bombay have been fairly treated. They, as well as the Madras men, went out under covenant; and if the conditions of their engagement had not been fulfilled, they would have had their legal remedy; but, so far as I am aware, no disposition was shown to interpret their covenants in an unfair spirit; and I believe I am warranted in stating that those of their number who remain in the service are in the receipt of salaries varying from 50 per cent. to 100 per cent. and more, in excess of the amounts secured to them by their agreement; and several, if not all of them, are in positions of high trust and responsibility. I have had no personal experience of the Madras service, but it is evident that many of the circumstances enumerated by "One of the Victims" as grievances, are no more than any man taking service in India ought to have been prepared to encounter; while the rest are of such a nature, that a temperate and firm representation of them would most likely have obtained their redress at the hands of the Government, unless matters are managed at Madras very differently from other parts of India. But such complaints, circulated without reply, in a journal so influential as the *Builder*, may do harm by deterring young civil engineers of promise from seeking service in India; a country which all who know it must admit to present a large and fair field for the profession. It is the want of skilled agency which in a great measure cramps the Indian Government in the prosecution of public works; and as the resources of the country are developed, the channels of employment for civil engineers will expand.

That the demand is great may be judged from your correspondent's statement as to the employment of corporals of sappers and others without European experience. Such men would not be admitted if others better qualified could be obtained; and surely "One of the Victims" cannot expect to improve his position by lowering his service in the public estimation, and thus keeping out men of a superior class.

A BOMBAY CIVIL ENGINEER.

*** It is right we should state that the complaints made by "One of the Victims" were reiterated by other correspondents.

THE INIQUITY OF SHAMS.

IT has happened as I rather expected, and just as I wished. My "Apology for Shams" (translated into predilection for shams) has brought down upon me the ultra-moral indignation and over-acted morality of "*Ex Stirpe*,"—for whom, by the bye, I have felt what is called a sneaking liking, and have given him credit. I am, it seems, not only apologist, but an advocate for fraud and deceit in art. But surely *fraud* is not exactly the word to be applied to what defrauds no one, and which, if it cheat at all, cheats us of no more than a little pleasurable admiration, when

> "The pleasure surely is as great
> Of being cheated as to cheat."

Scrupulosity in such matters may be carried to a morbid and even ridiculous excess. No one out of a lunatic asylum would speak of another as having his mouth constantly filled with arrant falsehood and lies because he wore false teeth. Should my deception-abominating opponent ever be reduced to the necessity of mounting a wig, it is to be hoped that he will adopt either an episcopal or judicial one, and not a mendacious one *au naturel*;—or, perhaps, he has a wreath of laurels laid up in lavender wherewith to screen out baldness. But it is time to drop this very cheap sort of jocularity.

Materiam superat opus has ever been considered a merit in productions of art: excellence of design, skilfulness of execution, combined with the ineffable witchery of æsthetic effect, can impart a value far exceeding that of the mere money-worth of materials, which may, perhaps, be almost *nil*.

A Greek pickle-vase, which, for its pure eumorphic beauty, seems to have been fashioned by the fingers of the Graces, far surpasses as an embodiment of artistic skill and refined artistic feeling the most costly productions of Sèvres, which latter, supremely costly as they are, are at the same time apt to be more or less at variance with pure and unsophisticated æsthetic feeling.

As one most triumphant instance of what may be done in architecture, though the material employed be no more than stucco in imitation of stone, I may point to that most charming of Barry's structures, replete with genuine artistic originality, and in whose design every touch is grace, namely, the Travellers' Club-house, which, in addition to its æsthetic merits, completely refutes the vulgar notion that buildings which are Italian in character cannot be at all suited to our English climate; which is, by the bye, not a little grossly slandered. One species of Italianism in architecture, indeed, there is, I would strongly deprecate, which is Italian Gothic, and which, as compared with our own, may be called *emasculated*,—an epithet quite as decent as that of *lascivious*, bestowed by Ruskin upon Renaissance.

Returning from these somewhat extraneous and parenthetical remarks, I would humbly submit that there is a very great difference between stucco and stucco,—between materials which, though they go by the same name, are very unlike in quality. Of course, if people will pay only Brummagem price, they cannot reasonably expect the article to be of more than Brummagem quality; but stucco can be produced that shall be quite as sightly and as durable as stone; in fact, more durable than some kinds of stone.

If all that goes by the name of stucco is to be denounced as base imposition, *scagliola* must, I suppose, be put under the same ban. And, again, as to *ashlar*, ought not that to be reprobated as no better than trumpery deceptive veneering of stone,—a sort of enamelling *à la* Madame Rachel, of what, unless so tricked out, would show itself as honest, unsophisticated brickwork?

Here I stop, for the present, with a prayer for "*Ex Stirpe*," that, with his abhorrence of all shams and mockeries, he may never be seduced into the iniquity of not only tolerating, but actually patronizing mock turtle, even when comprised of the most delicious ingredients, and prepared by a most accomplished culinary *artiste*.

ART LOVER.

METROPOLITAN RAILWAYS AND THOROUGHFARES.

As the railway system is being extended in the metropolis, and a great number of Bills for that purpose are before the House of Commons, an opportunity offers itself, which should not be lost sight of, for forming new streets and roads.

The committee of the House has taken a step in the right direction with respect to the proposed railway which is to pass under the Hampstead and Tottenham-court Roads to Charing-cross, and the Thames Embankment, by requiring that a new street be formed over the railway.

This new street will prove an immense boon to the public, and pass through a class of property of a very inferior description, some of it being scarcely fit for habitation.

I doubt not great improvements might be made by the proposed extension of the Metropolitan Railway, now before the committee, towards Tower-hill. The extension westward has passed the committee of the Commons, from Praed-street, in front of the Great Western Hotel, on to Notting-hill, Kensington, and Brompton, as far as Alfred-place, adjoining the Exhibition-road, which road is to be extended to

join the station at Alfred-place. A new road over the railway is to be continued from the end of Prince Albert's-road to the same station; but what are the Kensington vestry about not to try to get a road over the railway from Notting-hill to Brompton, so as to relieve the narrowness and inconvenience of Church-street, &c.?

We have heard much of the want of direct communication between the north and south of Hyde Park and Kensington Gardens; and the discussion in the House of Lords on Monday evening must be for good respecting Park-lane, as something must be done to relieve the traffic there. The subject was taken up by a spirited leader in the *Times* of the 7th inst.; and the proprietors of Hamilton-place must yield to the public necessity, as has been done by the Crown lessees adjoining the Thames Embankment, near Westminster Bridge. The expense of continuing the road from Hamilton-place through the gardens to Park-lane, would be small as compared to the immense advantage to the public.

The nearest accommodation for the public west of Park-lane from north to south is Church-street, Kensington, except that cabs are temporarily allowed across Hyde Park, in the day time, from Queen's Gate to Victoria Gate.

Now, sir, a good road could be formed over the railway, from Notting-hill to High-street, Kensington, and onward to Brompton; and thus the public would be accommodated by road as well as rail, and the railway company would have much better approaches to their stations.

There is a Bill (or Bills) now before the House which is expected to be before the committee in a few days, as it stands in the list with a * before it. By this Bill it is proposed to continue the railway from Brompton across Chelsea and Pimlico, to the Victoria Station, and along the Thames Embankment to the City, so as to complete the inner circle, as recommended by the joint committee of Lords and Commons. The whole of the line is to be underground, so as to leave the level of streets unaltered. This is a good opportunity to effect a great public improvement, as there is now no direct communication from Brompton and South Kensington to Eaton-square and Pimlico.

The proposed noble road from Belgravia direct to South Kensington has been withdrawn from the committee of the House. This road, if carried out, would have been one of the greatest public improvements ever made in the west end of London, as the new road would have been about 120 feet wide, and noble mansions of from 300*l.* to 600*l.* yearly value would have been erected on either side, and there would have been very little house property interfered with, as the road would have passed through the Pavilion and Smith's Charity grounds, the latter being only used as a nursery garden. It is to be hoped this Bill will be re-committed.

Now, sir, by the proposed railway from Brompton through Chelsea and Pimlico an opportunity offers such as never presented itself for making a public road from Alfred-place, where the Brompton station is to be placed, so as to connect South Kensington and Brompton with Sloane-square, Eaton-square, and Pimlico. At present, any one going from Eaton-square towards South Kensington can only do so by a very roundabout way; whereas, a road over the proposed railway would open up the whole district, and greatly improve the property along the line. It would be a great advantage to continue the road on towards Pimlico, but that portion of the road is not so much required, as the streets in that district are more open and direct; but across Chelsea, and from Kensington to Notting-hill, the road accommodation is very indirect and inconvenient. I do hope, sir, some effort will even yet be made to form these roads.

Wherever railways are carried through very thickly-populated districts in London, and the street accommodation is deficient, these roads and streets ought to be formed or widened. Should the proposed road not be formed where the railways pass underground they can never be formed, as the expense would be so very great; but as property must be purchased for the railways to a width of about 40 feet, it would no doubt pay the railway company to purchase the extra land, and let the frontages for building, while a great public good would arise.

I hope I have not taken up your space unnecessarily by the propositions contained in this letter. The matter is somewhat urgent as the bill is expected to be under the consideration of the Committee of the House of Commons immediately.

OCTAVIUS.

A LETTER TO A STUDENT.

* * * * * *

Art thou quite weary? Hath all music fled?
Have art-love's traces perish'd from thy soul?
All voices silent? From the mighty dead
Past triumphs speak not and no echoes roll
To cheer thy faint heart as thy footsteps tread
The narrow path straight leading to the goal.
The path the masters hough'd in times of yore,
When saints and martyrs for their causes shed,
With joy unequall'd but in saintly lore,
The blood which hallow'd them awhilst they bled;
Leaving their mem'ries bright, for evermore
To echo like sweet music, spirit-led,
From heart to heart and blissful shore to shore;
Bidding its pow'r restore each dimmèd eye and throbbing head.

"I'm sad and weary." Well, I doubt it not,
How many aching hearts live like to thee!
Who ache and yearn for that they know not what,
Or ache because of immortality:
Which some men mock at, since it is not got
Like grapes from vines, or berries from a tree;
Whose coarser natures will not daily fight
Existing elements that disagree;—
The word of wrong—the heav'n of holy right;
Man's smallness and immensity;
The world of darkness and the world of light;
The moral slave and the immoral free;
The careless blind, and those who, bless'd with sight,
Have minds that cannot, or that will not, see!

I say 'tis well, and wert thou thrice as sad
I'd deem it not a sadness earnèd ill
So it but tend to make the future glad,
And prove thy soul the master of thy will!
For well I know the time is drawing near
When, in the magic of a moment's breath,
The rolling world shall glide without its sphere,
And rosy Life from all decaying death
Claim from each soul the actions of its will,
To smile on those that save—to weep o'er those that kill!
So if thy sadness doth but make thee wise,
To hate all else and hold to ev'ry good,
A burst of song shall herald out thy sighs,
Teaching thee things to prize which thou once misunderstood!

I do believe thy sadness rather comes
From pale humility than envy's rank disgust.
"For I have fail'd!"—ay, all essayists must;
And failure, making humble, oft benumbs
A mind with true and genuine feeling in it,
Until it gains its strength to stand, alone,
And, in its fight for an imperial throne,
Calm, in its power to enter in and win it;
Engaging steel-clad enemies at odds,
Despite meu's malice or malignant gods!
Give me the man who, in his calm of mind,
Survives defeat and smiles on Fortune's frown;
Who, great, can weep; severe, be ever kind;
Rocks may dissolve, but never his renown.

"Others have wrought—and won; but I shall not."
Here follows such a blot
Upon the crumpled mis-directed letter,
Fame gain'd so blacken'd would be ill begot.
Mend up an old pen, or else buy a better.
Show me such heedlessness to brush or pen,
And I'll discern an index to thy life;
For carelessness is not the fault of men
Who buckle on their armour for a strife
When Honour,—Fortune the result abide;
They'll have their corslets and their spear-shafts tried
Most carefully by an approvèd test,
Holding, as warriors should, to what is best;
And deeming Fortune kindest when the beldame is caress'd!

"But I shall not." I pray thee always say so,
But working, striving, working, for to win;
And working quick, not slow and void of spirit,
Upon the circumstance thou once begin.
Yet working humbly, very humbly, too; as though
Thou durst not hope for praise on score of merit,
Or that each figure has a certain price,
Like some tame pack of white performing mice.
I'd have thee work, like shepherds in a grove,
Sung of by Virgil in his past'ral lays,
Who deem'd their fates were but to live and love,
And, loving, end their troubles and their days!
Content, in gaining approbation stately
From one, or two, or three, they valued greatly.

"I'm sad; I'm tired." Why so have others been,
And wouldst thou sleep? Perchance the time is nigh
When we should rise to gaze upon a scene
Ungiven yet to any mortal eye.
I do not mean, precisely, we may die;
But by due exercise the mind can make
A world its own, where it may revel in
Untainted by the venal'ties of sin.
All tire at night, yet, ere the morning break,
We must be strong and ready to awake,
And seize the light and crush the day our own,
Without a sigh, much less a thorough groan.
Take exercise, and cheerfully,—thy sadness
Will yield to ruddy mirth like clouds to Sol's soft gladness!

I tell thee there are secrets by which life
Were robb'd of many a pang if all but knew
How to form angels from each shrewish wife,
Or raise rose-gardens where the thistles grew.
Untie thy knots—I pray thee save that knife,—
Let many precepts rule thee, not a few;
Use calm persuasion, not immoral steel,
To bring thy difficulties to an end.
If pride fret stubborn for a place, go kneel,
And rise not mindless,—unresolved. Amend:
Seek not two meanings or a double end:
Straightforward be and pure in thy intents,
And let Philosophy mean this,—"Be true;
Prepared for any, firmly meet events."

C. G. S.

CHURCH-BUILDING NEWS.

Great Hautbois (*Norfolk*).—The new church at Great Hautbois has been consecrated. The necessity for the erection of the new edifice arose from the dilapidated and even dangerous condition of the old church. The new edifice is built on a plot of ground immediately adjoining the house of the rector of the parish, and only a short distance from the schools. The architectural character of the edifice is derived from the style prevalent at the latter part of the thirteenth century. The architect was Mr. Jeckyll the designer of the Norwich gates. The church consists of a nave, north and south aisles, and chancel, opening into which is an organ chamber and vestry. Accommodation is provided on open benches, for 250 adults and children; but an additional number of fifty can be seated on chairs when required. The nave is without clerestory, being lighted from the west end only, and the roof is formed after the waggon-head principle, and panelled. The chancel roof is boarded and panelled; and, with the rest of the roofs, is, as soon as the work is sufficiently set, to be painted gray and diapered. The plastering of all the walls is also prepared for polychromatic decoration. The church is constructed in a similar manner to the old one, with freestone doorways, windows, and columns, and with brick arches in the arcades and openings; the whole of the brickwork being plastered over. The floors are laid with Staffordshire tiles and the chancel with Minton's tiles. The glazing of the church is of thick rough glass bands of two tints, and in small square panes. The east windows are already filled with stained glass. Provision is made for heating the church by one of Gidney's underground stoves. The cost of the church, seated with chairs, amounts to upwards of 800*l.*

Sunninghill.—All Saints' Church, Ascot Heath, has been consecrated by the Bishop of Oxford. The church is situate in the consolidated chapelry of Cranbourne St. Peter. The site is on land given by the Crown, adjoining the turnpike-road leading from Staines to Wokingham, and close to the new Royal Hotel, on Ascot Heath. It has been erected from designs by Mr. T. H. Rushforth, of London, by Mr. J. Norris, of Winkfield. The building is a remarkably plain and unpretending structure, of dark red brick, with Bath stone dressings. It consists essentially of a nave and chancel with south aisle, and is fitted throughout with open benches of varnished pine. The church has no spire or tower, but simply a bell-turret. The building will hold about 260 persons, and 190 sittings will be free. There is a three-light east window of stained glass, put up by the Misses Greville, of Inglemere Wood, and executed by Messrs. Lavers & Barraud. The cost has been about 2,100*l.*

Milton Abbas.—The ancient church of Milton Abbas is in course of restoration under the direction of Mr. Scott. The tenders were limited to a few firms, and the contract was obtained by Mr. Wellspring, of Dorchester, builder, who is carrying out the works under the personal superintendence of Mr. Yeoman, as clerk of the works, from the establishment of Mr. Scott. The stonework is already in a forward state, though considerable difficulty has been experienced, from its having been found necessary to underpin many of the exterior buttresses, and one of the principal tower piers, where there had been a settlement, owing, it is said, to the construction of the vault of the Damers, who lie here in the north transept. The exterior roofs have been thoroughly restored and re-covered with milled lead. There are evidences of where the cloisters communicated with the domestic portions of the abbey, and also with the lady chapel immediately behind the chancel. At the western end, just under the tower, a porch is being erected, in keeping with the other parts of the building; and several of the traceried windows which had been blocked up are now again opened. The groined roof of the whole building is nearly completed. It is composed of rock chalk, with ribs of Ham Hill stone.

Worcester.—Sir E. A. H. Lechmere, Bart., in addition to his former donation of 100*l.* for the general restoration, has given 150*l.* towards restoring the Norman arch lately discovered at the west end of the Cathedral, and supposed to belong to Bishop Wulstan's structure. The subscriptions, including 509*l.* recently contributed at the Warwick meeting, now amount to 14,978*l.* 14*s.*

Emery Down (*New Forest*).—A new church has been opened here, in the very heart of the New Forest. Admiral Boultbee has built this

church at a cost of about 1,300*l.*, and endowed with with 1,700*l.* The church, which has been built by Messrs. Hillary, of Andover, from designs by Mr. Butterfield, of London, consists of a nave, organ-chamber, vestry, and north porch. A bell-cot terminates the western gable; and the roof, which is high pitched, is open arched, with stained deals. The sittings, in open stained deal benches, number about 170. Forest bricks have been employed, with Bath stone dressings. The walls internally are stuccoed, but in the chancel above the stone the bricks are worked in diapered patterns, banded by coloured bricks. The pavement of the nave is of red and black square tiles, but in the chancel Minton's encaustic tiles, interspersed with ecclesiastic patterns, have been used, and these have also been employed, with Bath stone, in the communion recess and the reredos.

Preston.—The chief stone of Christ Church, Fulwood, Preston, has been laid. The new edifice will cost about 2,200*l.*; and already 1,750*l.* have been subscribed and promised. The edifice will be built entirely of stone; and will be capable of accommodating 430 persons, 140 of the sittings free. The architects are Messrs. Myres & Veevers, of Preston. The new edifice will be constructed entirely of stone, that for the walls from the Roddlesworth quarries, and the dressings from Longridge. The church has a spire, on the northern side, 102 feet high to the top of the masonry. In this there is a large single bell turret, octagonal in shape, and standing over the principal entrance, and the spot to be set apart as the staircase of the gallery. This gallery, however, will not be erected until all the other complements are provided. The church will consist of a main building, 70 feet long, 36 feet wide, and 46 feet high to the pitch of the roof, the seats being approached by a nave and two side aisles. There will be no pillars in the building. The chancel and choir will measure 23 feet by 18 feet, on the north side of which will be the vestry, and on the south an organ chamber. The floor of the chancel will be paved with 6-inch quarries and encaustic tiles. The side windows have each two lights, and the eastern and western ends have each five lights, surmounted by a circular light, with circular perforations. The roof will be open to the slating, and the principals will be filled in with light iron tracery between the spandrels, this being relieved with gold and colours, which will somewhat lighten and give effect to what otherwise would have been a sombre and dark roof. Inside the walls will be plastered, and stone finished, the arches joining the chancel with the church being of mouldings sunk in Bath stone.

STAINED GLASS.

Worcester College Chapel, Oxford.—Six of seven windows to be restored have been given by special donations. These windows will cost 115*l.* each, and one of them is the gift of the Rev. Dr. Collis, in addition to a donation of 100*l.*, which he subscribes towards the general restoration. The designs for the windows will be furnished by Mr. G. E. Millais, R.A., to be executed by Messrs. Lavers & Barraud.

St. George's, Kidderminster.—Some time ago the congregation of St. George's Church determined to fill the east window with stained glass; and, subscriptions having been obtained, Messrs. O'Connor, of London, produced designs, and the work is now completed. The window is a rose, and the treatment of the design presented considerable difficulty, the artists having to work out an idea in connexion with the dedication of the church rather than to produce a mere kaleidoscopic effect. The leading feature embodied is the Cross receiving the veneration of the angelic host. It springs from the centre point of the rose, where it is embraced by the Latin title of the Crucifixion and by the crown of thorns. It is then carried through to the extreme of the circle in all the openings, and occupies eight out of sixteen main lights. Between the four limbs of the Cross, the design is formed of lilies springing from the crown of thorns and winding up to the angels of the heavenly choir, holding scrolls and playing upon musical instruments. The whole wheel consists of 128 separate openings, and is about 48 feet in circumference, its diameter being a trifle over 15 feet, and its contents about 180 square feet of glass.

Gloucester Cathedral.—Some months ago the ancient stained glass of the clerestory of the south transept of this cathedral was removed, preparatory to its being cleaned and re-arranged by Messrs. Hardman, of Birmingham. It has now been replaced, the stonework of the windows having in the interval also been repaired. The upper lights are filled with a design representing the vine, in white and yellow, on a ruby ground; and the lower lights are composed of the ancient quarries, with coloured borders. Workmen have been engaged in taking the measurement of the two large windows at the west end of the south aisle, preparatory to the erection of the Jenner and Elliott memorials, which, it is expected, will be completed by the end of October. The execution of the Elliott memorial has been entrusted to Messrs. Hardman, and the glass for the Jenner window to Messrs. Clayton & Bell.

Gwennap Church.—Some ladies bearing the name of "Mary," undertook last year to collect donations from or in memory of their friends of the same name (under its various forms) for the purpose of restoring one of the windows in Gwennap parish church. So successful have they been that the unsightly framed window at the east end of the south aisle has been replaced by a perpendicular window executed in granite by Messrs. Freeman, after designs by Mr. James Piers St. Aubyn. The central light and tracery openings are filled with painted glass, by Messrs. Lavers & Barraud, representing in the former Our Saviour addressing from the Cross His last words to His mother. The upper lights are filled with angels, Mary the wife of Cleophas, and Mary the sister of Lazarus. The whole cost, including fixing, has amounted to 42*l.* 9s. 7d. It is hoped that the side lights may through further offerings be filled with suitable subjects to correspond with the central light.

RAILWAY COMPANIES TAKING PORTIONS OF PREMISES.

In the Court of Chancery, before Vice-Chancellor Wood, the case of Medland *v.* Horsham and Guildford Direct Railway Company has been decided. Defendants having served notice upon plaintiff, a manufacturing chemist, that they required a portion of the land occupied by his manufactory, he served them with a counter-notice that they must take either the whole or none of his land and buildings. His land is 2½ acres in extent, and part of it is agricultural land. The defendants refused to take the whole of the premises; and as they continued to insist on taking only such portion as they wanted, the plaintiff instituted this suit to restrain them from doing so, and to obtain a declaration that if they took any portion they were bound under the Lands Clauses Consolidation Act to take the whole.

The Vice-chancellor made a decree to the effect that the defendants were not entitled to require the plaintiff to sell that portion of his property which was described in their notice without at the same time taking the whole of his manufactory; that such buildings and land as were essential to the carrying on of his manufacture formed part of the manufactory, and ought to be taken by the defendants; but that the dwelling-house of the overseer and the gardens and clay bank did not form part of the manufactory.

THE STAGE.

Royal Italian Opera.—The critics of the daily press have been pretty unanimous in speaking ill of the music of "Stradella," and in the warmest terms of praise of the scenery and stage arrangements. In the latter part of their verdict we go with them fully: the scenery, in Venice and Rome, is charming; the groupings are excellent. But in respect of the music we plead guilty to finding it very fresh and agreeable: though it may not be quite up to the Covent Garden standard. As sung on Monday night by Mdlle. Battu and Messrs. Naudin, Ronconi, and Ciampi, it fully held the attention of the house from beginning to end. On Tuesday evening Mdlle. Patti achieved a great success in the part of *Margherita* in "Faust," the acting and singing being equally irreproachable. The scenery is amongst the best efforts of Mr. W. Beverley.

Princess's Theatre.—Some short time ago, under the heading "The Drama in the Drawing-room," we mentioned an original play by Mr. Angiolo Slous, entitled "Light and Shadow," and commended it to the attention of theatrical managers. *Post hoc* if not *propter hoc*, Mr. George Vining has produced it at his theatre, where, with less aid, on the score of acting, than it might have had, it has achieved great success. Mr. Dominick Murray, who acts the principal character, the hunchback *Pierre la Croche*, displayed great discrimination and intelligence, and has advanced himself considerably in estimation by the personation; and Mr. David Fisher in the part of *Jacques Sabot, Pierre's* attached friend, and not deserted by him in his after-prosperity, has a part that suits him well, and plays it vigorously. Nevertheless, the play is under-acted. The piece is exceedingly well written,—has not a bad part in it,—and excites the genuine interest of the house.

Books Received.

A Shakspeare Memorial. Beeton, Strand.

THIS is an extraordinary eighteen-pennyworth, comprising forty-eight large folio pages, and no less than sixty-eight engravings, many of them full-page (one chromo-lithographed) and half-page ones, and not a few of them of original design by known and competent artists. The letter-press, we see no reason to avoid saying, is by Miss Rogers, whose interesting and gracefully-written work on her personal experiences in Syria we have already noticed in the *Builder*. The last seven pages were written by a friend of hers, the daughter of a man of well-known name. Many of the drawings were sketched at Stratford by Mr. Danby. The frontispiece is an ornamental composition by Mr. W. H. Rogers, containing copies of all the more celebrated portraits of Shakspeare; and there is a folio page of portraits of the sovereigns, contemporaries, biographers, editors, commentators, players, and illustrators of Shakspeare. Several of the engravings are very well executed by Mr. Sheeres. Altogether the work is a good one. The letter-press, of course, tells us of Shakspeare and his times, his associates and contemporaries, his works and their various issues, his imaginative characters, &c., &c.; the whole woven together into a pleasant narrative.

Miss Rogers speaks very decidedly, in an adverse sense, as to Mr. Collier's much talked-of book, which he purchased from the deceased Mr. Thomas Rodd, a zealous illustrator of Shakspeare, for thirty shillings,—a very unlikely price to be put upon it by Mr. Rodd, as Miss Rogers thinks, if it were *then* full of the manuscript corrections which have since excited so much criticism. Miss Rogers is of opinion that in that case Mr. Rodd would have rather passed it to the national library. The "true copies" of documents "discovered" by Mr. Collier in the Bridgewater House library, and introduced into his "Life of Shakspeare," Miss Rogers speaks of "as undoubtedly utterly fictitious, but very ingenious."

VARIORUM.

"THE Patent Question under Free Trade; with Translations of Contributions to Patent Reform by M. Chevalier and other Continental Economists. Johnson, Fleet-street." This pamphlet consists chiefly of a paper submitted to the Social Science Association, at Edinburgh, by Mr. R. A. Macfie, president of the Liverpool Chamber of Commerce. It proposes a solution of difficulties by abolishing or shortening the inventors' monopoly, and instituting national recompenses.——"A Chapter on Street Nuisances. By Charles Babbage, Esq. Murray, Albemarle-street." Mr. Babbage, according to his own account of it, lives in a low neighbourhood, amongst "the lowest mob," who love street music, which he has for many years determined they shall not quietly enjoy, because it disturbs him in his interminable labours at the long-looked-for calculating-machine, of which the last generation of Englishmen heard so much at the time, but at length lost sight of, and entirely forgot, until the organ-grinders revived a recollection of it from the limbo of Mr. Babbage's low neighbourhood. Why does not Mr. Babbage remove out of such a neighbourhood rather than submit for years to the vulgar but very natural retaliation to which his persistent annoyance of his music-loving neighbours has so long exposed him? Street music is very much disliked and run down by many; but it could scarcely be so greatly on the increase as Mr. Babbage alleges it is, unless a large proportion of the public in the neighbourhoods where it prevails were favourable to it and enjoyed it.——The current number of the *Social Science Review* is a good one. The chapter on "Diseases of Overworked Men" relates to what the writer considers the evils of too early artificial education, and is a strongly-written protest against the injury thus done to the rising generation. The poor little bright things become incapable men and women, or die off in their youth; the consolation being the expression—"Whom the Gods love die young."

"If there is one thing more than another," says the writer, "for which I would like to go back into antiquity, it would be to drag out by the throat, for public scorn, that miscreant who wrote the poetical falsehood "Whom the gods love die young." Fool! defiant of all human interests, thou hast lied, whoever thou art; lied in the teeth of living daily evidence; for whom the gods love die *old*; neither know they aught of the bitterness of death.

They do not die; they are the true beloved; and he who loveth them giveth them *sleep*."

——*Fraser's Magazine* reviews in the right tone the "Commissioners' Report on the Sanitary State of the Army in India." This cannot be too often done. The evils of the Indian barracks still existing cannot be too often pointed to and denounced until further improvements have been effected. —— The *Art-Journal* contains, with its usual numerous illustrations and essays, long notices of the Royal Academy Exhibition, those of the two Water-Colour Societies, and at the Flemish and French Gallery. The writer of the Royal Academy notice agrees with the other critics who think the Exhibition above the average. We adhere, however, to our already expressed opinion that it is not so; and would prove the correctness of it by comparing what each leading man who exhibits in it has there, with what he had sent on another year. In "Art-Work in June," the Rev. J. G. Wood points out some of the absurd mistakes made by even eminent artists in the delineation of insects and other natural objects.

Miscellanea.

EARL GROSVENOR'S ESTATE.—Lord Grosvenor, with the view of obtaining the best design for houses intended to be erected in Grosvenor-place, and otherwise improving the estate, invited a certain number of architects to submit such designs in competition, giving each a fee of 100*l*. Designs have accordingly been sent in by Messrs. E. Barry, Cundy, Garling, R. Kerr, and Street.

BRITISH INSTITUTION.—The collections here of works of old masters and deceased British masters are always interesting and delightful, but necessarily differ in degree. On the present occasion, the exhibition is less rich in supereminently fine foreign pictures than is sometimes the case; but Reynolds, Romney, and Gainsborough make up for the want of them in the department of portraiture.

TRAFALGAR SQUARE.—Several of the newspapers have announced that a new equestrian statue of King George IV. has just been placed on the pedestal at the north-east corner of Trafalgar-square. It is being bronzed, they go on to say, and will be ready for uncovering in the course of a few days. Every Londoner should know that the statue has been there many years. It has simply been treated with the new bronzing process; which, by the way, is not quite so satisfactory to us as it seems to be to the "authorities."

PHOTOGRAPHIC SOCIETY.—The exhibition made by this society, now open in the Gallery of the Society of Female Artists, Pall-mall, is less striking than former displays have been; chiefly because advances in the art are now made more slowly than was the case at first. It consists of 267 specimens, and many of them are of great beauty. Mr. H. P. Robinson, Major Gresley, Mr. T. Annan, and Viscountess Hawarden, send some of the best. Messrs. Hennah & Kent, whom, according to their own statement, three lines in the *Builder* years ago first brought into profitable prominence, still keep ahead in portraiture of many of their contemporaries.

MR. S. C. HALL ON THE ILLUSTRIOUS MEN AND WOMEN OF THE AGE.—On Saturday, the 4th, Mr. S. C. Hall delivered his lecture, entitled "Memories from Personal Acquaintance of the most Illustrious Men and Women of the Age," at the Vestry Hall, High-street, Kensington, for the benefit of the Kensington Industrial School for Teaching and Preparing Young Girls for Service. A crowded and fashionable audience attended on the occasion. The Venerable Archdeacon Sinclair, vicar, presided, and in a few appropriate remarks introduced Mr. Hall, who was received with much applause. Mr. Hall's lecture, and the happy, entertaining vein in which it was delivered, are already favourably known, it having been given on a few occasions in London and elsewhere, and having elicited very flattering comments from the London press. Last Saturday, Mr. Hall seemed to enter into his subject with even more than his usual ardour, and was evidently much at home amongst the attentive and appreciative company by whom he was surrounded. An enthusiastic vote of thanks rewarded the lecturer for the literary feast he had laid before his audience. He was never more successful.

CHELTENHAM WATER-WORKS.—Mr. W. M'Landsborough, Assoc. Inst. C.E., Gloucester, has been appointed manager to the Cheltenham Water Works Company. There were about sixty candidates. The salary is 400*l*. per annum.

ECCLESIOLOGICAL SOCIETY.—At the twenty-fifth anniversary meeting, to be held on June 22nd, in the Lecture Theatre of the South Kensington Museum, a discussion will be held on the plan and construction of town churches both artistically and practically considered.

LARGE FIREPROOF SAFE.—One of the largest safes constructed has just been completed by Messrs. Chubb & Son, of St. Paul's Churchyard, for an Indian bank. It is 14 feet long, 10 feet deep, and 8 feet high, and is of the enormous weight of 17 tons. Small cash safes, secured by detector locks, are fitted to the interior, and the outer doors are fastened by four locks, throwing twenty-seven bolts.

THE GREEN AT WEST COWES. — A favourite promenade at West Cowes, called the Green, has been purchased for the town by Mr. George Robt. Stephenson, the nephew of the late George Stephenson, at a cost of 300*l*.; and has been opened as a place of recreation after a further expenditure on it of several hundred pounds by the same gentleman, who also employed his yacht's crew during the winter in levelling the ground and making paths. A sea-wall has been constructed with a tooled Purbeck coping, and a drinking-fountain and band-stand erected. The Green has now been opened with local rejoicings.

GREAT CROSBY LOCAL BOARD. — Mr. Alfred Taylor, C.E., surveyor to the Board, having delivered to the Board the plans of the district, comprising one general map on the scale of 2 feet to the mile, containing some 2,000 acres, also detail plans of the built portion on the scale of 10 feet to the mile, the following resolution was proposed by Mr. James Heyes, seconded by Mr. Barnes, and resolved unanimously: "That a minute be entered on the books acknowledging the receipt of the plans of the district, completed by Mr. Alfred Taylor, and that the Board record their appreciation of the perfect and finished manner in which the plans have been executed, reflecting the highest credit on the surveyor."

THE METROPOLITAN SUBWAY BILL.—At the usual weekly meeting of the Metropolitan Board of Works, the chairman informed the Board that the committee of the House of Commons had struck out of the Subways Bill the clause giving the Board those compulsory powers it had sought over the gas companies, and he wished to know whether or not the bill should now be proceeded with. He said the committee had agreed to give the Board power over the water and telegraph companies; but, as the gas companies obstructed the streets more than the others, the great purpose of the Bill would be lost, and it would be better, in his opinion, to withdraw the measure and wait for public opinion to ripen upon the subject than to proceed further this session. After some discussion it was resolved to withdraw the bill. The gas companies, it seems, did not so much object to putting their pipes in the subways as they did to paying for the accommodation. The majority for withdrawal was 24 to 5.

GAS.—The Rugby Gas Company's directors propose a dividend for the year on shares of the different classes amounting to 15 per cent., and that 200*l*. stock be added to the reserve fund; also that the price of gas be reduced to private consumers from 4s. 7d. to 4s. 2d. per thousand feet, with a discount of 5 per cent. for payment within a month from quarter-day; that the price for lighting the public lamps after September next be reduced from 58s. to 54s.; and that the price of gas to the railway companies be reduced from 3s. 6d. to 3s. 3d. per thousand feet.——The town of Wilna is to be lighted with gas from pine-wood. The basins will contain 60,000 cubic feet of water. The gasometer, of cast iron, will be of the same capacity. The plan exhibits three distinct edifices for the distillation of gas, its purification, and distribution. Forty-nine towns in Germany, Hungary, Italy, and Switzerland, and quite lately Helsingfors, owe their lighting to gas distilled from wood or jutesal.——Near Scranton, Pennsylvania, there is said to be a place where natural gas, in large quantities, exudes from the rocks. It has been proposed to gather this gas in holders, and supply the town. The town of Fredonia, N.Y., derives its entire supply of gas from this source, and it is said to give great satisfaction.

NOTRE DAME.—This famous old cathedral, t metropolitan church of Paris, has at last be consecrated. Its foundation-stone was laid 5 years ago, upon the site of an old chapel sa to have been founded by Chilperic, but, as ma of our readers must know, it has never been ar is not even yet finished.

MINSTER CHURCH (THANET).—When the r storations and alterations were completed, bulging of the walls and buttresses of the churc was noticed, and statements were made of the unsafe condition. Props have been placed again both sides of the walls. The chancel belongs t the Dean and Chapter of Canterbury, or rathe the authorities took Alland Grange and its tith about 764 years ago, with the conditions c keeping and maintaining the chancel in a fit an proper state. The value now is about 1,200*l*. pe annum.

BRIDGWATER NEW TOWN HALL.—A difficult has arisen between the builder, Mr. Shewbrooks of Taunton, and the authorities, which ha checked the progress of this building. It appear that before Mr. Shewbrooks tendered he engaged Mr. Knowles, the borough architect, to give hin the measurements, &c., of the plans; and in the tender which Mr. Shewbrooks sent in he relied upon, and calculated according to, the figures supplied him by Mr. Knowles. It turns out however, it is said, that there is a great quantity more masonry in the walls than Mr. Knowles stated there would be; the value of the differ ence being 116*l*. odd; and Mr. Shewbrooks ex pressed his intention of not proceeding until he should know who was to pay him this sum. The Building Committee of the town council resolved to forward the work at Mr. Shewbrooks's cost if he did not proceed with it. Mr. Shewbrooks threw up his contract, and the Corporation will have to invite fresh tenders for the completion of the work.

RE-OPENING OF THE BLACK-ABBEY CHURCH, KILKENNY.—After a lapse of three centuries, this church has been again brought into use. It was built in the year 1225 by William Marshall, Earl of Pembroke, the grandson of Strongbow. Of this monastic institution nothing remained a few years since but the transept and west aisle, the west tower, and the arcade which formerly separated the nave from the southern aisle: the choir and convent buildings had altogether disappeared. Five years ago it was determined to restore the nave, which has accordingly been done by Mr. J. J. M'Carthy, to whom the work of restoration was confided. On excavating the foundation the ancient walls were discovered, and on them the new walls were built. The north side of the nave now contains four decorated tracery windows in keeping with those of the south transept. The south aisle is lighted by two two-light windows. The roof of the restored nave and aisle is of open timber-work. These restorations were effected by the Brothers of St. Dominick, who, for the last fifty years, contrived to celebrate the offices of religion in the old transept.

THE JUNCTION-ROAD OUT-FALL AT BRIGHTON.—The Junction-road Outfall, which receives the main sewage of the town, has been lengthened by 300 feet. This length of piping had been previously joined together on the higher part of the beach in front of the Chain Pier Esplanade. The piping weighed 60 tons. Messrs. Aird & Son, the contractors, and Mr. Lockwood, the borough surveyor, were, of course, upon the spot, with a large force of workmen. The beach being an inclined plane down to the sea, the huge mass would have descended by its own weight over the planking prepared for its passage to the sea. But it was necessary to regulate and guide its descent; and this was effected by means of several windlasses fixed on the beach, and which held the piping by strong ropes. No joint of the 300 feet, it is said, was strained. It was then towed to the bed prepared for it at the extremity of the piping laid last year, and sunk to its destined resting-place. Divers were employed in this. An escape had to be found for the air in the piping, and this was effected by means of tubes coming to the surface, whilst the water was let in by the removal of screw-plugs. The piping was thus safely lowered into its exact position, without a flaw, and joined to the end of the out-fall. There are now 900 feet of the out-fall laid down, and 850 feet remain to be laid. This, we understand, will be done in three more lengths. So far as can be ascertained by a partial operation, the experiment of this out-fall, in taking the sewage of the town out into deep water, is said to have been quite successful.

ANCHESTER CITY CROSS.—The restoration and
ir of this ancient "High Cross" seem to be
mpletely forgotten affair, says a Hampshire
r, for many months have now elapsed since
caffolding was put up round it, and there
o appearances of a commencement of opera-
. It recommends that the scaffolding should
ainted and the fastenings renewed.

LL OF A HOUSE FRONT IN MANCHESTER.—
ome time the upper part of the frontage of
ises in St. Ann's-square, has been observed
in a very dangerous condition, and it was
ved a few weeks ago to take down the
and rebuild it. It was shored up and
olding erected by Mr. Robert Neill, builder,
ngeways. The wall, however, has fallen;
o one was hurt.

LL OF AN AUCTION ROOM.—A serious acci-
lately occurred during the holding of an
ion sale, on the premises of a builder, at
on, near Hull. The floor gave way, pre-
ating the company, about sixty in number,
e lowest story, a distance of 9 feet. Seven-
persons were more or less injured. The
rs, which were very thick, were riven in two
match-wood, and three heavy tool-chests,
with the floor, but fortunately without
ing any one.

E ARTISTS' BENEVOLENT FUND.—The annual
er of this institution was held on Saturday
t, at the Freemasons' Tavern, under the
idency of Lord Fermoy. The company in-
ed Sir C. Eastlake, president of the Royal
demy, and about 100 artists, supporters and
ds of the association. During the past year
society has paid to fifty widows 750*l.*, and
orphans have received 45*l.* The income
g the year was nearly 1,400*l.*, and the ex-
iture about 1,000*l.* Since the formation of
fund, the sum of 25,516*l.* has been dis-
ted in relieving the widows and orphans of
sh artists.

PENING OF A NEW RAILWAY AT LIVERPOOL.
r a long delay, all obstacles to a continuous
ic on the new railway between Liverpool
Garston have been removed, and the line
been opened. It runs from the bottom of
humberland-street, Brunswick Dock, to Gar-
, and serves as a connecting link between
south end of Liverpool and the Manchester,
ffield, and Great Northern route to London.
three miles and three quarters in length.
Liverpool extremity terminates in a goods
on, 400 feet in length and 300 feet in breadth.
several platforms are free from the usual
umbrances of machinery, as the traffic is
nged by steam cranes worked by shafting in
els underneath the ground-floor of the sta-
. Mr. Brydone, the engineer of the line, has
ontrived, that the circular cranes shall be
ended from the warehouse ceiling. Thus
cranes have no pillar.

TATION IMPROVEMENTS AT MANCHESTER.—Ex-
ive alterations are in progress at the Victoria
en, Manchester, involving an outlay of
000*l.* The improvements comprise a series
t girders across the Irwell, by the south side
he present bridge, and a continuance of the
form along them to the Salford side of the
. The length of this platform, which will be
red, will be about 300 feet, and its average
h about 18 feet. The whole platform will
be more than 1,000 feet in length. The
ractors are, for girder-bridges, Fairbairn's
ineering Company; Messrs. Walter Mabon
). for new roofs of Lancashire and Yorkshire
pany; and for the remainder of the work,
ading fish market, Mr. R. Neill, Strangeways.

TILIZATION OF THE METROPOLITAN SEWAGE.—
Select Committee of the Commons has had
ier evidence brought before it on this subject.
West, of the firm of West & Sons, engineers,
examined as to cost of pumping sewage,
mud, or clay. Mr. Cuthbert Johnson, chair-
of the local board at Croydon, gave evidence
o the advantage of irrigation. He stated
when the sewage ran into the river they
ained a loss of 10,000*l.* in legal expenses, and
it was passed over the land they were at no
nse, and received a sum of 240*l.* a year in
nution of the rates. They were unfortunately
down to a fixed price, or the ratepayers
ld have a still greater advantage. Mr.
kins, of Redruth, in Cornwall, engineer, was
mined as to pumping-engines, and Mr.
nas Ellis was re-examined. He estimated
total value of the metropolitan sewage at
a ton, or upwards of 2,100,000*l.* in all.

PUBLIC PARKS FOR LIVERPOOL.—The Liverpool town council have before them three proposals for the formation of a public park for the borough. The cost of the first is put down at 58,000*l.*, of the second 117,000*l.*, and of the last 230,000*l.* The general opinion is said to be in favour of the most costly.

NEW SCHOOLS, HOLY TRINITY DISTRICT, HOXTON.—These schools, of which we gave a view not long since, were opened a few days ago by the Bishop of London. The schools contain 640 children according to the council regulations, but on an emergency 700 might be accommodated. The architect was Mr. Ashpitel. When the bishop was about to leave the building the architect pointed out to his lordship the drinking-fountain, the tabernacle enclosing which formed part of the original design, the fountain itself being of polished serpentine marble, with an inscription. The bishop drank of the water, and was well pleased.

JARROW SEWERAGE WORKS.—The Local Board, on opening the tenders for the sewerage works to be constructed in that district, found that that there were ten tenders sent in, varying in amount from 5,984*l.* 4s. 8d. to 4,305*l.* 1s. The tender of Mr. H. Hudspeth, of Alnwick, was accepted, at the sum of 4,305*l.* 1s. The plans have been prepared by Mr. Clemence, borough surveyor, South Shields, under whose superintendence the works will be carried out. A commencement will be made at once with the works.

RAILWAY TRAFFIC RETURNS.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 21st of May, on 11,198 miles, to 676,090*l.*, and for the corresponding week of last year, on 10,805 miles, to 589,087*l.*, showing an increase of 393 miles, and of 87,003*l.* in the receipts. The increase on the Great Eastern amounted to 3,627*l.*; on the Great Southern and Western to 915*l.*; on the Great Western to 3,313*l.*; on the Lancashire and Yorkshire to 18,872*l.*; on the London and North-Western to 15,700*l.*; on the Midland to 8,105*l.*; on the North-Eastern to 10,592*l.*; and on the South-Eastern to 4,435*l.*

SANITARY CONDITION OF DERBY.—The local Board of Health have sent a letter to the Board of Highways for the Township of Litchurch, a hamlet in the neighbourhood of the city, pointing out the necessity for drainage other than at present into open water-courses and offensive ditches, and urgently recommending them to lose no time in effectually draining the township, as the rate of mortality was high, and should infectious fever break out in the township, Derby would suffer. The local Board of Guardians at Litchurch have the subject also under consideration.

LONDON IMPROVEMENTS.—The public will be glad to hear that four more of the houses in Newgate-street are to be taken down forthwith, for the purpose of widening the thoroughfare. They are situate at the eastern end, near the Post-office, and their removal, increasing the width of the street to 50 or 55 feet, will be a great boon. We observe that two houses in Holborn are already razed for the purpose of rebuilding, abutting at the back upon Little Turnstile; and as it happens that there are also at this time two vacant pieces of ground in Turnstile, it affords an unusually favourable opportunity to open out the thoroughfare here into Gate-street and Lincoln's-inn-fields,—an improvement much wanted.

ARTESIAN WELL, DONCASTER.—For some two or three years the corporation of Doncaster have been endeavouring to gain for the town an adequate supply of water by means of an artesian well. With this object in view, an experimental boring has been carried to the extent of 817 feet without any satisfactory result, beyond the fact that for some distance coal has appeared far more likely to turn up than water. However, the boring operations have come to a sudden termination, by the breaking of the rods in the borehole about 200 feet from the bottom. The contractors, Messrs. Clark, and Mr. Dale, of Hull, the consulting engineer, have exhausted their ingenuity and lost many instruments in endeavouring to recover the 200 feet of rod without any effect, and the latter gentleman has advised the corporation to abandon the present operation altogether, and to await his report as to what shall be done hereafter. The corporation have taken his advice, and after expending upwards of 1,000*l.* they have determined that the matter shall for the present remain in abeyance.

SOUTHWARK BRIDGE.—The chairman of the Southwark Bridge Company has lately addressed a letter to the Lord Mayor, offering to open the bridge to the public for a limited period on terms to be agreed upon, or to effect a sale for 200,000*l.* The proposal has been referred to the Bridge-house Estate Committee for consideration and report.

BURSTING OF THE BARNSLEY CANAL.—Near Old Mill, the aqueduct of the Barnsley and Wakefield canal has been leaking through a rocky portion of the embankment. Attempts were made to stop the rush of water, which was flooding all the valley below. After some difficulty, and by damming up two of the bridges with boardings, always ready for the purpose, the force of the leakage was broken, disclosing an opening of two yards, or nearly so, in diameter. The navigation of this part was, of course, temporarily stopped.

DEATH OF SIR JOHN WATSON GORDON.—The President of the Royal Scottish Academy, who was also a member of the Royal Academy, has lately died. He was born in Edinburgh some seventy-four years ago. He early turned his attention to that branch of his art,—portrait-painting,—in which he has achieved so high a reputation. He first exhibited in the Royal Academy in 1827, continuing to do so up to the present exhibition. In 1841 he was elected associate, and in 1851 member, of the Royal Academy. In 1850, he was appointed limner to her Majesty in Scotland, on which occasion he received the honour of knighthood.

THE PARISIAN CEMETERIES.—The question of closing the cemeteries of Paris, and forming a large one beyond the boundaries of the city, is now in course of discussion. Notwithstanding a regulation to the contrary, private buildings have been erected in close proximity to the existing cemeteries, the noisome exhalations from which, more especially after rain, affect injuriously the health of the inhabitants. In case of extra-mural burials being enforced, the present cemeteries will probably be levelled and covered with asphalte, trees being thickly planted around, so as to absorb the decomposing matter.

NEW BLASTING POWDER.—Dr. Field, of Wilmington, Delaware, has invented an improved powder for blasting and other purposes, the chief peculiarity of which consists in its being made up in two separate ingredients, one black and one white, which are mixed upon the spot just before using. The ingredients are non-combustible when separate, but highly explosive when mixed in equal proportions. The powder, placed in a hole 4 feet deep, put in and tamped in the usual way, was found, it is said, to be twice as powerful as ordinary gunpowder. The new powder can be manufactured very cheaply, and made of various strengths, according to the purpose for which it is intended.

OPENING OF NEW CHURCH AT BRYNMAWR.—The new Mission church, erected on a piece of land given by the Duke of Beaufort, at the top of Queen-street, Brynmawr, has been opened. The Mission church is a little wood building, for about 360 people. It is from a design by Mr. G. T. Robinson, archidiaconal architect, Leamington; and was built by Messrs. Hardwick & Sons, Birmingham, at their own establishment, and then taken to pieces, brought down to Brynmawr, and re-erected. It is fastened to the ground, and composed entirely of wood up to the roof, which is slated. It is somewhat in the shape of the letter T up to the altar, which is semi-circular in form; and in the three window-lights at the end are several small monograms "I. H. S." On the left is a small room, to be used as the vestry. The whole cost was 355*l.*, or about 1*l.* a head.

THE HOTEL MOVEMENT AT BRIGHTON.—The Norfolk Hotel, situate in King's-road, has passed into the hands of a company, and is about to be rebuilt. The contracts for a portion of the entire design have recently been opened, and the result was as follows:—

Fabian	£8,248	0	0
Patching & Son	8,111	0	0
Fatman & Fotheringham	7,887	0	0
Sawyer	7,723	0	0
Chappell	6,932	0	0
Reynolds (accepted)	6,825	0	0

The works connected with the re-building and enlarging the hotel, have been commenced by the contractor, Mr. Jabez Reynolds, of Brighton, under the superintendence and from the designs of Mr. H. N. Goulty, architect.

SOAP MINE.—A veritable soap-mine has been discovered in Esmeralda, California. The vein is 10 feet wide, 600 feet long, and runs very deep. The soap, when taken from the mine, is as soft as putty, but hardens on exposure to the air.

FLOATING TELEGRAPH STATIONS.—Some years since Prince Albert, who was then an Elder Brother of the Trinity House, suggested that the lightships round our coast should be connected with the shore by means of electric cables. The question was considered, but no means had then been thought of by which a ship swinging at her moorings could be permanently connected with the cable, and the far-sighted proposal was not carried out. A company now forming proposes to do that which Prince Albert suggested should be done. The first ships to which this novel extension of the present network of telegraphs will be applied are to be stationed off Scilly and Cape Race.

THE RAILWAY LINE BENEATH SKINNER-STREET AND SNOW-HILL.—Messrs. Mowlem, Burt, & Co. having completed the new sewer below the roadway in Skinner-street, Snow-hill, the contractors for the City Extension of the London, Chatham, and Dover line have commenced excavations for the piers of the arches to be erected underneath the carriageway and across the street to the bottom of King-street, Snow-hill. Until these works are completed, the new iron viaduct across Ludgate-hill will not be proceeded with, as both of these important thoroughfares cannot be closed at one and the same time. The works at Skinner-street and Snow-hill, however, will be pushed forward as rapidly as possible.

THE SHILLING CHURCH.—Since our notice of the opening of this church, at Hollingsworth, near Mottram, in Cheshire, we have obtained the following particulars. Messrs. Clegg & Knowles, of Manchester, were the architects. It was designed in the Early English style, and the church will accommodate 450 persons. The contract for the building was taken by Messrs. Warhurst & Sidebottom, of Hadfield. The total cost, it is believed, will be about 1,700*l.* The church is built of mill-grit stone, and there is a turret over the main entrance. The seats are of stained wood, and the roof of open timber work. There is a nave and chancel, but no galleries. The site was given by Mr. Taylor, of Booth Hall, Blackley.

A LARGE STORE.—The largest elevator in the world is being built at Milwaukee. Its storage capacity is to be 1,500,000 bushels. It is to have nine receiving and five shipping elevators, capable of taking in 45,000 bushels, and giving out 25,000 bushels of grain in an hour.—*New York Sun.*

FORMATION OF IRON BY METALLURGICAL INSECTS.—A Swedish naturalist, M. Sjogreen, has recently published a curious memoir on an iron mineral which is, he contends, the direct work of infusorial animalculæ, living in the midst of sweet water. This ferruginous mineral, known under the name of lake-ore, is sufficiently abundant in certain Swedish water-courses to be submitted to treatment in ironworks. The memoir of M. Sjogreen was composed with more especial reference to certain specimens of minerals shown in the International Exhibition in London in 1862. A lake in his neighbourhood had fallen much below the ordinary level, and enabled him to follow the evolution of the mineral. The bottom of the lake was in part laid bare, from the extreme lowness of the water, but there still existed depressions, filled by water and occupied by insects or infusorial metallurgists. These depressions presented a strange and marvellous spectacle. At the bottom of one, which was somewhere about 3 feet in diameter, small creatures of different sizes agitated themselves on the mineral, some being visible to the naked eye, while the others were so small that without a magnifying-glass it would have been impossible to discern them. All were actively engaged in inclosing themselves in a metallic envelope, just as the caterpillar encases itself in a cocoon; and the work seemed to the spectator to be effected in a systematic manner. The iron exists in the waters in a soluble state—or, rather, the waters borrow it from the surrounding lands. Lake mineral is produced with considerable rapidity: in certain lakes from which there had been extracted twenty-six years previously all the metallurgical crop, there was again found after this yield a fresh harvest of almost equal abundance.

SITE OF THE FLEET PRISON.—The Court of Common Council have entered into an agreement with the London, Chatham, and Dover Railway Company for the sale to them of the site of the late Fleet Prison for the sum of 60,000*l.*; and upon that large piece of ground, which has lain waste for the last twenty years or more, the committee intend forthwith to erect their London terminus, with convenient approaches.

TYNEMOUTH PIERS.—The Tyne Improvement Commissioners and Mr. Lawton, the contractor for the piers at Tynemouth, have had a serious dispute, it appears, on matters of account, which have been recently referred to arbitration; Mr. Lawton claiming, it is said, 80,000*l.* for extras, and the commissioners, in the evidence of Mr. Missent, contending that he is only entitled to 1,300*l.* Mr. Bidder is arbitrator for Mr. Lawton, Mr. Leslie, of Edinburgh, for the commissioners; and Sir John Rennie is the umpire.

PUMPING TO NO PURPOSE.—"Suppose," said an examiner to a competitive in engineering, "you had built an engine yourself, performed every part of the work without assistance, and knew that it was in complete order, but when put into a vessel the pump would not draw water, what would you do?"—"I would go to the side of the vessel and ascertain if there was any water to draw," replied the competitive. So smart a fellow, one would think, would first ascertain if there were "any water to draw" before he set his pump agoing; but we must remember that the examiner was pumping him, not he the examiner.

SIR THOMAS GRESHAM.—Honest and enterprising in the path he had marked out for himself, steadfast in the service of his queen and his country, and zealous for the dignity of both, he had little in common with the new generation of men just appearing in the prime of life. He had done his work in raising to an elevation never before attained, the old-fashioned sort of English commerce, within the narrow limits of European civilization, which he had learnt from his forerunners. In no unfriendly spirit, as we see from the numerous entries of his name as a subscriber to the exploring expeditions of Frobisher and others, but doubtless with the thought that he at any rate had no need to go out of the beaten track in which he had walked so well, he left the chivalrous company of Hawkinses and Raleighs, Drakes and Cavendishes, to extend the empire of commerce to far-off regions, and to open up new and boundless sources of trade. And he was wise in doing so. He died in harness. "On Saturday, the 21st of November, between six and seven of the clock in the evening," says Holinshed, "coming from the Exchange to his house, which he had sumptuously builded, in Bishopsgate-street, he suddenly fell down in his kitchen, and being taken up was found speechless, and presently died." On the 15th of December he was buried solemnly and splendidly, at a cost of 800*l.*, in St. Helen's church, hard by, a hundred poor men and a hundred poor women following him to the grave. His greedy wife and her greedy son, born of a former husband, his own son and daughter being already dead, inherited his immense wealth; and the indolence of the Mercers' Company, in the course of generations, robbed of nearly all its good effect the noble bequest, by which he intended to have converted his famous house into a yet more famous college for educating young merchants in those parts of knowledge best fitted to adorn and to improve their positions. But neither avarice nor apathy has been able to deprive the noblest name in the history of Tudor commerce of its place in the heart of every Englishman, or to undo the work of its greatest owner in forwarding the interests of trade and giving dignity to the merchant's calling.—*London Society.*

ARCHITECTURAL ASSOCIATION.—VOLUNTARY EXAMINATION CLASS.—The usual meeting will be held on Monday next, the 13th inst., when the subjects of the previous meetings will be recapitulated by the members generally. Subjects: Perspective, Timber-joiner, Mensuration, Excavator and Bricklayer, *&c. &c.*

TENDERS.

For brewery, at Stoke-on-Trent, for Mr. J. Mountford. Messrs. Scrivener, architects. Quantities supplied:—

Oakley & Minx	£1,760	0	0
Collis & Hudson	1,665	0	0
Barlow	1,569	0	0
Matthews	1,554	0	0
Steele (accepted)	1,495	0	0
Moss, Brothers	1,408	0	0

For rebuilding Nos. 20 and 21, Basinghall-str Messrs. Bates, Brothers. Messrs. Wimble & architects. After deducting value of old materials

Kirke	£4,470	0	
Thompson	4,060	0	
Brass	3,903	0

MILLWRIGHTS, ENGINEERS, and IRONFOUNDERS.—The PLANT, including 16-horse power Horizontal Steam engine, two lathes, Saw mill, Drilling Machine, Lathes, and other Effects, of the Millbank Iron Works, Speedwell street, Oxford, TO BE SOLD BY AUCTION, by
MR. R. PIKE, upon the PREMISES, on TUESDAY and WEDNESDAY next, JUNE 14 and 15, 1864, commencing at TWELVE o'clock each day (by direction of the Proprietor, Mr. Lee, of the Iron Works, High Wycombe, Bucks); comprising a 16-horse-power high-pressure horizontal steam-engine, steam mill, drilling-machine, lathes, smiths' forges, bellows, anvils, &c.; about 50 tons of prepared foundry sand, several tons of cast, and wrought iron, and a large quantity of valuable cast-iron patterns, and other effects.—The whole particularized in catalogues to be had upon the Premises; of Mr. J. LESTER CLARK, 2, Sambrook-court, Basinghall street, London; the Office of the *Daily Post*, Birmingham; and at the Auctioneer's Offices, adjoining the Town Hall, Oxford.

IN BANKRUPTCY.—To Timber Merchants, Builders, Yard Keepers, and Others.—Spa-road, Bermondsey.
MR. PEAKE is ordered by the Assignees of Mr. Thomas Freeman, bankrupt, to SELL by AUCTION, on the PREMISES, on TUESDAY and WEDNESDAY, JUNE 14 and 15, at TWELVE, in lots, the STOCK-IN-TRADE: comprising 8,000 yellow and white planks, 7,000 yellow and white deals, 1,000 yellow and white battens, 100 loads of timber, 1,375 square of flooring, two timber carriages, one timber truck, a valuable counting-house fittings, and numerous other effects.—May be viewed the day previous and in morning of sale, and catalogues obtained upon the Premises; of EDWARD EDWARDS, Esq., Official Assignee, 22, Basinghall-street; of Messrs. WILD & BARBER, Solicitors, 109, Ironmonger-lane, Cheapside, E.C.; and at Mr. PEAKE'S Offices, 44, Tooley-street, Southwark, S.E.

IN BANKRUPTCY.—To Timber Merchants, Manufacturers, Builders, and Others.—Spa-road, Bermondsey
MR. PEAKE is directed by the Assignees of Mr. Thomas Freeman, a bankrupt, to SELL by AUCTION, on the PREMISES, on TUESDAY, JUNE 14, at TWELVE for ONE, in one lot, the valuable LEASE, for a long term, at a very low rent, of the spacious premises, standing on a great area of ground. Erected upon it a most commodious dwelling-house, with foreman's residence in the rear, sheds, saw-pit, &c. the whole of the estimated rent of £60 per annum. The property may be viewed prior to the Sale.—Particulars with conditions, obtained of Messrs. WILD & BARBER, Solicitors, 109, Ironmonger-lane, Cheapside, on the Premises; and at Mr. PEAKE'S Estate Offices, 44, Tooley-street, South-wark, S.E.

50, CUMBERLAND STREET, SOMERS TOWN.—Timber Merchant's Stock by order of the Proprietor, retiring from the retail trade. First Portion.
MESSRS. LEREW & LEREW will SELL by AUCTION, on the above PREMISES, on MONDAY, JUNE 13th, at TWELVE, the STOCK: comprising mahogany cedar, walnut, wainscot, beech, birch, Swiss pine, 10,000 feet of veneers, deals, yellow, and spruce planks, deals and battens, whole and cut; paved flooring, quartering, slating battens, truck, &c.—Auction Rooms, 2, Carlington-street Hampstead-road, N.W.

SURREY HILLS.—Beautiful Building Sites, forming the first portion of the Kenley Park Estate, adjoining the Kenley Station, only a mile from the Caterham Junction Station on the main line of the London and Brighton and South-Eastern Railways, four miles from Croydon.
MESSRS. DEBENHAM & TEWSON have received instructions to offer for SALE, at the MART, on TUESDAY, JUNE 21st, in lots, varying from one to eight acres and a half, the FIRST PORTION of the KENLEY PARK ESTATE, comprising about 110 acres, offering some of the most attractive sites for building within fourteen miles of London, the situation being one of the most healthy on the range of the Surrey hills, the soil and climate remarkably dry, the air pure and invigorating, and the surrounding scenery of singular beauty. The land will be divided into lots to suit the requirements of gentlemen desirous of building detached houses for their own occupation, with sufficient land to enable them to enjoy the retirement of the country, combined with the advantages of ready access to the metropolis. A few lots fronting the main road are suitable for shops, and one has been especially reserved for an hotel. The whole is freehold and land-tax redeemed.—Particulars with plans (now ready), of Messrs. JOHNSTONE, FARQUHAR, & LEECH, Solicitors, 65, Moorgate-street; and of Messrs. DEBENHAM & TEWSON, 80, Cheapside.

PADDOCK-WOOD, KENT, immediately adjoining this important junction station on the South-Eastern Railway.—Plots of Land, with a registered and indefeasible title under the new Act.
MESSRS. DEBENHAM & TEWSON will SELL at the MAIDSTONE-ROAD INN, Paddock-wood, on WEDNESDAY, JUNE 29, at TWO for THREE, in lots varying from a quarter of an acre to three acres in extent, about 22 acres of FREEHOLD LAND (land-tax redeemed), immediately adjoining the Paddock Wood Station, having extensive frontages to three roads, and very valuable for building purposes, nursery and garden grounds, and accommodation land. One plot, facing the station, is especially designed for a public-house. Every lot will be sold with a registered title under the new Act, affording a clear, simple, and indisputable title, at an almost nominal cost. Two-thirds of the purchase-money on each lot can remain on mortgage at 5 per cent and be paid by instalments.—Particulars and plans of T. G. BULLEN, Esq. Solicitor, 19, Cannon street West; and of the Auctioneers, No. 80, Cheapside.

BEULAH HILL, NORWOOD.—Twenty four Acres of valuable Freehold Building Land, within about a mile of the Norwood Junction, Crystal Palace, and Lower Norwood Station, and about five minutes' walk from the Thornton Heath Station, affording access to London Bridge, Victoria, and Charing Cross, at frequent intervals throughout the day.
MESSRS. DEBENHAM & TEWSON will SELL at the GUILDHALL COFFEE HOUSE, near Guildhall, on WEDNESDAY, JULY 6, at ONE, punctually, in one lot, 24a. 1r. 7p. of very valuable and nearly all FREEHOLD BUILDING LAND, situate on the western slope of Beulah Hill, about three minutes' walk from the church. The land possesses considerable frontages to the Grange-road and Osborne-road. It commands extensive and beautiful views, is surrounded by a rapidly increasing neighbourhood, and offers eligible sites for villas or cottage residences. The whole is Freehold with the exception of 1a. 3r. 27p which is Copyhold of the Manor of Croydon.—Particulars of Messrs. THOMAS & HOLLAMS, Solicitors, Commercial Sale Rooms, Mincing-lane; and of the Auctioneers, 80, Cheapside.

Very important first-class Freehold Building Estate, at West Brompton, within six or seven minutes' walk of the Exhibition Building.
MESSRS. DEBENHAM & TEWSON will SELL at the GUILDHALL COFFEE HOUSE near the Guildhall, on WEDNESDAY, JULY 6, at ONE punctually, the Right of Purchase, at an agreed price, any time previous to 25th MARCH, 1866, of about eight acres and a quarter of very valuable FREEHOLD BUILDING LAND, situate immediately adjoining The Boltons, at Brompton, together with the Two Residences known as Hereford House and Colebrne Court, now on the property. The Estate possesses frontages on three sides, and, being within a few minutes' walk of Hyde Park and the most fashionable precincts of the Westend, offers an unusually fine opportunity for an important building operation in first-class residences. The soil is a deep gravel, and there is an abundant supply of spring water.—Particulars, with plans, of Messrs. BENHAM & TINDALL, Solicitors, 13, Essex-street, Strand; and of the Auctioneers, 80, Cheapside.

TO BUILDERS AND CONTRACTORS.
MR. TINDALE has been favoured with instructions from the Trustees to SELL by AUCTION, on the PREMISES, 28, Brook street, Ratcliff, and Dorset-street, Commercial-road, Stepney, without reserve, on WEDNESDAY, the 22nd JUNE, 1864, at ELEVEN o'clock, the STOCK-IN-TRADE of a BUILDER and CONTRACTOR: comprising yellow and Dantzic timber, dry cut stuff, scantling, Portland and York stone, scaffold-poles, boards, cords, pulleys, ladders, force-pump, white lead, turps, oils, varnish, bricks, few bricks, plate and street glass, builders' ironmongery, useful horse, two brick-carts, chaise-cart, harness, carpenters' benches, moortomachine, grindstone, six capital iron columns, and other effects.—Catalogues may be had on the Premises, and of the Auctioneer, 1, Portland-place, Commercial-road, Stepney, and 29, Ironmonger-lane, City, E.C.

SURREY.—An eligible FREEHOLD ESTATE, consisting of about 63 acres of superior land, possessing beautiful sites for building purposes, forming part of the Hall Mead Estate, in the important village of Sutton, about a mile from the station, with City and West-end termini.
MESSRS. RUSHWORTH, JARVIS, & ABBOTT will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change alley, Cornhill, on FRIDAY, JULY 8th, the very valuable ESTATE, above referred to, which restores in the rural and favourite village of Sutton, about a mile from the railway station, and little more than half-an-hour's journey from London, and, on completion of the lines now making, the distance to London will not only be greatly reduced, but the additional facility of the terminus in Farringdon-street of the Chatham and Dover Railway will be afforded. The whole is freehold, and (except on a small portion) the land-tax is redeemed. The land is undulated, and the elevated parts command most pleasing and picturesque views, extending far over this favourite county, and offer tempting sites for the erection of gentlemen's villas on a large or moderate scale. The Estate will be sold in lots suitable for capitalists, private gentlemen desirous of erecting their own residences, and speculative builders; and it possesses good brick earth.—Printed particulars and plans are preparing, and may be obtained fourteen days before the Sale, of CHARLES MORGAN, Esq. Solicitor, 15, Old Jewry Chambers, Cheapside, E.C.; and at the Offices of Messrs. RUSHWORTH, JARVIS, & ABBOTT, Battle-row, W. and 19, Change-alley, E.C.

HORNSEY RISE.—Piece of Freehold Building Land
MESSRS. GADSDEN & ELLIS will SELL by AUCTION at the MART, on TUESDAY, JUNE 21st, at TWELVE o'clock, a PIECE of very valuable FREEHOLD BUILDING LAND, on the south side of Shaftesbury-road, Hornsey Rise, near the Shaftesbury Tavern, having a frontage of about 177 feet by a depth of about 150 feet. Roads and sewers made. There is a great demand in the vicinity for houses of the a mual value of £35 and £40.—Particulars may be had of Messrs. WAILE & WESTALL, Solicitors, 1, Copthall court, Throgmorton-street; at the Mart; at the Shaftesbury Tavern; and of Messrs. GADSDEN & ELLIS, 18, Old Broad-street, City.

No. 62, COLEMAN-STREET, CITY.—28 Sicilian and other marble chimney-pieces, 15 tons white lead, dryers, green and other paints, Prussian blue, varnish, and effects, being the remaining STOCK of a manufacturer. Also four Holloway Ironmongery stoves, nails, screws, bolts, pans, and other useful goods suited to builders.
MR. KEMP will SELL the above STOCK with thout reserve, on MONDAY next, at ONE for TWO, at the Rooms as above. View and Catalogues had.

LOMBARD STREET.—Building Materials of Two Large Houses
MR. MURRELL will SELL by AUCTION, on the PREMISES, 4 and 5, George-yard, Lombard street, on TUESDAY, JUNE 28, at TWELVE for ONE, the valuable BUILDING MATERIALS: comprising several rods of excellent brickwork, lead cisterns, gutters, and pipes, oak and fir timbers, roofing, plate glass and other sashes, doors, marble mantles, flooring boards, bevelled, and the internal fittings, register stoves, ranges, safes and the general fixtures, &c.—May be viewed the day prior and morning of sale, and catalogues had on the Premises, and of Mr. MURRELL, Auctioneer, 1, Walbrook, Mansion House.

Also a large assortment of FANCY MOULDED BRICKS & GARDEN EDGINGS, Plain and Ornamental ROOFING and RIDGE TILES, Delivered to Vessels in the Dock alongside the Kilns, in the River Medina. Pattern Sheets, and all information, may be had of R. LANGLEY, Agent, East Cowes-park, Isle of Wight.

TO BRICKMAKERS. — All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of J. B. WHITE & BROTHERS, Erith, Kent. The advantages of this plan are two-fold. 1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 30 to about 10 per cent of the total make, which in itself represents a large permanent saving. 2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks. Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

FIRE BRICK and CEMENT WORKS, WOODEN BOX, near BURTON-ON-TRENT. Established 1847. JOHN KNOWLES, HAWLEY NEW WHARF, HAMPSTEAD ROAD, CAMDEN TOWN, N.W. BRIGHTON.—To BUILDERS.—TO BE DISPOSED OF, an old-established BUILDER'S BUSINESS, in a first rate situation, doing a good trade, with facilities for increasing the same.—For particulars, apply to Z. K. Post-office, Brighton.

FOR immediate DISPOSAL, the genuine BUSINESS of a PAINTER, PLUMBER, and GLAZIER, established about forty years, in a rapidly improving town, in Herts, and within easy distance of the metropolis.—Apply, by letter, for terms, and all particulars of the concern, to Messrs. JEFFERY & MEAGER, Auctioneers and Valuers, Great Berkhamsted.

TO PLUMBERS, PAINTERS, &c. or GENERAL CONTRACTORS.—An unusual offer presents itself in a very genuine old and well-established BUSINESS, a few miles from London. Any person who can command about 700l will find this a most advantageous offer, or can give security. — Address, A. B. C Office of "The Builder."

TO BE DISPOSED OF, a good BUSINESS of a CARPENTER, BUILDER, and UNDERTAKER, 9 miles from London.—Apply to Mr. ALEXANDER WILLSON, Oakfield-road, Penge, Surrey.

TO BE LET, the BUSINESS of a person in the BUILDING TRADE, the widow of deceased being desirous to let it. This is an excellent opportunity, being an old-established trade in the flourishing parts of Enfield Highway. A small premium required; stock at a valuation.—Apply, A. MEAD, Enfield Highway, Middlesex.

ROYAL POLYTECHNIC.—Patron H.R.H. the PRINCE of WALES.—Daily at 4 and 9, Mr. GEORGE BUCKLAND'S new Romantic and Musical Entertainments of Amy Robsart, Queen Elizabeth, and the Pageant of Kenilworth.—The tragic death of Amy Robsart—the ta dets of Queen Elizabeth receiving Shakespeare's works, are shown with the Ghost apparatus (JOHN HENRY PEPPER and HENRY DIRKS, joint inventors) Professor PEPPER'S New Ghost Lecture daily at quarter to 3 and quarter to 8. Admission to the whole, 1s. Open 12 to 5, and 7 to 10. Saturday mornings, 2s. 6d.

CITY of LONDON.—FORE STREET and CRIPPLEGATE BUILDINGS. Valuable PROPERTY TO BE LET by TENDER, on a long Lease or Leases, for rebuilding or other improvements, subject to pressing unexpired terms; comprising Shops in Fore-street, Nos. 12, 13, 14, 15, 16, 17, 18, 19, 21, 23, and 25; in Cripplegate buildings, Nos. 6, 7, 8, 9, and 10, being the Cripplegate Tavern; also the premises known as the White Horse-yard, occupied by Mrs. Scholes. The frontage in Fore-street is 231 feet 8 inches; in Cripplegate buildings, 109 feet 6 inches. The whole comprises more than half an acre, being about 23,620 square feet. Possession of a small portion can be given at Midsummer, 1864; of the larger portion at Midsummer, 1865; and of Nos. 12, 13, 14, 15, and 22, Fore-street, in 1871; and of the Cripplegate Tavern, in 1878. The property may be tendered for in whole or in part, to suit the views of the proposers. The estate is in close contiguity with the Manchester and Leeds markets, likewise with the proposed Finsbury Station of the Metropolitan Railway, and with which it might, no doubt, hereafter be placed in direct communication, and with the terminus of the North London Railway. The site is within three minutes' walk of the Bank of England; and by the new railways, easy communication will be had with every part of the metropolis and suburbs, with the whole of the United Kingdom, and with the docks and port of London. Possession may be had as before stated, subject to the materials being sold and cleared away. The day fixed for sending in the Tenders is MONDAY, the 20th of JUNE next.—For permission to view, apply to the tenants or occupiers. The particulars and plans, and conditions of letting, may be seen at the Offices of Mr. RICHARD SUTER, Architect and surveyor, 25, Gracechurch-street, E.C.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses and coachhouses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 8 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—App.y to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

BUILDING LAND at CHITT'S HILL, WOOD GREEN, overlooking three different counties, and fronting the high road, eight minutes walk from the station and Alexandra Park, TO BE LET for the erection of superior Villa Residences, which are in great demand in this beautiful locality. Term, 99 years. Money advanced if required.—A plan may be seen, and particulars obtained, on application to S. HEWITT, Architect and Surveyor, 101, Great Russell-street, Bloomsbury, W.C.

BUILDING LAND, Reading, Berks.—FOR SALE, by PRIVATE CONTRACT, in lots suited for the erection of private houses, a very eligible area of FREEHOLD BUILDING LAND, forming part of the rapidly improving Western Suburb of the Town. The roads on the Estate are excellent. The property is ornamentally timbered, and several portions of it are well fenced in with hedges, and planted with trees and shrubs of many years' growth. Distance from the centre of the Town and three Railway-stations, about a mile. A second Church is being erected in the immediate neighbourhood. Money advanced if required.—Apply to Mr. W. WEEDON, Solicitor, Reading.

IMPORTANT to COAL PROPRIETORS. CAPITALISTS, and OTHERS.—The owners of valuable MINES of COAL, lying within and under a compact freehold estate of upwards of 120 acres, situate about three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the absolute SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

ALUM BAY ESTATE, FRESHWATER, ISLE of WIGHT.—BUILDING LAND TO BE LET, for a term of ninety nine years, land-tax redeemed. Rent moderate.—Particulars may be obtained of Mr. AUGUSTUS FREKE, Architect and Surveyor, 22, Henrietta-street, Covent Garden, London; of Mr. WILLIAM RAWLINS, Solicitor, Winchester; of Mr. C. F. FISHER, Solicitor, Ventnor; or of Mr. S. M. BAKER, Solicitor, Ryde, where plans showing the disposition of the estate may be seen.—The journey from London via Lymington and Yarmouth, can be accomplished in about five hours.

NEWGATE STREET.—ST. BARTHOLOMEW'S HOSPITAL.—GROUND TO BE LET for Building, with a frontage of about 70 feet, on a lease of Sixty-one years, from Midsummer next, with immediate possession.—For further particulars, apply at Mr. HARDWICK'S Office, 1, Henrietta street, Covent-Garden square.
WILLIAM WILBY, Clerk.
May, 1864

BUILDING LAND.—TO BE LET, on the Great Junction Canal, LAND for BUILDING, bounded on one side by the Great Western Railway, and on the other by the Grand Junction Canal. The Canal also runs into the Estate. It is situated at Southall, in Middlesex, and is well adapted for Wharfs, Manufactories, Stages, and the like.—For terms, apply to the Scotchall Brick Company (Limited), 3, Adelaide place, London Bridge.

TO BRICKMAKERS.—TO BE LET, in consequence of the decease of the late owner, a BRICKFIELD of about THREE ACRES, situate on the outskirts of a town in Hertfordshire, about twenty miles from London, and half a mile from the railway station. It is now in full work, and abounds in brick earth 25 feet deep; lime is also found upon the property. In consequence of extensive building operations now taking place in the neighbourhood, a ready sale of all bricks made can be effected at very remunerative prices.—Messrs. DEBENHAM & TEWSON, 80, Cheapside.

FREEHOLD LAND TO BE SOLD or LET, for Building, in plots of half an acre, seven miles from Town, ten minutes' walk from the Ealing Station; delightfully situate.—For plans and particulars, apply to Mr LOMAX, Land Agent, 8, Orchard-street, Portman square. Trains from Farringdon street.

BUILDING LAND.—Several PLOTS TO BE LET, on LEASE for 99 years, in the Park, Highgate. One of the healthy situations in the vicinity of London, with extensive and beautiful views. A new church and a railway station immediately contiguous. Sewers and roads on the most approved construction are being made. Gas and water can be readily obtained.—For particulars apply to R. H. WYATT, Esq. No. 77, Great Russell-street, Bloomsbury, W.C.; or to Mr. WHEELER, Builder, South Grove, Highgate, N.

SUNNINGHILL WELLS, near ASCOT, BERKS.—FOR SALE by PRIVATE TENDER, a valuable and picturesque FREEHOLD ESTATE, known as The Wells, Sunninghill, which comprises a dwelling-house which has been used for many year as an Inn, with a large assembly-room, extensive stabling and buildings, meadows and gardens, and pleasure grounds, with two mineral springs, a general spring. The property is suitable either for the site for a New Hotel, or for the erection of elegant villa residence, being in the centre of a beautiful district, near to the Racecourse, and combining altogether about four acres and a half, with immediate possession. A plan, with full particulars and condition and form of Tender may be obtained from Messrs. DARVILL & SON, & POULTON, of Windsor, the Vendors' Solicitors. The Tenders must be sent to Messrs DARVILL & CO. on or before the 17th of JUNE next, endorsed "Tender for the Purchase of the Wells Sunninghill." The Vendors will not bind themselves to accept the highest or any other Tender.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views.—Apply to A. B. 192, Bermondsey-street, S.E.

A LARGE LOFT to BE LET, 56 feet by 21 feet, near the Midland Railway, Camden Town; also House and Shop.—Apply to Messrs STRINGFIELD & BLYTH, Bangor Wharf, King's-road, Camden Town.

BUILDING LAND TO BE LET, Bromley, KENT.—TO BE LET, several PLOTS of FREEHOLD BUILDING LAND. Money will be advanced.—For particulars apply to G. T. DAVIS, Esq. 43, Mincing-lane, City; or to Mr. LAVENDER, Architect and Surveyor, 26, Bedford row, London.

TO BUILDERS.—Wandsworth Common.—TO BE LET, in this favourite locality for houses to let at 35l. per annum, which are in great request. Drainage into sewer. Situation close to New Wandsworth Station, easy of access to City or West End.—For further particulars apply to C. W. TODD, Battersea Rise. Turn to the right from the Station.

BOURNEMOUTH.—Two Plots of FREEHOLD BUILDING LAND, having a frontage of 120 feet by 100 feet, admirably situated for the erection of a pair of villas. Price 110l. cash.—For further particulars, apply to J. M. M 1, Creed lane, Ludgate-hill, City, London.

PUTNEY.—To BUILDERS and OTHERS. Superior BUILDING LAND TO BE LET, on the main road, at Putney (within 150 yards of the railway station). Long lease. Ground rent moderate. Advances made.—For plans, &c. apply to J. H. ROWLEY, Esq. Architect, 33, Poultry, E.C.

RAMSGATE.—To BUILDERS, SAW-MILL OWNERS, and OTHERS.—TO BE SOLD, or LET, the ISLE of THANET STEAM SAW-MILLS, Ramsgate; comprising one 9-horse power horizontal steam-engine, go d 7 horse vertical ditto, large Cornish built steam boiler, and one 8-horse multitubular ditto, deal frame to cut two deals at one time, self acting circular sawbench, moulding machine, large carpenters' shops, outbuildings, &c. The machinery to be seen working daily.—For particulars, apply at the Mills, as above.

WAREHOUSES, COMMERCIAL-STREET, WHITECHAPEL.—TO BE LET or SOLD, Two newly erected Three story WAREHOUSES, with Basements, situate in the best part of Commercial-street, having a frontage of 105 feet, suitable for a Wholesale or Retail Business. A portion is set apart for a Dwelling House. For terms, apply to Messrs HAMMACK & LAMBERT, 59, Bishopsgate-street, City, E.C.

FREEHOLD LAND.—WANTED, to PURCHASE, on or near the banks of the River Lea.—Apply to Mr W BROWN, Surveyor, Abney Park, Stoke Newington, N.

VALUABLE FREEHOLDS in Lothbury, in the City of London, close to the Bank of England.—The Owners of the above Property, which consists of TEN FREEHOLD HOUSES, Nos. 48 to 57, on the west side of Tokenhouse-yard, Lothbury, in the City of London, having a frontage to the west side of Tokenhouse-yard of 200 feet, or thereabouts, and containing an area of upwards of 6 650 square feet, will be prepared, on THURSDAY, the 30th day of JUNE next, to open sealed TENDERS from persons desirous of PURCHASING the same. The property will be sold subject to the existing tenancies, to determine which notices have been given, and it is believed that vacant possession of the whole can be given on the 29th SEPTEMBER next. This property being in close proximity to the Bank of England, and extending over an area of upwards of 760 square yards, is most eligible for the erection of large and commodious offices for public companies.—Full particulars and plans of the property, together with forms and conditions of Tender, may be had on application to Mr HENRY FLETCHER VALLANCE, Solicitor, 15, Tokenhouse-yard, Lothbury, E.C.

A GENTEEL Six-Roomed COTTAGE WANTED. Rent must be moderate. About half-an-hour's ride to the City.—Address, DELTA, City Scotch Stores, Benet's-hill, Doctors'-commons, E.C.

C. A. WATKINS'S PATENT WIRE-BOUND ROUND and OVAL
PAINTING BRUSHES.
Distemper Brushes, Sash Tools, Stippling Brushes, Gilders' and Graners' Tools.
These goods are made of the best materials and workmanship, and have obtained a high reputation among the chief decorators in the kingdom. Varnish and Colour Manufacturers, Oilmen, Merchants, &c. are supplied on the lowest terms. Price Lists forwarded on application.

CUMBERLAND'S FERRIOXIDE PAINT should be used by Builders, Engineers, Ship Painters, Contractors, and all who are interested in preserving Iron, Wood, Stone, or Compo. For Ironwork there is nothing equal to it. Its preservative and anti-corrosive properties render it universally applicable. It possesses good body and colour (a rich dark red), and, the greatest recommendation of all, cheapness.
PRICE 20s. PER CWT. Samples sent if required.
MANUFACTURED SOLELY BY
HENRY CUMBERLAND,
CHEMICAL WORKS, MILLWALL, LONDON, E.

DO NOT BURN OFF OLD PAINT, but use NAENIARE & CO.'s LETHICIUM, which will remove it clean to the wood in twenty minutes.—Sold at 5s. per gallon, at 11, St. Andrew's-hill, Doctors'-commons, E.C. JOHN & WILLIAM EASTWOOD,
Belvedere-road, Lambeth, and Kent road Bridge.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lumps (forest), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or of E. & W. AARON, Agents, 66, South John-street, Liverpool.

SALES BY AUCTION.

BISHOPSGATE STREET WITHOUT.—Building Materials of several Houses.

PULLEN, HORNE, & EVERSFIELD are instructed to SELL by AUCTION, on the PREMISES, on FRIDAY NEXT, the 17th, at TWELVE, in Lots, all the VALUABLE BUILDING MATERIALS and FITTINGS-UP of the Block of Houses, Nos. 36, 37, 38, and 39, Bishopsgate-street Without, and several Tenements in the rear, extending to Rose-Alley: comprising good sound brick-work, at all rafters, joists, and other useful timber, plain and jam tiles and slates, glazed sashes, doors, pane led jambs, wainscoting, fittings, marble and other chimney-pieces and interior fittings, plate glass and other shop-fronts, sound floor boards, lead gutters, waterpipes, iron columns, paving, coping and cills, stoves, and various useful Stranger up.—May be viewed the day previous. Catalogues had at the Architect's Office, Guildhall; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

CARRARA WHARF, GROSVENOR ROAD, THAMES BANK, PIMLICO.

PULLEN, HORNE, & EVERSFIELD are instructed by Messrs. Fabbricotti, Brothers, to SELL by AUCTION, on the PREMISES as above, on WEDNESDAY, JUNE 22, at ELEVEN for TWELVE, a large Assortment of MARBLE BLOCKS, of recent importation, including statuary of fine quality for sculpture, w th first and second class statuary, vein, and Sicilian, and a variety of coloured marbles for manufacturing purposes. Also several thousand feet of Sicilian, vein, statuary, and coloured slabs, garden vases, figures, &c. Approved bills at four and six months.—May be viewed two days prior to the sale, and catalogues had at Carrara Wharf; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, City, and 40, Parliament-street, Westminster.

NEW SOUTHSEA, HANTS Valuable Freehold Estate, with Building Ground, close to Havelock Park.

MESSRS. PRICE & CLARK are instructed to SELL by AUCTION, at GARRAWAY'S Coffee House, Change Alley, Cornhill, on TUESDAY, JULY 5, at TWELVE for ONE o'clock, the important FREEHOLD ESTATE known as Freddington, New Southsea, comprising a capital and substantially-built Family Residence, with stables, outhouses, garden, orchard, and grounds; the whole containing about eight acres, and is well adapted for the formation of a public institution, or for a general building site. The property adjoins Havelock Park, and is near St. Barbholomew's Church and the newly erected beautiful residences in that locality. The surrounding property is rapidly rising in value, and the capabilities of this particular estate as a building site are highly favourable, offering an advantageous opportunity to capitalists, builders, and others to form a good sound profitable investment. The property may be viewed until the day prior to the sale by application to Mr. CARTER, 7, Up on street, Portsea; and particulars with plans may be had 14 days preceding the Sale of Messrs. HELLARD & SON, Solicitors, Portsmouth; and in London at GARRAWAY'S, and the Offices of PRICE & CLARK, 48, Chancery lane.

PIMLICO.—To Builders, Material Buyers, and Others.—Important Sale of Superior Building Materials, to be cleared away for the prompt Improvement of the Estate.

MR. GEO. HAINES announces for SALE by AUCTION, on the PREMISES, on WEDNESDAY, THURSDAY, and MONDAY, JUNE 15th, 16th, and 20th, at TWELVE each day, all the very excellent MATERIALS of the Spacious Family Residences, with back buildings, Nos. 1 to 9 Lower Grosvenor place, facing the Royal mews, comprising 200,000 of prime stock bricks, several tons of lead, ventilated slates, glazed and other roofs; sound internal fittings of the numerous large rooms with batten floors, stout joists and girders, statuary and vein marble chimney-pieces, stone staircases, and pavement of halls; fixtures and appendages May be viewed. Catalogues of Messrs HAINES & SON, Moorgate-street, City; and at the Auction Offices, Grosvenor-street West, and 264, High-street, Kensington

IMPORTANT CITY FREEHOLD, comprising the spacious Eagle Hotel, Gracechurch street, with extensive Premises and Yard, containing an area of 6,400 square feet, adapted for advantageous building

CHINNOCK, GALSWORTHY & CHINNOCK are instructed to SELL by AUCTION, at the GUILDHALL COFFEE HOUSE, near the Bank of England, on THURSDAY, JULY 14, at TWELVE (unless previously disposed of by private contract), a valuable FREEHOLD INVESTMENT, situate in the very heart of the City, where all the chief commercial interests of London are now being centred: comprising the principal portion of that well-known establishment the Spread Eagle, Gracechurch-street, with extensive premises and yard, having a back entrance to Leadenhall Market; the whole containing an area of nearly 6,400 square feet, and forming one of the most important building sites to be found in the City, its advantageous position rendering it admirably adapted for rebuilding as offices, whereby a very large rental may be obtained, thus offering a rare opportunity for the employment of capital.—Particulars may be obtained of DUCK, Esq. Solicitor, 75, Fenchurch-street, of Messrs WALES & SPARKS, Solicitors, 7, Great Swan Alley, Moorgate-street; at the Mart; and of Messrs. CHINNOCK, GALSWORTHY, & CHINNOCK, Land Agents and Surveyors, 11, Waterloo-place, Pall-mall.

Various Plots of FREEHOLD BUILDING LAND, at Camberwell New-road, Surrey.—By

MR. VIGERS' GARRAWAY'S COFFEE HOUSE, Change alley, Cornhill, on TUESDAY, JUNE 14, at TWELVE for ONE, by order of the Directors of the London, Chatham, and Dover Railway Company, viz., a PLOT of FREEHOLD BUILDING LAND, in the Denmark road, close to the Camberwell Station, with frontage of 166 feet, and an average depth of 200 feet; a Piece of Freehold Building Land, with a frontage to the Camberwell-road of 26 feet, and a depth of 108 feet; also a very valuable Enclosure of Freehold Land, in the rear of Grosvenor Place, Camberwell, containing 47,250 feet superficial, suitable for the erection of an extensive factory, or for small houses, which are much required in the locality.—Particulars and conditions of sale may be obtained of Messrs. FRESHFIELD & NEWMAN, 5, Bank-buildings; at Garraway's; and the Estate Exchange, Change-alley, Cornhill; or of Mr. VIGERS, Land Agent and Surveyor, 7, Frederick's-place, Old Jewry, E.C.

WILTS.—Residence, with 18 acres of Land, Valuable Freestone Quarry, and Extensive Buildings, at Rudloe Firs, in the Parish of Corsham, two miles from the Box and Corsham Stations on the Great Western Railway.

MESSRS. DARLEY & SONS will offer for SALE by AUCTION, at the ANGEL HOTEL, CHIPPENHAM, on FRIDAY, the 24th day of JUNE, 1864, at FOUR o'clock in the afternoon (unless previously disposed of by private contract), a Residence, with large garden, situate at Rudloe, in the Parish of Corsham, near the entrance to Hartham Park, and a valuable Freestone Quarry, with masons' and sawing sheds, stables, and every convenience for working the valuable stone which underlies the estate. Also two closes of very fertile Arable Land, containing 14a. 2r. 3p. with large yard, stone quarry, sheds, and other buildings. These lands are free of great tithes, and held by grant for 1,000 years. Rent only 2l. 2s. 6d. per annum, land tax, rent, and one-fifth part of Inheritance of the Manor of Corsham. The above property forms a most desirable investment for a capitalist wishing to embark in the stone trade; the increasing demand for Box stone being greater than the supply.—Particulars may be obtained of the Auctioneers, and of Mr. T. ABDY FELLOWES, Solicitor, Chippenham.

CROYDON, SURREY.—First-class Freehold Building Land, in a charming and picturesque locality, being part of the Haling park Estate.

MESSRS. BLAKE will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change alley, Cornhill, on TUESDAY, JUNE 21, at TWELVE o'clock, highly valuable FREEHOLD BUILDING LAND, in lots of about half an acre each, approached by a capital private road, 30 feet wide, with lodge entrance, in an open elevated position, commanding beautiful views, and having a subsoil basis of gravel. The Estate is admirably adapted for the erection of superior residences, and in order to guard against the possibility of the character of the neighbourhood being deteriorated, the purchasers will be restricted from building any other than private houses. Gas and water mains and sewers are already laid in the road. The terminus of the South Croydon Railway, which is now in the course of construction, will be within a few minutes' walk of the land, and the Waddon and East and West Croydon Stations are within easy distance of it. Particulars, with plans, may be had fourteen days before the Sale at Garraway's Coffee-house, Change alley; of Messrs CURREY & HOLLAND, Solicitors, 9, Old Burlington-street, London; and of Messrs. BLAKE, Croydon.

MARINE RESIDENCE, with upwards of 21 acres of Land, distinguished as Appley House an important Freehold Property on the Coast at Ryde, Isle of Wight. With immediate possession.

MESSRS. FULLER & HORSEY are instructed by the Trustees to SELL by AUCTION, at the MART, London, on WEDNESDAY, JUNE 15, 1864, at TWELVE o'clock, in one lot, APPLEY HOUSE and ESTATE, an important freehold property, situate within a few minutes' walk of the pier, at Ryde, Isle of Wight, possessing singular natural attractions as a residential estate, with numerous sites for the erection of villas, so greatly in demand in this much-admired watering-place. Appley being now the only land available for such a purpose with a sea view, in close proximity to the seashore, near the town of Ryde. The estate is literally within a ring fence, the northern boundary being girt by the sea, and secured by a stone wall, forming an esplanade in a line with the principal esplanade of Ryde, leading to the pier. The land here, which rises precipitously, is covered with a thicket-wooded plan adopted, the result of which would (if desired) enable the owner to build a terrace of houses on the esplanade, without at all interfering with the privacy or views of the higher portion of the property. The surface of the land is undulating, rising to the house on the south side, sloping towards the south, and then rising again to a considerable elevation, commanding very extensive and uninterrupted views from far beyond Spithead, on the east, extending to Southampton water on the west. The residence, which was enlarged and improved by the late owner, is approached by a carriage-drive through parklike grounds, with two lodge entrances from the Appley-road, and from the St. Helen's turnpike-road, near St. John's Church.

The internal arrangements comprise a suite of three reception-rooms, well-proportioned dining-room and gentleman's room, numerous principal and secondary bed chambers and dressing rooms, bath-room, work-room, nursery, very complete domestic offices, and capital arched cellarage, with ample supply of spring water from a deep well, and large underground tanks for soft water. In the front and rear of the house are the north and south lawns, noted for the luxuriance of the myrtles, and other choice shrubs and trees; the whole encircled by rich park-like land, studded with stately timber, including many very fine oaks, chestnuts, limes, and elms; the latter towering high and forming, with wood and gentleman's rooms, numerous principal and secondary bed chambers and dressing rooms, bath-room, work-room, nursery, very complete domestic offices, and capital arched cellarage, with ample supply of spring water from a deep well, and large underground tanks for soft water. In the front and rear of the house are the north and south lawns, noted for the luxuriance of the myrtles, and other choice shrubs and trees; the whole encircled by rich park-like land, studded with stately timber, including many very fine oaks, chestnuts, limes, and elms; the latter towering high and forming, with their magnificent branches, a conspicuous object from Ryde Pier. At a short distance from the house are modern stables and farm-buildings, including a dwelling-house for the gardener, stabling for four horses, double coach house, cow house, cart house, laundries, potting and fruit rooms, a range of forcing and succession houses, large walled kitchen garden, with choice wall-fruit trees and espaliers, and a well-stocked orchard. The Appley-road forms the southern and western boundary of the estate, and affords a large available frontage, while the land itself contains ample stone for building and brick earth, and the remarkable and at present complete seclusion of Appley House need be but little (if at all) interfered with, by judicious building operations under the control of the proprietor. The increasing value of building land at Ryde, abundantly confirmed by the fact that all marketable land has within the last few years been let at high rents for building purposes; the singular natural advantages possessed by this property, its sea frontage, and proximity to the pier, combine to render this estate deserving attention, either as a building speculation alone or combined with the possession of one of the most charming marine residential properties in the Isle of Wight. Printed particulars, with plans, are now ready, and may be had of Messrs. WALLIS, House Agents, and at the Pier Hotel, Ryde, at the Portland Hotel, Southsea; the George Hotel, Portsmouth; of Messrs. THOMAS & HOLLAMS, Solicitors, Commercial Sale Rooms, Mincing-lane, London, E.C.; and of Messrs. FULLER & HORSEY, Billiter-street, London, E.C. to whom all applications to view the property must be addressed.

CANADIAN MANUFACTURES from the Paris Exhibition of 1855, and the International Exhibition of 1862, and now exhibited at the Crystal Palace, Sydenham

TO TIMBER MERCHANTS, CABINET AND PIANOFORTE MAKERS, AND OTHERS.

MR. EDMONDS will SELL by AUCTION, on the PREMISES, 212 and 214, Hackney-road, on WEDNESDAY, JUNE 15, at ELEVEN for TWELVE, the well-seasoned STOCK in TRADE of a Timber Merchant, comprising 20,000 feet Spanish Mahogany, 30,000 feet Honduras, 10,000 feet Walnut, in planks and boards; 50,000 feet Spanish Veneers, large Quantity of Rosewood, Walnut, Honduras, Maple, and Birch Veneers; 2,000 dry cut Pine Plank, Deals, and Battens, and a Quantity of useful Stuff.—May be viewed the day prior. Catalogues to be had on the Premises; and at the Auctioneer's Offices, 23, New North road, N.

SURBITON-HILL, in the parish of Kingston-on-Thames, Surrey.—An ESTATE comprising a Gentleman's Residence and upwards of Six Acres of very valuable Building Land thereto adjoining, situate at Surbiton-hill, in the parish of Kingston-on-Thames, within two minutes' walk of the Surbiton Station, on the South-Western Railway, and now in the occupation of W. J. CARR, Esq. The proximity of this estate to the Surbiton Station, on the South-Western Railway (at which twenty-five up and twenty-four down trains stop daily) renders it most eligible for purchase by gentlemen engaged in business in London during the day, and the opportunity afforded by this sale of purchasing beautifully and pleasantly located building sites in one that rarely occurs. And also of a Freehold Garden, with Stables and Sheds, in Kingston-on-Thames, in the occupation of Mr. DANIEL WELLS, basket maker.—TO BE SOLD by AUCTION by

DANBY & CALESS, on TUESDAY, the 14th day of JUNE, 1864, at the SUN HOTEL, Kingston-on-Thames, at SIX for SEVEN o'clock in the afternoon, subject to conditions to be then and there produced, unless previously disposed of by private contract, of which due notice will be given.—Notice, the Residence and six acres of Land above described (being Lots 1 to 12, both inclusive) will be offered in one lot; but if no satisfactory bidding be made, it will be immediately withdrawn and disposed of in lots, as hereafter described. There is a land-tax on the Estate of 3l. 8s. 6d., which will, if necessary, be apportioned at the time of sale. For a view, cards of admission can be obtained at the Sun Hotel, Kingston; at the Office of the "Surrey Comet;" and of Mr. Danby, Land Surveyor, Hampton Wick.—Particulars and plans may be had at the Place of Sale; of Messrs. R. M. & P. LOWE, 2, Tanfield court, Temple, London; and of Messrs. ROLLS & PELLATT, Solicitors, or the Auctioneers, all of Banbury; at the Sun Hotel, and the "Comet" Office, Kingston; and of Mr. WALKER, Surveyor, Hampton Wick.

CLAPTON.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, the 20th of JUNE, 1864, at TWELVE for ONE o'clock, a further portion of this eligible FREEHOLD BUILDING LAND, free of tithe and land-tax, situate on the Rendlesham-road, leading from Downs-road to Upper Clapton, close to the Hackney Downs, and within half an hour's ride of the City. Nine-tenths of the purchase money may remain on mortgage or contract at 5 per cent. to be paid in nine years, by half yearly instalments; but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained any day before the sale, at the Old King's Head, Upper Clapton; of Messrs. RUSSELL & DAVIES, 39, Coleman-street, London, E.C.; the Auctioneer, 14, Moorgate-street, London, E.C.; or the Foreman on the Estate; and at the Place of Sale.

TO BUILDERS AND OTHERS.—Sawing, Planing, and Moulding Factory, 15, Great Swan Alley, Moorgate-street, Cancery Lane

MR. JAMES BEAL, having sold the leases, will SELL by AUCTION, on the PREMISES, as above, on FRIDAY, JUNE 17, at ELEVEN for TWELVE o'clock (without reserve), by direction of Mr Sands, who is retiring from business (without limit), the entire of the CONVENIENT dry pine, yellow and white planks, deals, battens, and quarter sq. in mahogany planks, birch and beech, planed and matched floor and lining boards, fourcased and other door frames, oak cills and posts, a quantity of scaffold poles and boards, barrows, rubbers, patent weighing machine, builder's spring van, carts, and pharetry, two useful horses, shafted cart, 6 inches, with circular saw, circular saw bench, moulding and mortising machines, and numerous useful effects.—On view two days prior to sale. Catalogues may be had on the Premises; and of the Auctioneer, 209, Piccadilly, W.—Good will of Business for Sale.

YORKSHIRE, adjoining a Railway Station.—To Manufacturers and Others requiring cheap Coal and Railway and Water Transit, and to Brewers.—TO BE SOLD by AUCTION, by

DIXON & BUSH, at the CROWN INN, Rotherham, Yorkshire, on WEDNESDAY, the 22nd day of JUNE, at FIVE p.m., LOT 1, FREEHOLD LAND, with Warehouse, Cottage, and Buildings thereon, adjoining, and having a frontage of about 250 feet to the Masborough station of the Midland Railway, Rotherham, comprising 2,830 square yards or thereabouts, and the means of water communication with the sea, are with in a few hundred yards. Lot 2. Freehold Hotel, called the "Red Lion," and the yard, stables, loose boxes, and premises, comprising a very large site, in Bridgate, being in the middle of the town of Rotherham, and close to the Court-house.—For plans and further particulars apply to Mr JOSEPH BADGER, Solicitor, Rotherham.

LIVERPOOL.—Valuable Steam Saw-mill, Planing and Moulding Machinery, &c.—Harrington street and Grafton-street (with accommodation land adjoining).—By

MR. EDWARD CHALONER, on FRIDAY, JUNE 17, at TWELVE o'clock precisely, on the PREMISES, in Harrington-street, subject to such conditions as shall be then and there produced.

LOT 1. All that Piece of FREEHOLD LAND, situate on the west side of Grafton-street and east side of Harrington street, in Toxteth Park, in Liverpool, with a frontage of 80 yards to each of the said streets, and being 100 yards in depth, and containing 8,000 square yards; together with the Steam Saw-mills and other Buildings thereon erected, which are now in many years as the "Brunswick Steam Saw mills," with the boilers, steam engine, and sawing, planing, and moulding machinery, fixtures, and tools, as they now stand, in full working order. A detailed descriptive catalogue of all the machinery, tools, &c. will be ready in a few days.

2. All that Piece of FREEHOLD LAND situate on the east side of Grafton-street aforesaid, and on the west side of Mann-street, with a frontage to each of such streets of 100 yards, and bounded on the north by Northumberland-street, with a frontage thereto of 45 yards, and containing altogether 4,500 square yards. Both of these properties are close to the new goods station of the Liverpool and Garston Railway Company, and to the Brunswick Dock. The mills may be viewed, and copies of the Plan and Particulars obtained, on the Premises.—For further particulars, apply to Mr. WILLIAM FOSTER, Solicitor, 23, Cannon-street, London; to Messrs LOWNDES & CO Solicitors, 3, Brunswick-street, Liverpool; to Mr. EDWARD WHITLEY, Solicitor, 6, Water-street, Liverpool; Mr. CROPPER, Solicitor, Pelican-buildings, Harrington-street, Liverpool; or to Mr. EDWARD CHALONER, Estate Office, Queen's Dock, Liverpool.

Immediately after the above WILL BE SOLD the STOCK of TIMBER, &c. Catalogues, containing full particulars, may be had at the Office of "The Builder"; or had on application to the Broker.

ST. JUDE'S (LATE) TEMPORARY CHURCH, GRAY'S INN ROAD.

COMPETITIONS.

TO ARCHITECTS. — The Corporation of East Retford are desirous of being furnished with DESIGNS and ESTIMATES for the ERECTION of a NEW TOWN HALL, with covered Corn Exchange and Markets in connexion therewith. A Premium of £20 will be given for the Design adopted, such Design and Estimates to be the property of the Corporation. The whole expense of the buildings not to exceed £6000. The Corporation to not bind themselves to employ the architect whose design may obtain the premium; but if they do, then he shall not be entitled to the premium. A plan of the land and further particulars may be obtained on application to me,
NEWTON & JONES, Solicitors.
Town Clerk's Office, East Retford.

CONTRACTS.

TO CONTRACTORS.—Limehouse, London. The Proprietors of the Limekiln Dock Yard are prepared to receive TENDERS for the CONSTRUCTION of a GRAVING DOCK, 333 feet in length, and other Works. Plans, specifications, &c. may be seen, and time of quantities had, at the Office of the Engineer, Mr. WALTER R. KINIPPLE, Parliament Chambers, Cannon-row, Westminster, on and after WEDNESDAY, the 15th day of JUNE 1864. Tenders, indorsed "Tenders for the Limekiln New Graving Dock," are to be forwarded to the Proprietors, at the Dock, on or before the 27th day of JUNE, 1864. The Proprietors will not be bound to accept the lowest or any Tender.
London, June, 1864.

NOTICE to CONTRACTORS.—TENDERS are required for PROVIDING and LAYING CAST-IRON OUTLET PIPE from No 1 Sluice to the Level of Low Water, in the River Medway, at Sheerness. A plan, showing the position and levels of the pipe, &c. may be seen, and a specification, with all necessary information, obtained, on application at this Office, between the hours of TEN and FOUR, Sundays and 28th June excepted, from 20 h to 30th JUNE instant. Tenders will not be received later than 4h JULY next. The Secretary of State for War does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, Sheerness, 13th June, 1864.

WAR DEPARTMENT CONTRACTS.—NOTICE to BUILDERS.
TENDERS are required for RENEWING COOKHOUSE, ABLUTION, and BATH ROOMS, at the West Wing of Hounslow Barracks, in the county of Middlesex.
Parties desiring to Tender for the erection of these Works must leave their names at this Office from the 20th to 25th JUNE, 1864, both days inclusive, between the hours of ELEVEN o'clock a.m. and THREE o'clock p.m. and pay the sum of half-a-guinea for the bills of quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, London District,
11, James-street, Buckingham-gate, London, S.W.
June 14, 1864.

CONTRACTS.

NOTICE is hereby given, that TENDERS will be received by the Director of Contracts, War Office, Pall Mall, London, S.W. on or before the 30th JUNE, 1864 for the SUPPLY of the following description of MATERIALS for Artificers' Work, to be delivered into store at Brompton Barracks, from time to time, for a period of Three Years, from the 1st of APRIL, 1864, determinable at any period after one year, on either party giving to the other three months' notice in writing, viz —

Bricklayers' Materials.	Paviours' Materials.
Carpenters' do.	Plasterers' do.
Masons' do.	Plumbers' do.
Painters', Glaziers', and Paperhangers' do.	Slaters' do.
	Smiths' do.

The probable quantities of Materials required for the present year are:—

1,000 feet cube of Fir, in bank.
1,700 feet super. (in total) of 3-inch Deal, Ash, Beech, Elm, and Oak.
460 lb. of Nails.
1 cwt. of Glue.
28 cwt. of Tarred Rope.
27 cwt. of Iron.

The Secretary of State reserves to himself the right of rejecting any or all Tenders that may be presented.
Further information and printed forms of Tender may be obtained, and schedules of Contract may be seen, on application at the Royal Engineer Establishment, Brompton Barracks, from the 18th JUNE to the 27th JUNE, and no Tender can be admitted after the said 30th JUNE, 1864
Royal Engineer Establishment, Chatham, June 14th, 1864

TO BUILDERS. — Parties desirous of CONTRACTING for the ERECTION and COMPLETION of ST. JOHN'S CHURCH, Carlisle, may see the plans and specifications, and obtain bills of quantities, at the Office of JOHN NANSON, Esq. Solicitor, 75, Castle-street, Carlisle; or at the Office of the Architect, Journal Chambers, Nottingham.—Plans, &c. may be seen on and after MONDAY, JUNE 6th. Contracts to be delivered at the above Office, in Carlisle, endorsed "Tenders for St. John's Church," on or before JUNE 22nd inst. The Committee do not bind themselves to accept the lowest Tender.
ROBT. CLARKE, Architect, Nottingham.

GLOUCESTERSHIRE.—To BUILDERS. COUNTY POLICE STATION. — The Magistrates for the County of Gloucester are willing to receive TENDERS for the ERECTION of a POLICE STATION and PETTY SESSIONAL COURT, at Wotton-under-Edge. Persons desirous of contracting for the works must pay a deposit of £1 for the Specification, Plans, Form of Tender, and any further information, after THURSDAY, the 16th of JUNE, on application at the Offices of Mr. J. N.B. The Iron Buildings manufactured by R. STAP are not fixtures on Leasehold Property.

WROUGHT IRON WINE BINS.

FARROW & JACKSON

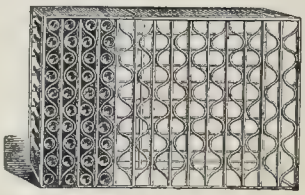
Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

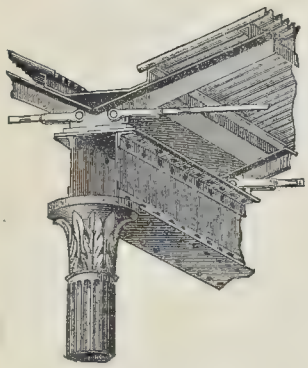


NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with

SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.



No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents o the Bin.

FARROW & JACKSON,

18, 17, and 16, GREAT TOWER STREET; and 1, HARP LANE, LONDON, E.C.

IRON LIGHTHOUSES, &c.

WORKS:

TIVIDALE, STAFFORDSHIRE.

HENRY DOULTON & CO.'S

PATENT COMBINED SMOKE AND AIR FLUES.

BY THIS INVENTION PERFECT DRAUGHT AND COMPLETE VENTILATION CAN BE SECURED.

THE air-flue follows the line of the smoke-flue, the passages being quite distinct. The heat from the smoke-flue causes a current, which carries off the vitiated air admitted by junctions near the ceiling. The pipes or blocks are *all made to bond with ordinary brickwork.*

Where the blocks come together, each air-flue has a lip or projection, which enters the next block and completely shuts off the air-flue from the smoke-flue at the joint. This lip, with dowels at the opposite corners of the blocks, also holds the lengths firmly together.

Curves are made to suit any inclination.

Manufactured in Terra Cotta for smoke-flues equal to 12 in. 10 in. and 8 in. diameter, with ventilating-flues of proportionate size.

Small models will be forwarded to architects on application to

Henry Doulton & Co. High-street, Lambeth.

FURNESS'

SMOKY CHIMNEYS,

S. DEACON

Respectfully invites the attention of Architects Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by

BROWN & GREEN'S
PATENT KITCHEN RANGES.
PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

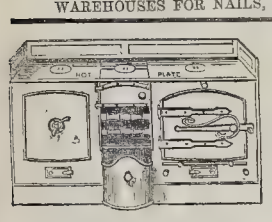
J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Cumpat Admiralty alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture



New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Founds, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

. Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,

WHOLESALE AND MANUFACTURING IRONMONGERS,

38 and 65, York-street, Westminster.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

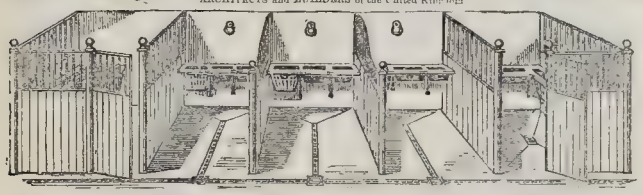
MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the works of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

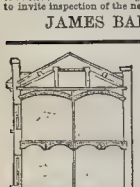


Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.



These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the First ARCHITECTS and BUILDERS of the United Kingdom

BY APPOINTMENT TO H. R. H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford-street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well selected STOCK of STALL and LOOSE-BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the newly-erected Practical Stable, now on view. Illustrated Catalogues on receipt of Four Stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens London."

CHUBB'S
WROUGHT IRON FIRE-PROOF DOORS AND FRAMES,

OF VARIOUS SIZES, FOR STRONG ROOMS,

AND ALL SECURED BY CHUBB'S GUNPOWDER-PROOF LOCKS, may be seen at 57, ST. PAUL'S CHURCHYARD.

THE IMPROVED OPEN FIRE KITCHENER,

Manufactured by

WM. OWEN, PHŒNIX IRON WORKS,

ROTHERHAM,

Possesses all the advantages of the ordinary Close Fire Kitchener, in having excellent Hot Plates on top of Ovens, for boiling, steaming, or stewing, with the additional advantage of having a thoroughly effective and deep OPEN Fire for roasting purposes.

The Ovens are heated upon Bradley's Patent Principle (under which W. O. possesses the sole right to manufacture), and by which a great economy of fuel is effected.

These Kitcheners are made of all qualities and sizes, suitable for all classes of houses, from the cottage to the mansion; and can be OBTAINED THROUGH ANY IRONMONGER in the UNITED KINGDOM.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION CLASS 31.

"Of the most recent inventions deserving of note is that of Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Range is the placing of the OVEN and ROASTER one above the other instead of side by side; and the ROASTER is completely replaced, &c. &c. &c."

THE FURNISHING OF BED-ROOMS.

HEAL & SON have observed for some time

that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the style and effect of different descriptions of Furniture, it is necessary to set each description should be fitted in separate rooms. They have therefore erected large and additional show rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.

Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them highly ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will constantly be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and servants' use, is very greatly increased. The entire Stock is arranged in eight rooms and galleries (each 12 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet work, and they have just erected large Work-shops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They particularly call attention to their Patent Spring Mattress, the Somnier Elastique Portatif. It is portable, durable, and elastic, and is as cheap as the old-fashioned Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham-court-road, London.

CAUTION to ARCHITECTS and BUILDERS.

—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS;
SMITH'S PATENT WEATHER-TIGHT WATER BAR; and
SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS:

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

TO BUILDERS AND OTHERS.

WILLIAM SKETCHLEY would call

attention to his SAWING, PLANING, and MOULDING TABLE. It is adapted for sawing 12-inch deep and planing 11-inch deep, and moulding 6-inch wide. It is also fitted with drunken saw and slide cramp for tenoning, &c. &c. The price of disc to prepare 9-inch flooring, 7*l*. N.B. The disc can be applied to any saw table, and will prepare flooring in a first-class manner.—For further particulars apply to WILLIAM SKETCHLEY, Great George street, Weymouth.

HENDERSON'S PATENT DERRICK CRANE.—Prize Medals for Practical Utility and Moderate Cost.

HENDERSON'S PATENT DERRICK CRANE, so extensively used in the building of the Exhibition Building, is always be had from the Makers, Iron Bridge Works, Parkside Foundry, Forge, Wharf, Quarry, Warehouse, and other descriptions of Cranes; also Steam Winches and Cranes (on the Derrick principle). Water Companies and others can also be supplied with our Improved Sluice Valves.—For further particulars apply to BOWSER & CAMERON, Makers, Springfield Iron Works, M'Neil-street, Glasgow.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.

To BUILDERS, CARPENTERS and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

WINDOW-BLIND MATERIALS.—

H. & J. DOVE, 31, Ludgate-hill, London, E.C. SUPPLY the TRADE with every description of MATERIALS for INSIDE and OUTSIDE WINDOW-BLINDS, comprising Sun Blind Tapes, Linen Hollands; Buff, Green, and White Cottons; Green, Crimson, and Blue Tammies, Fancy Printed Blinds, Cords, Tassels, and all kinds of Webs and Lines for Venetian Blinds; also every quality of Patent Sash Lines.—Price lists on application. Established A.D. 1797.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

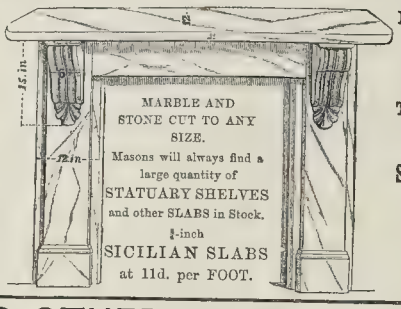
PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.



BOX STONE CHIMNEY PIECES
for 5s. 6d.
Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS
in great variety, equally low in price.

MASONS' WORK OF ALL KINDS
CONTRACTED FOR,
AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF
500 CHIMNEY PIECES
always to choose from.

PRICE LIST ON APPLICATION.

MARBLE AND STONE CUT TO ANY SIZE.
Masons will always find a large quantity of STATUARY SHELVES and other SLABS in Stock.
½-inch SICILIAN SLABS at 11d. per FOOT.

MARBLE BOX CHIMNEY PIECE
for £1 5s.
First-class Bed-room ditto, £1 10s.

FIRST-CLASS
TRUSS MARBLE CHIMNEY PIECES
from £2 5s. to £3 5s.

A WELL-CARVED
STATUARY CHIMNEY PIECE,
with 13½-inch Piers,
suitable for a Drawing-room, which must be seen to be believed,
FOR THE SUM OF £6.
Net Prompt Cash.

PRICE LIST ON APPLICATION.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR
DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.

Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.

Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.

The Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,

Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the Government members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been awarded, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a bad conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c., is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully requested to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and at lengths best suited to their roofs. The original works were the first ever roofing was made are F. McNEILL & CO.'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

TURRET CLOCKS, designed and constructed upon the most approved plans and of the very best workmanship and materials, at the lowest possible prices, for Cathedrals, Churches, Public Buildings, and Gentlemen's Mansions, Stables, &c., comprising Turret Timepieces, Striking, Quarter, and Chime Clocks. Windials made and fixed. Also Clock-dials adapted to the various orders of Architecture.

JOSEPH FAIRER,
188, St. George-street, East, London,
By Special Appointment to the Queen and to his late Royal Highness the Prince Consort, her Majesty's War Department, &c.

Maker of the Great Clock of the Tower of London.
The Village Clock, price 40 guineas.

DENT'S TURRET CLOCKS.—The attention of Public Bodies, Gentlemen, and others, is respectfully requested to the Improvements made in the Construction of CLOCKS, suitable for STABLES, CHURCHES, and other Large Buildings, by the late E. J. DENT and F. DENT, Clock and Chronometer Makers to the Queen and Prince Consort, and Makers of the GREAT CLOCK for the HOUSES of PARLIAMENT, &c. Turret Clocks, with Compensation Pendulum, adjusted for variations of temperature, to work the hands of dials of any size, from 1 foot to 20 feet diameter.

E. DENT & CO. 61, STRAND (adjoining Coutts's Bank); and 34 and 35, ROYAL EXCHANGE, LONDON.

INDIA-RUBBER MILL BANDS,
WASHERS for STEAM JOINTS, HOSE PIPES, and FLEXIBLE TUBING.
A STOCK OF THE ABOVE ALWAYS ON HAND.

JAMES LYNE HANCOCK,
VULCANIZED INDIA-RUBBER WORKS, GOSWELL MEWS, GOSWELL ROAD (opposite Spencer-street), LONDON, E.C.

The Builder.

VOL. XXII.—No. 1115.

Northumbrian Castles.

THE sturdy castles on the Northumbrian border must be studied as Mediæval fortresses; if we look at them in any other light, either as residences or ruins, we view them from a disadvantageous point of view. But, for the sake of a chronological arrangement of Northumbrian architecture from the earliest ages of which we have any evidence, we will approach them by a nearly obliterated trackway through Celtic times in their secondary character as habitations. The term castell is of late Celtic origin; of which castle, bastell, bastile, and pele, are the variations of successive races and periods applied to various forms of fortified buildings.

Architecture placed her foot in Northumberland at least some scores of years before History. Bede, the Saxon historian, who had access to the works of Pliny, Solinus, Orosius, and Gildas, deposes of Britain, generally, that "the island was formerly embellished with twenty-eight noble cities, besides innumerable castles, which were all strongly secured with walls, towers, gates, and locks:" but as this assertion may have been intended to indicate the days of the Roman occupation, we could come to no certain conclusion if written testimony were our only evidence of this fact; but in Northumberland there are the actual remains of Celtic towns and fortresses to be seen at the present day. It is sufficient for our purpose here to note that these early structures appear to have had but two forms, circular and oval. The Romans introduced the square or angular form of building, and the Saxons adopted their mode: for, when King Edwin built the church of St. Peter, at York, he built it square, as is especially mentioned in the Anglo-Saxon Chronicle.

The first Saxon building in Northumberland of which we have any written testimony is Bamborough. Against the date 547 it is written in the Anglo-Saxon Chronicle:—"This year Ida began to reign, from whom arose the royal race of Northumbria; and he reigned twelve years, and built Bamborough, which was at first enclosed by a hedge, and afterwards by a wall." After this there is frequent mention of the Saxon country-seats of the Northumbrian monarchs. Bishop Aidan was at the king's country-house, not far from the city of Bamborough, when he was seized with death. Mention is made of his having a church and chamber there, and of his frequent custom to visit other country-seats of the king for the purpose of preaching. The site of another Northumbrian regal seat is given in an account of the numerous baptisms performed by Paulinus. This prelate is described to have accompanied King Edwin and Queen Ethelberga to their country-seat at Adgefrin (identified as Yeavering, near Wooler), and to have stayed with them thirty-six days, baptizing their subjects. The Saxon narrative further states that this town was abandoned under the following kings, and another built instead of it at the place called Melmin (identified as Milfield, not far from the site of the battle of Flodden Field). At Adgefrin, which is at the base of the slope of Yeavering Bell, one of the Cheviot range of hills, there is a long low stone building of an oblong form, the walls of which are about 5 feet thick; this is supposed to be part of King Edwin's house, but beyond the rudeness of the masonry and thickness of the walls there is no clue to its identity. Scattered about, higher up on the hill-side, are various remains of circular stone-huts, which might, perhaps, with equal propriety be regarded as portions of the deserted town mentioned in the chronicle; but in neither buildings is the long and short work distinguished as Saxon apparent. This is the more important as a matter of architectural evidence, because the long and short work may be seen in the base of the tower of Whittingham Church, in the same part of the country. The extent of the population of a Saxon town may be approximated from the following figures:—"When King Oswy engaged in a war with the Mercians he vowed he would, if victorious, give twelve farms to the church, on which to build monasteries, as well as to devote his infant daughter to a religious life; and being successful he fulfilled his obligations. Six of these farms were situate between the Tyne and the Tweed, and each possession contained ten families. At the same time Bede estimates the population of the whole of the kingdom of Southern Mercians at 5,000 families, and states that the kingdom of Northern Mercians contained 7,000 families. We may strain our eyes and see a further faint indication of the nature of Saxon homes in the life of St. Chad, who, it is recorded, was accustomed to travel about on foot, after the manner of the apostles, and preach the Gospel in *towns*, *cottages*, *villages*, and *castles*; these, with the countless churches and monasteries founded in the Saxon heptarchy, give us an impression of extensive building operations singularly at variance with the limited number of workers.

Thus trudging slowly on through these distant ages, stirred with long seasons of wars with South Humbrians, and flecked with ravages and burnings by the Danes, we come upon the dawn of the energetic era of castle-building in Northumberland. The Danes appear to have come and gone without leaving any buildings to mark their occupation; they simply destroyed. Mr. Ralph Carr, writing of the Northumbrian dialect, states that they left no memorial of their presence even in the hypothetical nomenclature. But it is doubtless due to the Danes that we have so few remains of Saxon buildings in Northumberland. Bamborough and Lindisfarne suffered especially at their hands. With the Norman occupation, however, building occupations were renewed.

The writer of the latter portion of the Anglo-Saxon Chronicle, who says he had looked upon William the Conqueror and lived in his court, speaks of the number of castles he built. In his son's reign the nobles possessed many similar fortresses, and upon the occurrence of a conspiracy are reported to have gone each "unto his own castle, and manned it and victualled it as best he might." We hear of Bamborough again in 1095. This year, distinguished by the spectacle of a great number of falling stars, the Earl of Northumberland refused to journey to the court of King William Rufus, because that monarch would neither give a hostage nor pledge his troth that he should come and go in security as requested. To punish this contumacy, William marched into Northumberland and seized most of the earl's chief supporters, who were gathered together in a certain fortress, the name of which is not given. From this he proceeded to Tynemouth, where he invested the castle: this fell into his hands with its garrison, in which was the earl's brother. From Tynemouth Castle he proceeded to Bamborough Castle, which the earl defended in person. The chronicler says: "When the king found that he could not reduce him, he caused a castle to be built over against Bamborough, and called it in his speech *Malveisin*, which is in English 'the evil neighbour,' and he garrisoned it strongly, and afterwards he departed southwards. Then one night, soon after the king's return to the south, the earl went out of Bamborough towards Tynemouth; but those in the new castle, being aware of his design, pursued and attacked him, and they wounded him, and afterwards took him prisoner, and some of his followers were slain and some taken alive." Meanwhile, William had turned his steps to Wales, having heard that the Welsh had stormed a castle called Montgomery, and slain the defenders of it; but when he returned he ordered the Northumbrian earl to be taken back again to Bamborough, and there to have both his eyes put out unless his wife and steward would give up the castle. Upon this they surrendered, and the earl was carried back to Windsor Castle, to await the king's pleasure, where the chronicler left him without further mention. William Rufus built the fine Norman castle at Newcastle; but whether this was the Malveisin mentioned above is not likely to be ascertained. There are several sites of castles much nearer Bamborough, as at Holy Island and Belford, and the term is likely to have been applied to a more temporary structure.

Warfare appears to have been the inheritance of the borderers. The fact of the Scottish king having married a Saxon princess made the Anglo-Saxons ever turn their eyes towards Scotland as towards a possible rescue from their oppressors; and in later times, when the Anglo-Norman rule was accepted as an indisputable condition, and the Anglo-Norman nobles had built castles in Northumberland, the approaches of the Scots were as tenaciously resented. Sometimes the Scots made incursions as far southwards as the midland counties, burning and laying all waste before them, and, as we may be certain that the ravages were always repaid with interest, it will be seen that Northumberland stood in need of the strong fortresses with which the country is so thickly studded.

By the time that the youngest son of the Conqueror sat upon the throne, a great number of castles must have been erected, for the nobles were constantly shutting themselves up in them and defying their king; but it was in the reign of his grandson that the practice of castle building reached its height. The old chroniclers tell that every rich man built himself a castle and defended it against Stephen, "and they filled the land full of castles." They turned the whole population into masons and labourers, and when the edifices were completed with their compulsory labour, they imprisoned every one in them whom they deemed possessed of any valuable till it was given up. The gloomy tale of the chronicler, copied by monk after monk as the manuscript was borrowed by convent after convent, has been often quoted by historians, but it always reads as though told afresh by a horror-stricken witness. "Never were any martyrs tormented as these were. They hung some up by their feet and smoked them with foul smoke; some by their thumbs, or by the head, and they hung burning things on their feet. They put a knotted string about their heads, and twisted it till it went into their brain. They put them into dungeons wherein were adders, and snakes, and toads, and thus wore them out. Some they put into a crucet-house,—that is, into a chest that was short and narrow, and not deep,—and they put sharp stones into it, and crushed the man therein so that they broke all his limbs. There were hateful and grim things, called sachenteges, in many of the castles, and which two or three men had enough to do to carry. The sachentege was made thus: it was fastened to a beam, having a sharp iron to go round a man's throat and neck, so that he might no ways sit, nor lie, nor sleep, but that he must bear all the iron. Many thousands they exhausted with hunger. I cannot, and I may not, tell of all the wounds and

all the tortures that they inflicted upon the wretched men of this land; and this state of things lasted the nineteen years that Stephen was king, and ever grew worse and worse." One of the stipulations recorded by some authorities to have been made in the agreement between Stephen and his successor, was that the hundreds of castles built in his reign should be destroyed. It is this clue to a general razing and a more gradual rebuilding of castellated edifices in subsequent times, that induces amateur archæologists to assign the reign of Henry II. as the period of the erection of the most ancient existing castles; but with little reason. Northumbrian castles suffered severely in the contests between Stephen and his cousin Matilda, the daughter of his predecessor; for the first to draw sword in her favour was David, King of Scotland. He crossed the borders and reduced Carlisle, Norham, Alnwick, and Newcastle, in rapid succession.

There is documentary evidence of the existence of thirty-seven castles in Northumberland, at the date of the civil wars between the houses of York and Lancaster, and architectural evidence of the existence of others not mentioned in the document referred to, of which Widdrington, Nafferton, Cartington, and Holy Island are examples. Of this large number a few must be attributed to the Norman era, and several to the earliest transitional period, but most to the Edwardian age. All of them bear marks of continual reparations, proving the rough service they were accustomed to see. We may gather from the writings of Richard of Hexham, Jordan Fantosme, Froissart, and Barbour, that the most important of them stood several sieges.

In 1095 William Rufus besieged Tynemouth castle, and then proceeded to Bamborough, which he was not able to subdue, as we have seen.

In 1173 William King of Scotland besieged Harbottle, and in 1174 Prudhoe and Alnwick castles.

In 1215 King John set fire to Wark, Alnwick, Mitford, and Morpeth castles.

In 1216 the town and castle of Berwick were besieged.

In 1217 Alexander of Scotland besieged Mitford Castle for seven days.

In 1244 the Scots besieged Prudhoe Castle, but were compelled to raise the siege.

In 1296 Harbottle castle sustained desperate, reiterated, but unavailing attacks from numerous armies of Scots.

In 1315 Dunstanborough Castle was besieged by Lords Wenlock and Hastings, and left a ruin.

In 1385 the Scots besieged the castles at Ford, Wark, and Cornhill.

On the 1st of July Henry IV. besieged Warkworth Castle, which held out till the king's artillery was brought to fire upon it, and then, at the seventh discharge, yielded.

In 1462 Alnwick Castle, defended by Peter de Brezé, for Queen Margaret, was besieged by Sir Ralph Gray, Lord Hastings, and Sir John Howard.

Within a few months from this date Warkworth was besieged by the Earl of Warwick; Dunstanborough by Lord Fitzhugh, Lord Scroop, Lord Greystocke, and Lord Powis; and Alnwick castle by "my Lord of Kent, my Lord Harry, my Lord Scalys, and many other knights and squires," says a document printed in the *Excerpta Historica*, and Bamborough castle by the Earl of Worcester and the Lords Montague, Strange, Say, Grey of Wilton, Lumley, and Ogle. Bamborough surrendered on Christmas-day, 1462, and Alnwick twelve days afterwards. And, finally, not to needlessly multiply instances, James IV. of Scotland besieged Norham Wark, Ford, and Etal, on his march southwards, before the battle of Flodden. If we add to this list that the county likewise witnessed nineteen battles in the course of five centuries, besides the minor frays that were of every-day occurrence, we shall realize somewhat of the nature of the services performed by these stalwart fortresses, and of the military pomp and pageantry they saw and heard,—the flutterings of pennons, glistening of arms, clattering of horses' hoofs, clinking of horses' trappings, resonance of warcries,—in the days of their pride.

The castles of Bamborough, Berwick, and Newcastle, subject to the fortunes of war, were held by the Crown. Of these, Berwick has been razed to the ground to make room for a railway station; Newcastle, after doing duty as a county jail for some years, now holds the collection of the Newcastle Society of Antiquaries; and Bamborough is the seat of what is locally known as Lord Crewe's Charity. (Nathaniel Lord Crewe, Bishop of Durham, by his will, dated June 24th, 1720, left the manors of Bamborough and Blanchland to certain trustees and their heirs for charitable purposes; and these trustees make the castle their official residence for the purpose of carrying out the good prelate's injunctions.) In the reign of Henry II. the Crown held the manors of Bamborough, Corbridge, Newburn, Rothbury, Warkworth, and Tividale; but so uncertain and short-lived was the regal tenure from various causes, that King John could only boast the ownership of Bamborough. Henry VIII., rich in confiscations, caused a survey to be made of the castles of which he counted himself lord. They were Harbottle, Bamborough, Dunstanborough, Alnwick, and Warkworth. This survey was made by Robert Collingwood and John Horslye, esquires, "with dyners artificiers with them."

The amber-grey castles at Alnwick, Warkworth, and Prudhoe, with their ever-changing aspects as they are lit up with sunshine or darkened with cloud shadows, the grand, rugged, jagged, veritable storm-eaten fossils of romance and history, are in the hands of the present representative of the ancient Percies, the Duke of Northumberland. Of the extensive alterations at Alnwick, and the partial repairs at Warkworth, our readers have been carefully informed. Of Prudhoe Castle there are considerable remains. A portion of the keep, with the surrounding curtain-wall, and the entire gatehouse, with its chapel on the upper floor, are still standing.

Earl Tankerville possesses Chillingham and Dunstanborough castles. The former of these was transformed into a residence in Jacobean times, and is now chiefly noticeable as a specimen of the architecture of that period; the latter is a bold fragment of Transitional character, standing, all rent and riven, on a high rock on the north-eastern shore. A crevice in the rock on which it is built admits the sea within the very precincts of the castle, and there it ebbs and flows, and the spray splashes, and the foam leaves white wreaths upon the dark fringes of seaweeds night and day.

Traces of Twisell Castle may be picked out enclosed in the pretentious modern shell commenced, but abandoned before completion, on its site. Of Norham Castle there are more important remains. The keep is standing, though in ruins; and much of the curtain is *in situ*. A portion of the keep of Etal Castle is standing, as well as the principal gateway. A ragged fragment of the keep of Edlingham is all that is left. The site of Wark Castle is known only by the green mounds covering up the fallen masonry. Of Mitford Castle a small portion of the keep and two posterns are standing. They are of the earliest transitional period. The materials of the ancient castle at Widdrington were used to build the modern imitation castle, built near its site, some half century ago. (The Mediæval men set this example by building their castles out of Roman remains. Thirlwall Castle is built, principally, of Roman materials furnished by the great Roman wall. And Philip de Ulecote's Castle at Nafferton, now but a broken shell, was built with stones taken from the same quarry. But the use of Mediæval remains for modern house building is, of course, none the less reprehensible.)

Ford Castle, another of the strongholds of border romance, has suffered much by fire as well as war; and has very recently been once more in jeopardy. We shall be understood when we remind our readers that it was at Ford Castle that Dame Heron is recorded to have fascinated James IV. of Scotland, and delayed him by her arts from the prosecution of hostilities till Surrey gained time to march his army into the field, with the fatal result that took place at the battle of Flodden. It is, essentially, an English castle with a pedigree as satisfactorily made out as that of an English nobleman. Sir William Heron obtained leave to crenelate in the twelfth year of the reign of Edward III.; and, after the battle of Flodden some of the damages were made good, as appears by a survey dated 1542. It was subsequently, and accidently, set on fire; but about a century since was rebuilt in the form of a centre with advancing wings, in which were incorporated two of the ancient towers. With these thoroughly and distinctively English antecedents, the present owner, the Marchioness of Waterford, recently placed the structure in the hands of a Scottish architect for improvements. With an almost pardonable national preference, the way to beautify an English castle appeared to be to transform it into a Scottish one; and, accordingly, certain turrets of a Scottish type were soon in course of construction, to the great consternation of the county archæologists. It is with pleasure that we add that the noble owner subsequently acquiesced in the removal of ornamentation so antagonistic to the character of this peculiarly interesting edifice.

It is, as we first mentioned, as fortresses that these border strongholds should be studied; the contrivances resorted to by besieged and besiegers producing most of their essential features. The minor details of defence should be sought out. At Warkworth, for instance, where the old Earl of Northumberland is represented by Shakspeare to have lain "crafty sick," we may see in a portion of a curtain wall the spaces through which were threaded the beams that supported the wooden galleries temporarily erected on the parapets to enable the besieged to prevent the besiegers from approaching the walls. In the abbey-gate at Alnwick we may see the machicolations through which the besieged threw stones or swung chains of burning flax dipped in sulphur to stifle the assailants; and in various parts of Alnwick castle the crenelles show the hole and groove worked in their sides to support the wooden flap or shutter with which each embrasure was furnished. On the Lilburne tower at Dunstanborough Castle there are curious corbelled machicolated projections for harassing assailants. And in all of them we are met unexpectedly with contrivances of unsurpassed ingenuity, details of quaintest severity, mouldings, corbellings, carvings, groinings worth sketching.

Grievous it is that the shadows of Northumbrian castles should ever be less. But, in truth, there are many of these picturesque and suggestive relics that are fading from the landscape; some for want of a few bonding stones, others through mere wantonness. Their rise and fall is, however, a fate that has been shared by empires. May sea-green lichens ensbroud them lovingly.

SERJEANT PAINTERS TO THE CROWN.

A LIST or catalogue of "Serjeant Painters to the Crown" has long been needed by all who take an interest in English art. I am not aware that the task I undertake has hitherto been attempted; but the labour has had its reward, and my catalogue of Serjeant Painters to the Crown will be found to contain names of note among British Artists.

The first of whom I read bears a poetic name—George Gower,—to whom, as "Serjeaunte Painter," a payment was made, in 1575, for—

"Painting the great diall at Hampton Court, containing the howres of the day and night, the course of the sonne and moone, the xij signes with the caracters of the vij planetes, environed into a circle, the sea, shippes and territories, and on the other side certain badges of the croune, all wrought in oil colours, as vermilion, &c., and guilded with fine goulde; for clensinge the sconce diall conteyninge the howers of the daie, half howers, and q^rters, and in divers places her Mat^ties of name, and sondrie her Mat^ties badges, wrought likewise in oyle colours and guilded with fine goulde."

A further payment in the same year embraces all my remaining knowledge of Serjeant Painter Gower:—

"To George Gower, for stopping, priminge, and paintinge with sondrie colours in oyle, as white leade, vermilion, blew and green, xxiiij timber beastes carved with escutchons cont sondrie badges gilded with fine goulde, viz., viij of them for the greate garden, and xvj for the mounte garden, with xxiiij postes to them at xxx^s the beaste.

And more to him for paintinge one ende of the roof of the grene court with a frette of masonrie, cont sondrie badges in fine coulours, as vermilion, blewe, and grene."*

The next, in point of time, of whom I have been able to learn the name and something more, was Leonard Fryer, Serjeant Painter to the Crown, at Queen Elizabeth's death, in 1603, and until his own death, in 1606. Fryer was more than a house-painter,—he could repair and touch and cleanse as well as any Seguier or Farrer among us. The payments he received will best explain the nature of his employment:—

"To Leonard Fryer for altering a picture in the chapel at Whitehall, and made it [*sic*] Joseph with a subscription to it,—xl^s."

"To Leonard Fryer for touching and cleansing of the picture of O^r Ladie in the chapple,—v^s."

"To Leonard Fryer for laying upon canvas in the ceiling of the great Banquetting House

* These payments were first printed in the edition of the "Hampton Court Guide" carrying Mr. Edward Jesse's name under an Owen Jones cover. The latest editions of Mr. Jesse's "Hampton Court" and Mr. Jesse's "Windsor and Eton" (in which these payments were first printed) were *wholly* rewritten by the writer of this note.—P. C.

532 yards square of worke called the clowdes in distemper, at x^{d} the yarde square."

The clouds were required for a masque at court, —one of those truly royal entertainments, in which King James and his queen, and his son, Prince Henry, employed the united talents of Inigo Jones and Ben Jonson.

Serjeant Painter Fryer made his will on the 27th September, 1605. He describes himself as of "St. Botolph's without Aldgate;" mentions his two sons, Perceval and Leonard, and his married daughter Alice. His wife, Catherine, he leaves his sole executrix.

Fryer was succeeded by his deputy, John de Creetz, a well-known Walpolean name. The following payment to De Creetz will explain the varied nature of his duties as Serjeant Painter to the Crown.

In the Works Accounts of the Crown for 1622-30, I found the following entry:—

"To John De Creetz, for paynting the chimney-piece in Mr. Carey's bedchamber wth fayre white in distemper, and paynting uppon the fronte thereof the storye of Æneas carrying Anchises out of Troy, wth the scroules on each side of the front paynted to expresse them as they were carved,—xl^{s}."

The Carey of this poetic chimney-piece was Thomas Carew, the poet, one of Vandyck's sitters,—the same Tom Carew who is poetically taxed by Sir William Davenant with bringing, by the charms of his society and song, common faces into poetic and court repute.*

The Accounts for a previous year (1628-9), contain the following entry:—

"To John Decreetz, Serjeant Painter, for drawing several draughts of the designe of painted glass for the Great Window in the Chappell at Greenwich,—iiij^{li}."

In the Accounts for 1632-3, we find him "repairing" and "mending," and doubtless with a loving and careful hand:—

"To John De Critz, for repayring and mending two great pieces of paynted woorke that were done by Palma, th' one being the story of David and Goliah, th' other of Sawles coversion, which were much defaced,—c^{s}.

To the same for repayring, mending, and new varnishing vij^{ten} of the Great Emperours heads that were done by Titian, being likewyse much defaced,—lxx^{s}."

It was for this set of Titian's Cæsars that Vandyck painted a twelfth Emperor to complete the set in the room of one which was spoiled and left at Mantua.†

Titian's many admirers will not dislike to hear more about the famous twelve Cæsars of the great Venetian. Under the year 1632 the Serjeant Painter was paid as follows:—

"To John Decritz, Serjeant Painter, for paynting xij picture frames being vj feet one way and iiij feet th' other way, for pieces or pictures of Emperours Heades that were done by Titiano, paynted over in a sad wallnutt tree cullour, and guilding over those fframes in divers places wth fyne gold in oyle, and one broad carved edge next all above the picture, together wth the maske heades, festons, draperyes, the greater flowers and the lesser flowres, the greater and lesser scrowles, and the edges betwixt the flintes, all guilt with fyne gold, and varnished with the best varnishe, at lx^{s}. the piece,—xxxvj^{li}."

Many of the frames of King Charles's pictures were of a sad lute colour, and of walnut-tree colour, varnished with an interior moulding of broad plain gold. These minute but interesting particulars I learn from the Crown Accounts of the time, and their publicity may assist in identifying more than one lost picture known to have belonged to the collection of the Royal Martyr.

John de Creetz, Serjeant Painter, made his will in the year 1641, and died "full of years" in 1642. I have seen his will. He leaves three pounds to the poor of St. Andrew's, in Holborn, the parish in which he records he had lived for thirty years. He had been twice married, and had children by both marriages. His wife Grace he leaves his sole executrix, and desires to be buried in the church of St. Martin's-in-the-Fields, the church of the parish in which he was living when he made his will. For his eldest son, John, he had obtained, he tells us, the reversion of the office of Serjeant Painter. The state of England, however, between 1642 and 1660 offered little employment for the fine arts, and the name of John de Creetz, the second, is unrolled in records.*

That arrears of money were due from the Crown to De Creetz at his death, no one conversant with the history of England under King Charles I. will be surprised to learn. Here is ample evidence, were other wanting, transcribed direct from the original warrant. Need I add, that it it published for the first time?—

"By Vertue of an Ordinance of both Houses of Parliam^{t} of ye xxj day of September, 1648: Theis are to will and require you Out of such Threasure as now is, or shall be remaining in your hands, to pay unto Mrs Frances Decritz daughter of Mrs Grace Decritz deceased Relict and Executrix of John Decritz late his Maties Seriant Painter the some of Tenne pounds in prte of what moneys are due from ye King to her said Mother; and to be disposed off for ye burying of her. And for so doing This togeather with her Acquittance for ye Receipt thereof shall be your warrant and discharge; And also to ye Auditor Generall to allow ye same in your Accompt. Dated at the Committee of Lords and Commons for his Maties Revenew sitting at Westminster ye xxviijth day of November 1648.

"P. WHARTON

HEN: MILDMAY
DENIS BOND
JOHN TRENCHARD
W. ASHURST
COR. HOLLAND.

To our very loving ffriend
Thomas ffanconbridge, Esqr
Recevor Generall of the Revenew."

On the reverse side of the paper is the following receipt:—

"Vicesomo octauo die Novembr 1648.

"Receved by mee ffrances Decritz of Thomas ffanconbridge, Esq. Receuor Gen'all of the Revenue the some of tenne pounds According to warr^{t} within wrytten I say Rec^{d}.—x^{li}.

"FRANCES DECRIEZ."

That De Creetz was succeeded by his son I learn from Aubrey, and from no other source. Aubrey's anecdote is worth quoting:—

"Mem. Mr. Emanuel Decretz (Serjeant Painter to King Charles I.) told me in 1649, that the catafalco of King James at his funerall (wch is a kind of bed of state) was very ingeniously designed by Mr. Inigo Jones, and that he made the 4 heads of the Cariatides (wch bore up ye canopie) of playster of Paris, and made the drapery of them of white callico, wch was very handsome and very cheap, and shewed as well as if they had been cut out of white marble."†

There is an engraving of this "catafalco." It has Inigo's touch—no common touch—about it.

The Restoration witnessed the revival of the office of Serjeant Painter in the person of Sir Robert Howard, son of the Earl of Berkshire and brother-in-law of Dryden. Sir Robert resigned the office for the far more lucrative appointment of Auditor of the Exchequer; and Robert Streater succeeded, by patent dated 15th April, 1663, and, as I presume, by purchase, from Sir Robert. In the "Works Accounts of the Crown," at Greenwich, in 1661-2, when Sir John Denham, the poet, was Crown Surveyor, and Christopher Wren, aged 30, his attendant, afterwards successor, is the following entry:—

"To Robert Streater for mending the ceiling piece which came from St. James's House, being xj^{ten} foote diameter, —lxx^{s}."

Mr. Jay, who has been long successfully engaged in compiling a history of Greenwich, can possibly identify this ceiling-piece picture. Perhaps it is known to Mr. Bolton Corney, who passed so many of his "summer" days in the service of the Royal Hospital; or failing either of these gentlemen, perhaps my old friend and master, and now a commissioner of the Hospital, Sir Richard Madox Bromley, K.C.B., will have the books of the Commissioners examined for a purpose at once historical and artistic.

"Serjeant Streater," as he was called, died at his house in Long-acre,—among the coach-painters,—in the year 1680, and was succeeded as "Serjeant" by his son; who was again succeeded, first by Thomas Highmore, the "Serjeant Highmore" of Walpole (note to Walpole by Wornum, p. 706), then by John Thornhill,‡ son of Sir James.

The office has long been extinct. In another communication I shall have something to say about "Limners in Ordinary to the Crown," and "Principal Painters Extraordinary to the Crown."

PETER CUNNINGHAM.

* More than one reader of "Notes and Queries" should surely be able to tell us when Carew died! I have not been idle (commencing twenty years ago), but I have been unsuccessful.

† Walpole, ed. Wornum, p. 324.

* Walpole says (Wornum, p. 351), that Dobson was appointed Serjeant Painter on the death of Vandyck. Mr. Wornum does not notice the double mistake of his author.

† Aubrey's Lives, iii. 412.

‡ Walpole, ed. Wornum, p. 665, calls him "James." Walpole's editor has failed to make the required correction.

THE IRISH INDUSTRIAL EXHIBITION, 1864.

ABOUT twelve months since a project was set on foot by the Committee of Manufactures in connexion with the Royal Dublin Society,—an institution endowed by Government, and having for its ostensible object the development of Ireland's resources; more, in fact, than its title signifies. With the object of testing and comparing the progress made by the different parts of the country in their respective manufactures, it was their intention that work solely of Irish production should be introduced: this they have failed to effect, as in many departments may be observed works of across-Channel parentage: even France is not unrepresented. This may be attributed, in a great degree, to the fact that it is intended to hold an international exhibition, —consequently on a larger scale, -in 1865, for which, may hap, the principal Irish manufacturers, few of whom are now properly represented, are reserving their more important improvements. It has been considered not advantageous to have international exhibitions too frequently: to such fault the Royal Dublin Society cannot be considered open: the last Exhibition held was in 1853, and far eclipsed all others in Ireland before or since. That event, however, was not owing solely to the exertions of the Royal Dublin Society; for although they may have had the will, they did not possess the means. It remained for a man, now well known, and who for many years will be remembered as a benefactor to his country, to undertake the burden of the expense, and give rise to an Exhibition which has proved so productive of good results. Previously to that occasion, for some time it was customary to hold triennial exhibitions of manufactures; but after the comparative magnificence of the Great Exhibition of 1853, it was not thought advisable, at least for some years, to revive them. In 1861, was held the first of a new series,—and it appears to be the general wish to continue henceforward to hold them,—a permanent exhibition place; that, in connexion with the Winter Gardens, now in course of erection, having been devised with this object in view.

The present Exhibition, although somewhat poor when compared with that of 1861, yet shows considerable progress in many branches of manufactures. It is also in some respects one to be remembered in connexion with the introduction of new and improved manufactures in this country,—among them cotton weaving and printing, linen-printing, the manufacture of porcelain and other earthenwares; its mining productions; also for its show of new and improved machinery, of Irish manufacture.

The building occupied by the Exhibition is that originally erected for the purposes of the Agricultural Museum, where annual exhibitions of agricultural implements and produce are held. This was found rather small for the accommodation required by all the applicants for space, who swelled to so large a number, that it was found necessary to cover in a large yard, called the Shelbourne-yard, at a cost of about 1,400$l.$, and which is now appropriated to the display of machinery chiefly in motion. The whole has been re-decorated for the purposes of the Exhibition, and proves very suitable to its purpose. It consists of a central hall, 235 feet by 110 feet, divided into three distinct galleries,—or, more properly, a nave and two aisles,—the aisles separated from the centre by two rows of columns, enclosing sufficient space to give good courts below, and a commodious gallery above. Thence, at a higher level, spring the curbed or arched ribs of the roof,—the centre of which is decorated in red, blue, and white.

The aisle to the south is set apart for the picture-gallery, and is well lighted and otherwise suitable. Farther south is a wide corridor, converted to the purposes of a first-class refreshment-room, in which also are some exhibited manufactures. Through this, also, is reached an open enclosure, containing some articles,—such as a portable house,—suitable for Australia, cars, and agricultural implements; and one or two monuments and memorial crosses.

The Exhibition will be open for six months, and good results are anticipated.

Of building materials, or any matters immediately connected with building, the show is

poor, if we except some excellent ranges and stable-fittings; slates from Killaloe, Carnew, and other Irish quarries; roofing and flooring tiles of improved design and manufacture; and a tolerable display of the beautiful polished marbles that Ireland can with confidence boast.

There are exhibited some commendable specimens of carving in wood and stone. We may mention among them some chimney-pieces, by Sheppard, Hibson, and Brooks. But with regret we must note that the absence, too often found in such matters, is apparent, we do not say in all cases, of a directing mind to arrange tastefully, and know where to stop. It is greatly to be regretted that good workmanship should be as it were thrown together, where part ought to be made to suit part. The same remarks may be applied to the display of carved oak furniture, of which Messrs. Arthur Jones & Sons, amongst others, contribute some good examples. In this department we think we detect the hand of the French artist: perhaps we unwittingly pass a high compliment on some unknown Irish workman, and hope it may be so.

There are some specimens of carpentry, machine-made, and a few samples of church furniture, of so-called Gothic design, where it is to be feared that Peter Nicholson or other such authority in architecture has been the oracle consulted. On the characteristics of Gothic architecture it is all through very observable that manufacturers shrink from the employment of the educated artist or architect as the designer of their wares, as though these were matters too trifling to require his aid, or were beneath his notice. It is no wonder, then, that in these matters they are far behind the London manufacturers, whence, in consequence, are necessarily brought all articles of furniture of really good design. Here we have no such excellent designs or workmanship as those of Hart or Skidmore, except such as are had direct from these firms, and incorporated with productions honestly Irish. There is no church furniture like that of Peard & Jackson, and other London makers. An excellent organ by Telford, of Dublin, is placed on a gallery of somewhat small size, arranged as an orchestra, at the east end of the main hall, where room also may be found for suitable decoration.

Of stained glass a few specimens are sent (of which we may not inquire the nationality), in some instances of good design.

There are a few specimens also of parquetry.

Nothing shows any progress in design or excellence of paper-hangings or painting.

In the southern aisle, which, at each side is arranged into small courts or stalls, we meet with some good specimens of ironwork applied to domestic purposes. In the stall of Messrs. Edmundson, are a range, with cooking apparatus complete; portable gas apparatus, wash-stands of iron, a well-executed chimney-piece, iron and brass work. This firm also exhibits one of those objects of most unusual interest in an Irish exhibition. Heretofore, lighthouses have had to be supplied with their light-rooms by English manufacturers. In this exhibited article, — which, by the way, takes up considerable room close to the entrance to the building,—we have one of three which are the first wholly manufactured in Ireland. The frame is of iron, brass-mounted. The inside of the lower compartment will be lined with polished mahogany.

Messrs. Perrot & Sons, of Cork, exhibit some good ranges, combining improvements, for which they hold a patent. A peculiar device is their hot-air roasting-jack, by the use of which there is no need of winding up, the spit being turned by the action of the air playing on a fan, and is regulated by the opening of a register, immediately above an inclosed or roasting space, where the meat may be cooked by the hot-air circulating around it, the roaster having large ventilators directly into the fire itself, and through the same aperture the fire radiates at once into the roaster, securing thereby two advantages, viz., a perfect rosster and a kitchen free from smother. A material amount of superiority is claimed in its economy of fuel, the fire not having to operate through a casing of brickwork, being close to its work.

The Messrs. Musgrave, Brothers, of Belfast, have sent a display of their own patented stable and other fittings; among them their slow-combustion stoves, now much used for heating churches, schools, and conservatories, for which they are well adapted, they at the same time being recommended for their economy. Their stable-fittings are amongst the most complete seen in Ireland. We have, indeed, reason to believe that they will come into general use where the health and comfort of the horse are studied.

The Messrs. Riddel, of the same prosperous town, have also sent stable and cowhouse fittings, which, for completeness and economy, challenge competition. Here, also, are ranges suitable for houses of all sizes.

The Messrs. Hodges have, in the south aisle, a complete kitchen, with fittings. Exhibited by this firm, also, are some good vesta-register-grates, with chimney-pieces to match.

Mr. Maguire also contributes some kitchen-ranges of neat and economical construction.

The Mining Company of Ireland exhibit a large case of lead in its various stages of manufacture, from the ore to lead pipes, with models of the machinery used in the operation.

The Killaloe, Carnew, Ormonde, and Gounadoo Slate Quarries send specimens of slate of all the usual sizes, which, if we except a tendency to brittleness, bid fairly to injure the prospects of the Bangor quarries, whence till recently most buildings in this country obtained their covering.

Some good examples of roofing and flooring tiles, coloured bricks, black, red, and buff tiles, ornamental crested ridge tiles, stable gutters, and flooring tiles, moulded and chamfered bricks, are sent by the proprietor of the Gardenmorris Tileries, county of Waterford. There are also from the same place some pretty vases, of unusually good design, very suitable for decoration of ornamental gardens.

Specimens of draining tiles and other similar earthenware appliances, with perforated and compressed bricks of a pleasing red colour, and recommended for durability and as a good facing brick, are contributed by Fraser & Co., of Belfast.

S. Vincent & Son, ironfounders, Church-street, Dublin, exhibit some iron appliances for buildings, in the form of geometrical staircases and ornamental balustrades, which deserve notice.

We may return to the examination of a few of the more important manufactures; but as a suitable channel through which to approach the Fine Arts Department, we must first mention the few, very few, architectural drawings that are hung, one here, one there, as though they were matters of little moment. Such however, as are exhibited show advances in the right direction. It is a matter for surprise, as well as regret, that there is not a better show; for it is now well known that Dublin at least can at short notice call together a collection not at all contemptible.

Amongst those here exhibited, there are an elevation and a plan of Cork Cathedral, now being carried out from the design and under the superintendence of Mr. W. Burges, of London. Mr. J. J. M'Carthy also sends some well-coloured views of ecclesiastical and other buildings erected by him; and Mr. W. Fogerty some drawings in perspective and isometric projection, to illustrate his design submitted in competition for a County Lunatic Asylum. Mr. Jones also sends three views of the Winter Garden now in course of construction. These exhaust the works of this kind of which mention need be made.

A fine-arts gallery was indeed an afterthought of the committee; and he who enters this gallery with the hope of being truly informed of the position of the fine arts in Ireland, will meet with disappointment, for two reasons: some of the best works are contributed by Belgian and Dutch artists, with a few lent from the collection at the South Kensington Museum; while Irish artists send few good works except those which have been exhibited frequently before. This we may not be wrong in attributing to the commendable disposition to support more especially the national Exhibition annually held at the Royal Hibernian Academy, now shortly to open.

The collection of paintings is limited, and may not exceed 400 in number.

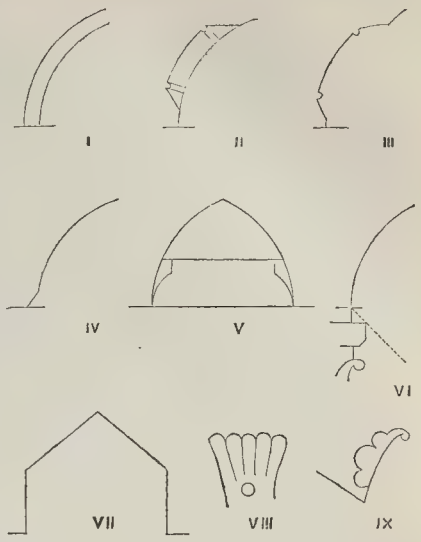
Application was made for a few specimens from the Sheepshanks and Vernon collections, but these were, it is stated, somewhat ungraciously refused. It may have been with the hope of testing what will arise out of the experiment of throwing on their own resources the Irish artists, who, indeed, ought not to require any such help in the formation of a collection.

Sculpture is totally neglected, if we except what we may find in the shape of foliage and birds on some of the chimney-pieces, sent by Hibson and others, and those specimens which the founder and silversmith have enlisted for the display of their wares.

Amongst a number of works by such men as Gainsborough, Reynolds, Callcott, Leslie, Ross, Cope, Landseer, Eastlake, &c., notwithstanding the drawbacks that exist at present, some Irish artists have secured a respectable place in this Exhibition. There are a few landscapes by J. B. Marquis, W. M'Evoy, Watkins, Duffy, and some others, whose handiwork is well known by those who, year after year, frequent the exhibition of the Royal Hibernian Academy.

T. Bridgford has some excellent pieces of drawing and colour. These amongst many others are unmentioned in the catalogue, which, with one or two exceptions, is very well got up. Catterson Smith exhibits some good portraits, in the clear colouring that is admired in the portraits of this master. M. Angelo Hayes exhibits a few of his recent pictures, in which he gives good evidence of his power in animal portraiture, especially two companion pictures of circular form, situate in the compartment allotted to water-colour drawings.

THE MODERN DEVELOPMENT OF MEDIÆVAL ART.*



SOME short time since, my friend Mr. Seddon, the secretary of the Royal Institute of British Architects, wrote a paper which was read at that Institution, and which caused no end of an outcry. The subject of the paper was essentially the same as mine and the ostensible cause of the outcry was the cutting and humorous names he gave to certain modern developments of Mediævalism, to say nothing of sundry hard hits at what is generally, and perhaps facetiously, called Classic art. But, although much decried, Mr. Seddon's remarks were perfectly just, and the terms employed in his paper were probably far too amusing to fall into oblivion. I have not the least doubt, however, but that his remarks will do a very great deal of good; for there are many persons who are perfectly proof against any amount of good advice, but who quail before ridicule. Mr. E. Godwin, of Bristol, has also made some very true observations about the present state of Mediæval art, in a paper lately printed, which was read before the Bristol Society of Architects. He also has treated the subject in a humorous manner. But the fact is that the matter is an extremely serious one, and as I by no means wish to pay you the poor compliment of supposing that you are only to be convinced by ridicule, I propose to consider the matter in a serious manner; for, after all, the Association is the future life-blood of the profession, and if you do not correct your errors, or if you get into a bad way, what hope can there be for our future architecture?

It will be observed that I confine my remarks to the modern development of Mediæval art. By this I by no means wish to imply that the so-called Classic development is more perfect. On the contrary, it contains just as many if not more faults than our modern Mediæval art does, and, if I do not speak of it, it is simply that I really do not care what becomes of it. The architecture of Greece was most exquisite; that of Rome was coarse, but magnificent: both glowed with colour, but both are unfitted for our climate. What is called Italian appears to me to be simply a grouping together of Roman details, often very much misapplied, and utterly unlike anything imagined by an ancient Greek or Roman. But I need scarcely enlarge on this point, for it seems now to be almost generally recognised that some architecture founded upon that of the Middle Ages is the most suitable for our climate, and it consequently attracts the attention of the younger members of the profession, so much so that all the designs for the prizes of the Institute on the last occasion were Mediæval.

The story of the revival of Mediæval art has been so often and so well told that it is almost superfluous to go into it on the present occasion, so that a very few words will suffice. It might almost be doubted whether Mediæval art has ever been thoroughly disused in England; thus we have the chapel in Lincoln's-inn by Inigo Jones, in which an attempt was made to go back to the Geometrical Decorated style. The piers of one of the arches of old London-bridge were rebuilt in what was then called the Gothic taste. Batty Langley and Horace Walpole did their very worst with the art, inasmuch that their works have become by-words. The curious part of the matter is, that they have some grotesque resemblance to late Italian Mediæval art, or, rather, the latter is the only thing that they at all approach. Nor did Sir Christopher Wren

* By Mr. W. Burges, read at the Architectural Association.

snoceed much better. Witness his western towers of Westminster Abbey, and his wretched restoration of the great portal of the northern transept, which latter I most sincerely hope to see in the hands of my friend Mr. Scott, it being a far more crying deformity than anything inside. Indeed, had I the honour of being the architect to the dean and chapter, I should certainly give my clients no peace until they allowed me to remove so great an eyesore in one of the most conspicuous places of our metropolis. To resume our subject, Mediæval art owes its present revival to the labours of three individuals, viz.—Rickman, Blore, and, above all, Augustus Welby Pugin. The first did us the great service of distinguishing the various styles, and publishing books to guide our researches.* The second, who is one of the most minute and beautiful architectural draughtsmen the world has ever beheld, throughout a long and active practice erected numerous buildings with correct detail. But it was reserved to A. W. Pugin to wake us up by his enunciation of true principles; and although his sharp satire doubtless hurt many people's feelings, it did immeasurable good to everybody in the profession. But Pugin was only one man, and the most gifted of us can only do a certain amount of work. It was, therefore, lucky that about this period the subject was taken up by the much-abused Cambridge Camden Society, and right well they did their work: by means of patient investigations of our parish churches, and by means of most unsparing sarcasm, they at last drilled architects into building churches by recipe. No one at the present day does build a bad church,—I mean such a church as we but too often saw some twenty years ago; and, therefore, let all honour be given to the Camden, now the Ecclesiological Society. A few words ought to be said as to the different styles of Mediæval art in which all these different teachers worked. Thus we have seen Inigo Jones leaning towards Geometrical Decorated and Rickman and Blore went in for the Perpendicular. The majority of the Peel churches was built in Early English, because, as Mr. Hope most truly observes, that style was supposed to survive more starvation than any other. Pugin practised in many styles, but his *forte* was in French Flamboyant, although converted from it by my esteemed friend Dr. Rock. The Ecclesiological Society enjoined Decorated. Now, all this was mere architecture, or, rather, the bones of the building without the flesh. Mr. Ruskin arrived to supply the deficiency, and to point out the intimate connexion between good sculpture and good architecture; he also directed people's attention to the beauties of Early French Gothic, and afterwards to that of Italy, although I am afraid that his lessons in the latter have hardly been understood as they should have been. Much, very much, is to be learnt from Italian Mediæval architecture, but its details by no means suit it, either for our climate or materials; and although certain things may look exceedingly well executed in marble in the half-Oriental town of Venice, it hardly follows that they should do so executed in soft stone, and placed in a street of some provincial town. So much is this the case, that I am half afraid that nearly all our faults in modern architecture may be traced to the misuse of Italian examples. Of course Italy is a delightful country to study in, and replete with all sorts of associations, and it is far more pleasant to make a tour which shall include Florence, Venice, and Rome, than to spend week after week in a dull town like Chartres. When, therefore, it was found that Mediæval art could be studied in Italy, students of the new school flocked thither, and, wishing to bring back telling sketches (the curse of architecture), copied the details which ought not to have been copied at all, forgetting to study the great broad masses, the strong unchamfered angles, the beautiful figure sculpture, or the wonderful frescoes. It may be asked, What has an architect to do with sculpture or frescoes? I repeat, that unless he can give small drawings sufficient to show what groups or figures he wants, and what those figures are to do, he only knows one-half of his profession, and has only half a claim to be considered an artist. The same with regard to the frescoes: he should know how to dispose of them in the building; how to separate them by bands; how to allow for height of situation; and, in fact, be able to give every assistance to the painter actually employed in their execution, and for all this he must know how to draw the figure tolerably; but if he has studied these things, and can draw the figure tolerably, he will be able to make the building interest the spectator, and tell wondrous stories, without a moulding or piece of foliage in his architecture. It was to this that Mr. Ruskin alluded when he said that a square yard of stone was sufficient for any man to show what was in him, and, so far as I may be permitted to say so to such an authority, I consider Mr. Ruskin to be thoroughly in the right. If a man cannot do the things above enumerated he takes refuge in foliage, notches, chamfers, and other specimens of misapplied ingenuity, and when the work is done it is never satisfactory: it tells no story, and the beholder grieves that the same ingenuity had not been more artistically or more practically directed.

I now propose going through a few of what strike not only myself, but many others of my *confrères*, as some of the more crying defects of the modern development of Mediæval art; and, as I bear malice against none, and wish to hurt nobody's feelings, I shall mention the names of no persons and of no buildings. I am aware that the subject is unpleasant, and one which it is rather dangerous to take up; but the Mediæval school has made so much progress, not only in ecclesiastical buildings, but, what is more, in domestic ones, that I feel that it is hardly the time to keep silence, and, in fact, as the rising school, we cannot afford to do so. Again, did I not feel that my views are, to a great extent, shared by others in the profession, I should hardly set them forth in this public manner; but both Mr. Seddon and Mr. Godwin having done so before me, I feel less diffidence, more especially as I hope I shall not be left the last to raise my voice against what appear to me to be crying evils.

And, first, as to what may be called rhythm in building (1). If we look at the façade of any large building of the Middle Ages, we shall find nearly as much regularity as in a Classic building; *i.e.*, the various parts all balance; if they do not, there is always some good reason for it. Thus, the tower of the Palazzo Publico, at Florence, is not in the centre of the building. Doubtless, Arnolfo would have placed it either at the centre or at one end; but then it was wanted to command a certain street; and, accordingly, it was placed to command the said street, and is much out of the centre. Modern buildings look very much as if they had been shaken about in a hat, and that the windows were shoved out just where they were wanted. Now, in a little country town, or in the back of even a large building, this is to a certain degree allowable, and conduces to the picturesque; but it would not do for the front. There the architect must take more pains, and try to bring in his windows so as to balance in the general composition. Of course, this is much more difficult to do than letting them crop out where they may be most convenient; but it can be done with care, and, in fact, it is simply an affair of trouble and ingenuity. Another thing is, to get the building broad and uncut up at the base,—to get the same strings running uninterruptedly through, and to increase the decoration towards the top, and to cut up the sky-line, as recommended by Mr. Hope.

There is one great thing to praise in that not very satisfactory building, the New Houses of Parliament, and that is its rhythm. Each part balances the other, and you can see at once that the man who designed it was, at all events, master of the great principles of his art.

2. The next point is the colour. No one is satisfied unless the building presents a most piebald appearance: red bricks, yellow bricks, black bricks, and even tiles, are all pressed into the service. Now it is undeniable that in certain cases in a brick building, a band of differently coloured bricks may do good service as a string or label to unite the various parts; but that is no reason why it should be repeated all over the building. The Italian walls of stone and brick are purely constructive; at least one I saw at Verona was; the stone courses being connected together and forming coffers, which were filled with rough brickwork. Some buildings have courses of tiles, of the most sickly colours if glazed, or if unglazed of washed-out red and buff—the latter a colour very fashionable with decorators, and which it might be hoped Mr. Ruskin had entirely demolished, for he says that it is like nothing in nature. If brick must be used, I would suggest a much more sparing application of colour, although it is impossible to conceive anything more melancholy than a London brick house after it has been erected fifty years, and it becomes a most serious thing to suggest with what material our modern London buildings are to be faced! So corroding, and so black is the smoke, that positively nothing will resist it but polished granite or glazed earthenware. The latter would offer an immense field for art in the shape of tiles of good colour, or of painted majolica; but I question whether such buildings would look well in a side-view, when the glaze would reflect the light.

3. The use of marble is another of our eccentricities. Employed as the shafts of columns, or in large slabs, nothing can be better, but somehow or other, unless as shafts, it seldom looks well in connexion with stone. Thus I venture to dissent from those elaborate works in Caen stone, where marble is introduced in the shape of half-spheres or of inlays. The polished surface of the marble does not harmonise with the coarse and unpolished surface of the stone; and the eye is likewise attracted to the marble, to the neglect of the sculpture or architecture. If marble really be used in conjunction with stone, I would suggest that it be unpolished.

4. Another point is the abuse of tiles. One sees them everywhere, even on walls, and the same thing may be said of incised stone. Nothing can be better than the latter for pavements, as it affords room for any amount of art; but walls should be painted, for that is their legitimate mode of treatment, and putting incised stones into a wall appears to me to be going to double the expense for no particular good. It is true that it is more durable than painting, but then you lose all shading and all colour, except in your outline, and what is painting without shading and outline? As to tiles, even the best of them quickly wear out, and at the present time there are few to be got—if any—that have any claims to art, say like those discovered at Chertsey.

5. But the great delight of the modern architect is in his chamfers: he chamfers everything he can possibly get hold of whether there is any necessity for the process or not. Sometimes he makes very curious mistakes. Thus nothing is more lovely than the curves of a pointed arch

* Mr. Rickman's successor, Mr. J. H. Parker, has worthily continued this part of the work by means of the Oxford Glossary, the enlarged edition of Rickman, and other similar works on English Mediæval architecture.—W. B.

(No. 1). You get the two lines of the chamfer and the surface between in perspective as you move about it: every view you take varies its perspective, but it is always pleasant because the lines are unbroken and run round; but now apply the chamfer in the middle of either side of the arch (No. 2), and stop it, and see how bad and broken the lines at once become as they get into perspective (No. 3). Or, suppose you want to bring a square archivolt on to an octagonal or circular column, and instead of making the transition by means of the bell, or of the abacus, you do so by cutting away the angles of your archivolt, see how very weak you render the whole affair (No. 4). Chamfers are very good things in their way, more especially in woodwork, when you cannot get mouldings; but it is quite possible to have too many of a good thing.

6. Not unconnected with chamfers are the notchings now so frequently seen in new buildings. Notchings in a huge spire may do duty for dogtooth; but that is no reason why they should break out in parts where they are least wanted. Archivolts are notched; the upper edges of the abaci of columns, where a straight line is most imperatively demanded by the eye, are notched; the lower edges of mouldings are notched, till they look like what milliners call inserted work; even our very furniture is notched. One of my friends possesses a table where the lower edge of the top is thus decorated, greatly to the discomfort of his visitors' knuckles. After all this notching, although very cheap, is very barbaric, and I believe is indicated by Mr. Owen Jones as among the very earliest of the attempts of the savage mind for the decoration of his war club.

7. The management and the form of the arch are most important considerations; and every kind of arch in itself is so very beautiful that it would almost appear impossible to make them ugly; but, thanks to modern ingenuity, a great deal has been effected towards that end. I have already spoken about the top-chamfering, but an equally efficient way is to insert a tympanum which does not come down to the springing (No. 5). The eye always requires a line, either real or imaginary, to mark the springing: put this line a little below, and it does not much matter, as in the case of the best French art, where the arch is always slightly stilted to allow for the portion taken off by the projection of the abacus (No. 6); but, on the contrary, draw this line above, and, somehow or other, the sensation is never pleasing. The Pointed segmental arch, although frequently employed in England during the Middle Ages, is seldom pleasing, of whatever altitude it may be. See the entrance to the chapter-house at Westminster, where, however, I strongly suspect some inner moulding has been chiselled off. Sometimes, however, this segmental arch becomes a necessity, as in the groining of the passage in the same building; but in every case it should be a subsidiary affair, and never employed in the principal windows of a façade, as we too often see it; or, indeed, anywhere else where it can be avoided. Another form of arch is really no arch at all, but has the advantage of being inexpressibly ugly (No. 7). It was very rarely employed in the Middle Ages, but still there are examples of it, as well as of everything else that is bad. Of course, it is never used constructively, for it would not stand; but it too often in the present day acts as a containing line to dossels, doors, coupled windows, &c.; in fact, it is considered a cheap and easy way of making a thing look strong. This endeavour to get apparent strength by the employment of straight lines where our ancestors would have used curved, is one of the greatest of the faults in art of the present day, and of all is the most painful to the eye; and I would even venture to say that no man who has ever properly studied the figure would be guilty of such a thing.

8. Some years back Mr. Street, in a very excellent lecture at the Architectural Museum, suggested the greater employment of small columns in the place of ornamental buttresses. The suggestion was most excellent, but unfortunately it has been worked to death, and we even see columns mast-headed on the tops of our highest gables, and figures on the top of them.

9. Before dismissing the stonework, I might mention the abuse of foliage and of strings—the former covering the building or object until it looks like a petrified arbour, and the latter jumping up and down in a most spasmodic manner. But these are hardly the faults of the present generation. The strings now-a-days are generally managed rightly; and if there should be a little money over (an event which very seldom happens to a younger member of the profession) we generally do try to get a little sculpture, instead of spending it on foliage. Some of our modern foliage, however, has taken a very crude and ugly development. Thus, we see truncated leaves (No. 8), and stalks jutting out at right angles, or less than right angles, from each other (No. 9), besides sundry other offences against good taste; the origin of all which will be found in the endeavour to get strength—a very laudable one, but hardly successful when obtained by means of straight lines instead of curved. The effect of some of the foliage in the 1862 Exhibition absolutely resembled that of the time of Louis XIV., instead of the thirteenth century, while one or two of the objects were completely smothered in leaves.

10. But our woodwork is still very faulty, being for the most part a very great deal too cheap and thin. I am not so much of an antiquary as to advise the use of oak instead of deal for our roofs. Oak was the common wood of our ancestors, and deal is the common wood of our own time; and, had the case been reversed, I am quite sure that our forefathers, like sensible men, as they were, would have employed fir. But if we look at the majority of thirteenth and fourteenth century churches, we shall find very few open roofs. On the contrary, the roof is generally of the simplest construction, often with tie-beams, to keep everything together, and boarded to the bellies of the rafters,—sometimes even a flat-boarded ceiling. This afforded space for painting, and provided an air-chamber between the church and the outer rafters. Hence the edifice was cool in summer, and warm in winter. A small window opened into this airplace, and afforded means of ventilation. Now, compare this with a modern church roof. The timbers are of the smallest possible scantlings; the roof is open to the top (No. 7), so that in reality we see the straight-lined arch magnified to its fullest possible extent, and the little window, deprived of all use, twinkles up above, and only serves to throw in light where it is least wanted, and to expose the poverty of the whole affair. In the present day so many people have got to consider an open roof as a *sine qua non* in Mediæval art, that it is very difficult to persuade them to the contrary. An open roof, to look well, requires very large and very intricate timbers, or it is almost certain to look poor. Most of the open roofs of our own country are of a comparatively low pitch, and the space between the principals was frequently boarded and painted, and treated like a ceiling.

The same objection may be made to our church furniture. It is generally very poor and miserable. It is very true that the mouldings in woodwork should be more slender and cut out than in stone; but then they are generally combined in masses, and the whole effect is sharp and solid, as it ought to be. The best pieces of ancient woodwork I know of are the stalls of Amiens cathedral.

There are very many other points I may enlarge upon, more especially those of stained glass and sculpture. A protest should also, I think, be made against the common plan of filling in the whole of the windows of a building with large pieces of plate glass, whereby all scale is lost. Plate glass is a very good thing; but surely the upper parts of a window might be filled with lead or iron patterns, and thus some scale be obtained.

But I think I have said enough upon a rather invidious subject, and such, as I said before, that I should not have touched upon if I were not sure that very many of my *confrères*, both young and old, thought with me.

I have very often said, and, even at the risk of being thought tedious, I must repeat it again, that the great and crying defect of the art-architect of the present day is the want of the knowledge of the human figure; and until that is obtained I am afraid that there will be but little progress. I say art-architect, to distinguish him from the surveyor-architect, who makes a great deal more money and has a great deal less to learn, besides being generally thought a more useful member of the community. In fact, the trials of an art-architect of the present day are nearly as great as those of the alchemist of the Middle Ages. If he has money, ten to one but he will not work at so unprofitable an occupation, where he sees all the work in other hands, and where he may have to labour some twenty years before he gets his share. If he has friends who will back him and get him work, so much the worse for him, for he will have to consume that time in the execution of works, and the writing of letters, when he ought to be improving himself and others. What really is wanted is just sufficient work to keep him agoing, or occasionally a good large competition; for I by no means consider competitions as unmitigated evils. Only there are two questions which should be satisfactorily answered before going in. The first is, What is to be the style? as in the present day we have no less than two, which is one more than any other epoch ever had. Unless this question be answered, it is obvious that it is clearly fifty to one against the competitor. The second question should be, Is a professional man to be appointed judge? It is obvious how important it is to have this answered in the affirmative; for, besides the committee having in all probability no knowledge of architecture, it will generally be found that their bias is towards what is called the local man; and, indeed, they would be less than human if they did not have this bias, remembering that they travel with the said local man, that they dine with him, they meet him at dinner, and they have had or may have local dealings with him, and, therefore, as I said before, they would be less than human not to prefer him.

Having said so much I have only to reiterate my advice to the art-architect to learn all he can of the figure; and while he does this, and while he may be filling up his time with drawing cartoons, never on any account to give up or think of giving up his profession. It is true he may see his way to making more money at the present moment, by drawing cartoons, or designing sculpture, or drawing on stone; but all this while he is an architect. He has been brought up as an architect, and the profession has a right to his services; and if she is unkind and gives him but little at present, it is his duty to persevere and never neglect her; for the time will come when she will have occasion for his services, and if he is not in a position to take advantage of it, his place will be filled by another, and, most probably, a less educated man, to the great loss of the art.

It is for these reasons that I have ventured to say a word in favour of competitions, and if some regulations could be drawn up either by the Association or the Institute, or, still better, by both conjointly, I believe a great deal of good might ensue, and transactions which at the present moment are often but so much gambling, and that with loaded dice, might be rendered excellent means of bringing good men forward, or, at least, of causing them to exercise the knowledge they possess. I now conclude with the words of Mr. Seddon,—"If we would only condescend to be simple and true, and work out with a thorough honesty of intention the requirements we are called upon to fulfil, thinking less of ourselves and of our reputation, and more of our work for its own sake, we should, doubtless, leave to posterity work of which we should have no need to feel ashamed."

INIGO JONES'S WORKS.

York Stairs Water-gate.—This building has been attributed to Inigo Jones for many years. "This gate was erected by the first Duke of Buckingham, when Lord High Admiral of England, ann. 1626, by Inigo Jones," says Campbell, in "Vitruvius Britannicus;" also by Ralph, in his "Critical Review," in 1734; and Batty Langley, in his "Ancient Masonry," 1736, gives, in "plate xxviii., the Tuscan order, by Inigo Jones, at York Stairs," p. 219. It will be remembered that the late Mr. George Bailey sent the *Builder* an extract from a manuscript in Sir John Soane's Museum (vol. xii., p. 252), being the "Account-book of Workes done by Nicholas Stone, sen.," which stated that "The Water-gate att Yorke House, *hee desined and built*," &c. Here we had very circumstantial evidence that Jones was no longer to have the credit of the *design*.

Covent Garden Church.—Above I have copied what Langley says for the one structure, and now follows what he says about the church:—

"Plate xxvi., xxvii.—The Tuscan Order by Mr. Stone, in the Portico of St. Paul's, Covent Garden.—This Order is built in the Portico of the Church aforesaid, whose simple Grandeur excels all other Buildings in this City."—P. 218.

"Plate xliv.—The Intercolumniation of the Portico of St. Paul's, Covent Garden.—This Building, I have already noted, was built by Mr. Stone, and not by Mr. Inigo Jones, as most do

imagine, and indeed as I did myself, when I measured the Columns in the Portico; but happening, soon after my measurement, to be speaking of it to my worthy Friend, Sir James Thornhill, deceased, he did assure me, that Mr. Stone was the Architect of that Building; but whether it was his own Design, or Mr. Jones's, I will not undertake to say." P. 225.

The extracts from Stone's pocket-book, or account-book, given in Walpole, "Anecdotes of Painting," p. 239, of Wornum's edition, will show that Stone did design many works of architecture. But if he designed St. Paul's Church as well, which is *not* recorded in it, what becomes of the often-quoted anecdote given by Walpole on the authority of "Mr. Onslow, the late speaker," that the Earl of Bedford wanting nothing "much better than a barn:" "Well, then," replied Jones, "you shall have the handsomest barn in England"? Sir James Thornhill died in 1734: Langley's book was published in 1736; and the church was begun in 1631, that is one century; but Walpole's work was not published until 1762-71, about forty years after that by Langley; both, therefore, receiving their anecdotes traditionally. Is any document known of an earlier period recording the name of the architect?

Not that it much matters now; for, what with the repairs by the Earl of Burlington, about 1727; those by Thomas Hardwick in 1788; and the rebuilding by him after the fire of 1795, nothing exists of the original work but the general design.

Further conflicting evidence is given by the two chief authorities of the "Antiquities of London." Strype, in his additions to Stow's "Survey of London," 1720, book vi., p. 88, says, "The Builder of this famous Church was that rare Architect Mr. Inigo Jones, one of the greatest Restorers of the ancient Roman Way of Building, and this the first. How magnificent and great doth it present itself to the Beholder! The Portico is magnificent. The Upright, with the View of the Garden and the Piazzas, is done by the curious Mr. Holler. It is the only View, in Imitation of the Italians, we have in or about London; ushered into use by that great Encourager of Arts, the Earl of Arundel. The Ceiling-piece in Prospective is admired by all that see it. It was done by an Inhabitant of the Parish. His name was — Pierce, a Painter."

Seymour, in his "Survey of London," 1735, ii. 672, states, "Although it is generally said that 'Inigo Jones was the Architect of this Church, yet the author above quoted says he is credibly informed it was built by Mr. Stone.' The author quoted is "Hiram" in the *Grub-street Journal*, No. 249, for October 3rd, and No. 256, November 21, 1734, in his communications reviewing "the Critical Review of the Public Buildings, &c., of London," generally attributed to James Ralph. It is, however, necessary to notice that "Hiram" speaks of Langley's work above mentioned; consequently there must be an earlier edition than that of 1736 (I cannot find it in any catalogue), by which "Hiram" may have become acquainted with the suggested alteration of Stone for Jones.

WYATT PAPWORTH.

SANITARY INSPECTION; BETHNAL GREEN.

ACCIDENTALLY looking into the *Bethnal-green Times*, we found, in an account of the proceedings at a monthly meeting of the Vestry, a report from their Sanitary Inspector, which, after a statement of the work done in the quarter, begins thus:—

"The great annoyance felt by many of the ratepayers and gentlemen of this Board to the untruthful and exaggerated statements by a portion of the London press, has much subsided; and since my appointment as your officer there has been but one account of the sanitary state of the parish. That account appeared in a journal of high standing, and one that has done much good in promoting sanitary matters. I refer to the *Builder* of January 30th, which speaks in very fulsome terms of the sanitary staff of police, and cites a house in Church-street, and talks about untrapped brick drains. Now, if the police or their informant knew anything about brick drains or untrapped sinks, they would have known such a statement was incorrect; but to show that your sanitary committee had not been idle, at the time the report appeared, the owners of the house mentioned had been summoned to Worship-street, and had repaired the house thoroughly."

Supposing we had talked "about untrapped brick drains," why should any person who "knew anything about brick drains or untrapped sinks," know this statement to be incorrect? Does this Sanitary Inspector think that brick drains cannot be trapped? Will he venture to assert there are no "untrapped brick drains" in his district?

The truth is, however, we made no such observation. What we said, after mentioning the visitation of typhus fever with which the house had been afflicted, and pointing to what we believe caused it, was this:—"From the untrapped closet passes an imperfect brick drain, which allows the poisonous gases to be distributed throughout the house." The inspector does not attempt to deny the correctness of our assertion as to the evil condition of the place, and the consequent frightful results, and yet he tells something very like a falsehood to try and make his masters believe that we were wrong. Hear his own account of these very premises:—

"On one of my visits, I found three adults and three children in one small room; two beds were on the floor, and food was kept in the cupboard. On the first floor, a room was used as a gilder's workshop, wherein was deposited all the materials for the business. In one corner was a quantity of coke, and about a bushel and a half of cinder-ash under the grate. I found the room full of miasma, chiefly arising from the dirty habits of the workmen, and the practice of putting out the fire with an acid. The tenants did not know that their illness arose from want of proper ventilation, and the food being kept in a room heated by six gas-burners, a coke fire, and where three adults and three children sleep in a room containing only 900 feet of air. When it is remembered that each adult requires 300 feet of space, can it be wondered at that the tenants of such places suffer from typhus fever?"

He either did not know of the condition of the drainage, or he shut his eyes to it in order to assert that the *Builder* was speaking of what it did not understand. This may be the way to keep his place, but it is not the way to do his duty.

THE NATIONAL GALLERY.

IN reply to questions in the House of Commons on Monday, respecting the National Gallery and the Royal Academy, Mr. Cowper said there would be no difficulty in the removal of the Royal Academy to Burlington House. The Academy were in possession of considerable capital, and were prepared to spend a portion of the money in providing a permanent gallery upon the Burlington House site, if there should be an entrance into Piccadilly. The expense of the building suitable to their purpose would be somewhere about 80,000*l*. If they had been permitted to occupy the whole of the building in Trafalgar-square, they would have contributed the 80,000*l*. in any way that might have been thought best,—either by giving it towards the new gallery, or in expending the money in embellishing the façades of the present building in Trafalgar-square. It seemed to be perfectly immaterial to the Royal Academy whether they remained on the site or not. Therefore, as regarded the Royal Academy there was no difficulty; but as regarded the interest of the public there were certain considerations which required a good deal of attention. The building in Trafalgar-square altogether would not be large enough to properly accommodate the whole of the national pictures. The Royal Academy rooms had about 7,000 superficial feet of floor area, but they were not as large as the rooms at South Kensington, which were at the present moment crowdedly occupied with the Vernon, the Jacob Bell, and other collections of pictures. The Turner pictures were placed up to the beginning of the ceiling, and so high that they could scarcely be seen. Annual increase, too, must be considered. It was admitted by all the committees and commissions that it would be necessary to acquire a large part (he thought the whole) of the area to the rear of the National Gallery. The parish of St. Martin's would come to an arrangement about the workhouse. Archbishop Tennyson's schools would also have to be removed; and it might be possible to get another barrack in a central part of the metropolis. The expense of the site could not be estimated at less than 300,000*l*. The building would be more costly than the one proposed at Burlington House, because it would have a greater extent of ornamental front. These, however, were matters which would require great care and full consideration.

ACCIDENT IN PULLING DOWN ROOFS.—A man has been killed, in Upper Eaton-place, Pimlico, in a shocking manner. He was engaged in pulling down the roofs of some houses, when, being in liquor, he deliberately walked across a broken glass skylight, and fell through: his spine was broken by the fall, and he shortly afterwards expired. He ought not to have been allowed to go on the roof at all.

LAMBTON CASTLE.

ABOUT a dozen years since this castle evinced signs of insecurity. The sinking of the strata above the coal-workings, under the building, was found to be the origin of the mischief. The services of Mr. Dobson, architect, having been called into requisition, means were taken to prevent further dilapidations. Iron tie-bars were inserted in various places throughout the erection, and a commencement was made to stow the underlying coal-workings with brick. The stowing of these was an operation lasting between seven and eight years, during which time upwards of 14,000,000 of bricks were used for the purpose. A secure foundation having thus been made, plans for the restoration of the castle were prepared and approved, and about four years ago the works were commenced. A considerable portion of the western end of the building has been taken down, and certain new and important arrangements and improvements have been made in that and other directions. Mr. Dobson, from severe indisposition, only saw part of his plans carried out, and Mr. Sydney Smirke, architect, has been delegated to continue the undertaking. Mr. Leighton is the clerk of works. The plaster work has been executed by Mr. R. Dodds, of Newcastle. The stone carving already done is by Mr. R. Beall, of Newcastle. The carpentry of the roof over the great hall has just been completed and covered in. It has been executed by Messrs. W. & C. Burnup, of Newcastle.

FISH PRESERVING AND HEALTH DESTROYING.

A CORRESPONDENT encloses for our inspection a plan of the backyard of a fishmonger's establishment, within a few seconds' walk of Scotland-yard. From this plan it appears that within an area of 15 feet by 11 feet, there are,—a privy without door; six bushels of rotten cabbage, with a heap of miscellaneous rubbish; soles, mackerel, &c., left on the flags to cool; a paved area used indiscriminately as a urinal; a heap of cinder dirt; vats of stagnant water; a lobster copper, in which the crustaceæ are boiled, and the mop washed when used for cleansing (?) the yard; a basket of boiled and one of live crustaceæ. At one side are two small wiudows, being the sole source of light and ventilation (?) to the back rooms of an adjoining house. The detail needs no comment.

THE SEWAGE EXPERIMENT AT CROYDON.

WE saw the other day several fields covered with twelve to fourteen tons of grass per acre, says a writer in the *Agricultural Gazette*. It stood as high as a walking-stick, and as thick upon the ground as it could grow. Of a dark green colour, and still succulent from end to end of every stalk, with the flower spike barely through, it was then the very best green food that could be given to milch cows. And for this purpose it was being sold. Cow-keepers in the neighbourhood were coming all day long and carrying it away, paying 1s. a rod, or at the rate of 8*l*. per acre for it on the spot. And many tons (from six to thirty) were being sent to London cow-houses; 25s. a ton being charged for it delivered there. The produce had been after the rate of thirteen and fourteen tons per acre. A second cut will be ready there before the middle of this month, a third towards the end of July, and a fourth in September. Perhaps a fifth may be obtained, or the last growth may be grazed upon the land. The particular field to which we are alluding now was sown in the autumn of 1862. It yielded four, and some of it five crops last year—twelve, ten, seven, and five tons per acre respectively; and it looks as well this year as ever it has done. The land is worth barely 30s. per acre naturally. There are some 240 acres thus in grass, for the most part in Italian rye-grass. The enormous productiveness of that plant under favouring circumstances has probably hardly anywhere as yet been fully realised. The land in question, about 300 acres in extent, is let to the Croydon Board of Health, and they have sublet it to their tenant, Mr. Marriage, for a term of nine years, at 5*l*. per acre. It lies about two miles and a half from Croydon. Mr. Marriage receives the whole of the sewage of Croydon for the use of this land; and passing the whole (about one million or more gallons per day) over the surface of the land, he thus removes from it its noxious and

fertilising elements, and converts the filthy turbid ditch-water which comes on to the farm into the clear and limpid stream which leaves it. At the farm, it is made to flow in furrows about 16½ yards apart, from which it is gradually poured out over the intervening lands.

Although legal proceedings were taken some years ago against the Board of Health because of the nuisance they were guilty of when only a small piece of land had been used, none has yet been proved or even charged against Mr. Marriage and his farm. One million or more gallons have to be used and purified every day, so that at short intervals every field is continually throughout the year being flooded.

The large produce, probably 8,000 tons or more of green food, annually disappears as fast as it is grown; and there will no doubt prove to be room enough in the demand of 3,000,000 of people for all the produce which will one day similarly arise out of a proper use of the 20,000,000 cubic feet per diem of sewage water which is about the quantity in the way of the Metropolitan Board of Works.

HOME SUBJECTS IN BRONZE.

AT Messrs. Miller's, in Piccadilly, are to be seen a series of statuettes illustrative of English sports, well executed in bronze, by Messrs. Carlhian & Corbière, from the original models by Mr. Joseph Durham. Five of them, single figures, relate to cricket,—and show the beautiful forms the youthful body takes in the exercise of the game,—and one, a group of two upright figures, to boating. They are all charmingly modelled, and are calculated, especially if reproduced in a cheaper material than bronze, to spread widely the sculptor's name. The idea is a very good one; and we shall be glad, if sufficient public favour be shown, to induce Mr. Durham to carry it out further.

THE PARIS SALON OF MODERN ART, 1864.

THE exhibition in the galleries of the Palace of Industry comprises 3,468 numbers, of which only forty-three numbers are devoted to architectural designs and drawings, constituting a very unimportant display of very mediocre quality. A project of decoration for the Pont des Arts, consisting of ironwork gilt is very showy: it is by M. Boileau, Fils. A design for a parish church, by M. Breton, is common in idea to excess, but proposed to be gaudily covered with colour inside. M. Etex, the sculptor, exhibits one of his usual architectural aberrations, for a proposed church. M. Moreau proposes to add a mountain of ornaments and symbols on the roof of the triumphal arch De l'Etoile, in the Champs Elysées, and sends a design for a similarly encumbered arch on the Place du Trône. M. Mamey gives himself the labour of proposing a monument to commemorate the Congress of Peace, which never took place, and a mausoleum for the victims at Chili by the burning of the church at Santiago. M. Stillière exhibits a design for the tomb of Eugene Delacroix, lately deceased, which has merit. The other drawings are either designs for restorations of decayed edifices, or of ancient châteaux still standing.

HOUNSLOW.

THIS well-known posting town of former days, where usually 1,500 horses were kept, has now dwindled into unusual quiet, and makes but small progress towards increase of population. It is not a parish even in itself, as Heston includes it, of which the church is about a mile to the north, in the small village of Heston. The church is ancient; the nave, perhaps, of the fifteenth century; and the tower of the early part of the sixteenth century. The tower is a good example of its class, and is said to be in excellent condition of solidity. The entrance to the church is by a decaying wooden porch, in the spandrels of which may be traced a rose and a pomegranate. There is another wooden porch on the south side, leading into the nave, apparently of the same period; and perhaps destined, ere long, to disappear. The interior is composed of a nave and two aisles, divided by alternate short thick circular and octagon columns. The roof and the windows are wofully deteriorated by subsequent so-called improvements, and the stone buttresses externally have been cobbled up by the village bricklayer.

Repairs to the nave are unquestionably necessary, and for the purpose a survey has been made by Mr. Bellamy, architect, who gave a first estimate of 1,100*l.*, exclusive of any internal fittings or better arrangement. A second plan has now been brought forward by Mr. Bellamy, to provide 128 new sittings, the estimate of it being 4,100*l.* For this amount a subscription has been opened and urged upon the inhabitants.

We have received a letter commenting on the largeness of this sum, and on the want of publicity in respect of the design: we are not anxious, however, on *ex parte* statement, to assist in throwing any obstacle in the way of well-intended endeavours.

GREAT BLAST, ARDSHEAL GRANITE QUARRIES.

PREPARATIONS have been in progress for some time past for a great blast at the Ardsheal quarries on the banks of Loch Linnhe, Scotland. The height of the quarry face was 42 feet above the level of the quarry floor, and at a point 70 feet back from the face, and 72 feet above the level of the floor. A vertical shaft, about 4 feet square, was sunk from the surface of the mountain to a depth of 45 feet. At the bottom of this shaft a mine or heading was driven at a right angle in a parallel line with the quarry face. This heading was 25 feet in length, and 70 feet from the face of the quarry. At the end of this heading the chamber to contain the gunpowder branched off at a right angle towards the front. The chamber was hewn out of the solid rock somewhat in the form of a balloon.

The gunpowder was carefully let down in bags, each containing 25 lb. weight. In this way two tons of gunpowder were safely deposited; but as this operation had to be effected in darkness, all connexion between the gunpowder and the heading was stopped, so as to permit of light being freely used to enable the miner to complete the important operation of stemming up the mines.

At seven o'clock on Thursday evening, the 9th inst., the patent safety fuses were ignited, and in thirty minutes thereafter the explosion took place, causing the mountain to groan and quiver, and bringing with it upwards of 20,000 tons of excellent granite.

RAILWAY COMPENSATION CASES.

ON the 11th inst., at the Lord Mayor's Court, the compensation case of the Eagle Assurance Company, in New Bridge-street, Blackfriars, against the London, Chatham, and Dover Railway Company, occupied a special jury the entire day, under the presidency of Mr. Commissioner Ker. The claim made exceeded 20,000*l.*, and was supported by several witnesses. Mr. Bovill, Q.C., and Mr. Keane, Q.C., appeared for the Eagle office; and Mr. Lloyd, with whom was Mr. Horace Lloyd, represented the railway company. Several surveyors were called on both sides, and the value put on the property was very conflicting. Both sides admitted that "fabulous" prices were being asked for land in the city of London: none could be had for the Eagle-office, and, as stated by Mr. Bovill, the company had been compelled to go "into lodgings," on Ludgate-hill, until they could procure eligible premises. Mr. Sambrooke, the deputy-chairman of the Eagle, said search had been made for premises, and none could be procured. It was stated that it would cost 10,000*l.* to erect similar premises to those in New Bridge-street, which had lately been pulled down. Mr. Commissioner Ker, in placing the case before the jury, dwelt on the great discrepancy in the evidence of the surveyors called on both sides. Compensation juries had given sums on which articles had been written in the newspapers, and claims had increased and large sums been awarded. A reaction was now setting in, and it was the duty of the jury to give the value of the property and such compensation as was reasonable. If juries were to give all that was demanded, when railways were to be made, and no land was to be obtained, then the claims must be very large. The learned Commissioner went over the several items of compensation, and at nearly six o'clock left the case to the jury to settle the amount. The jury retired, and on their return, in half an hour, assessed the compensation at 15,947*l.*

ST. DAVID'S RAILWAY STATION, EXETER.

THIS station was opened for traffic on Wednesday, the 1st instant. It is of the Doric order of architecture, and has occupied nearly two years in building. The cost, including the making of the new approaches, and the taking down and removal of the old station, which has been in use about twenty years, is estimated at between 50,000*l.* and 60,000*l.* The contract of Mr. John Spiller, of Taunton, for the masonry, carpentery, window glazing, and decorations, amounts to 18,000*l.*, besides "extras." Mr. Kerslake, of Exeter, who supplied the ironwork, receives 9,000*l.* The roof alone contains about 300 tons of iron and 30 tons of glass (supplied by the St. Helen's Company, Liverpool). The 25 wrought-iron principals weigh something like 60 tons. The architect is Mr. Henry Lloyd, Park-street, Bristol (who, it will be remembered, was architect of the New Town Hall, Tiverton).

A view of the extended front is obtained from the footpath leading from St. David's Hill. It is 360 feet in length. The exterior is faced with Westleigh stone, the cornices, parapets, dressings, and arches being of Bath stone. There is an ornamental verandah projecting over the footpath, 12 feet wide, and a portion of the road, which is 45 feet wide, is covered with a similar roofing of glass and iron, to shelter carriages, cabs, &c. The façade, which rises above the offices—all of which are on the Exeter side—is divided into three compartments, having parapets, with vases and scroll-work between each bay.

The walls supporting the roof are 32 feet high. The ridge of the open iron roof is 60 feet high, in which there is a continuous skylight, extending down each side of the ridge about 12 feet, which, together with the side windows and the glass screen ends, afford ample light to every part. There are three platforms: the down platform is 25 feet wide, and has a run of 500 feet. Hydraulic lifts are fitted to each end of the trellis girder-bridge, for the ready transit of luggage.

The booking-offices, waiting-rooms, and refreshment-rooms, are on the down platform.

The whole of the rooms are spacious, lofty, and well furnished. Three ornamental water-basins and a large fish-stand, supplied by the Coalbrookdale Iron Company, are placed in different parts of the largest platform. The whole work has been under the supervision of Mr. Francis Fox, chief engineer of the Bristol and Exeter Railway Company.

NEW THEATRE, LEEDS.

A GOOD theatre in Leeds has long been desired, and arrangements are now being made to supply the want by the reconstruction of what has been known as "the amphitheatre." The level of the pit and stage is to be lowered about 6 feet. The part now used as pit stalls is to be appropriated to the first tier of boxes. The part fronting the stage, and at present the pit promenade, is intended to be the dress circle. On each side there are to be three private or family boxes. To this tier a separate entrance, in King Charles's croft, is be made, opening into a vestibule, through which is entered a spacious corridor running all round, and giving access to the various private boxes and dress circles. Above this there will be a second tier, having private boxes and dress circle similar to those below, and also having a similar corridor. There will be a separate entrance to this into the croft, opening into a vestibule on the same level as the first tier vestibule, not having communication except for extra occasions. From this vestibule ascend two wide staircases, one being to the second dress circle, the other to the second boxes. What is now the picture gallery will be partly thrown into the present dress circle, and the remainder will form part of the corridor. The picture gallery is to be transferred elsewhere. The pit will extend under the boxes and dress circle, giving about double the amount of accommodation to that of the present pit. To this there are to be two entrances from Landslane, averaging about 7 feet wide each. In front of the building an open verandah is to be erected, so that carriage parties may alight without risk of getting wet. The means of exit are nearly doubled. New scenery is being painted. The internal decorations are being prepared by a London artist. The new drop will be that from the Stratford festival, painted by Mr. Telbin.

THE ADVANCE OF THE ART-WORKMAN.

IN the lectures on the Art-Workman's position, delivered by Mr. Beresford Hope at the Architectural Museum, reported in our pages at the time, and to which we have since had occasion to refer, the lecturer took for theme his suggestion to the recent Royal Academy Commission, that there should be a class of Art-Workmen connected with the Royal Academy, and the approval of the suggestion expressed by the Commissioners in their report.

The following portion of Mr. Hope's evidence contains the statements on which the Commissioners founded their opinion, and may interest our readers:—

Mr. Reeve.—Did I rightly understand you to say that you thought there might be another class attached to the Academy, consisting of distinguished workmen engaged in various industrial occupations connected with the arts, whose education perhaps might not entitle them to be members of the Academy, but who might be attached to it in a subordinate class?—I think so decidedly; that is a point upon which I have bestowed a great deal of attention, and it is very worthy of notice that a class of subordinate artists is gradually arising from the class of superior workmen. Men who were mere workmen a few years ago, are getting more and more artistic with the growth of public taste.

Will you tell the Commission what your ideas generally would be as to the mode of carrying that out?—I think we might, as I said, follow the analogy of the Universities in the Academy more than we have done. There might be something like diplomas or degrees given. A degree from the Academy need not necessarily give a man a voice in the affairs of the Academy: it need not give him a vote or even a claim of exhibition, but it would be a recognition of merit. It would, in short, be a *third* order in the institution, lower than either Academician or Associate, and it would have no limit as to numbers. Any man who had exhibited one or two paintings of distinguished merit, or a distinguished carving or other work, should have that diploma or certificate. So should the student who had distinguished himself during his pupilage. There is a class gradually growing up of more importance than perhaps the Commission are aware of, which has not yet been sufficiently recognised: I mean the sculptors in stone and not in marble. They have hitherto chiefly played their part in ecclesiastical architecture, but I hope and believe they will be increasingly employed in all kinds of buildings. Every day that class is growing of more and more importance. Hitherto that sort of work has been undertaken by *entrepreneurs* who may be artistic men, and they generally are so, but they undertake not only wood carving but stone carving, foliage, and effigies, all of which pass under their names: generally speaking they began themselves with being working artists, but as they got richer, became gradually employers, not workers. I want those *entrepreneurs* to make no concealment in their employment of subordinate working artists, and for the world to have the names of the men so employed, so that you should know that the wood carving in a particular building was done by Smith, and the figure-carving by Thompson, and so on. In cases where the employer still worked with his own hand, he should have the credit of it. The evil of the present system is, that the workers knowing that they will not get the credit of their work, are apt to be content with a conventional level of smooth mediocrity. Besides, they attempt everything. I could wish the figure carver to stick to figures, and the foliage carver to foliage, and each try to be great in his own line.

You would endeavour to bring these workmen under the influence of the Academy?—I should.

Lord Elcho.—You would honour handicraftsmen?—Yes.

Mr. Reeve.—Would you put them into a separate class? would you have a degree of handicraftsmen, or a class of handicraftsmen attached to the Academy?—That is a delicate matter: the thing must be done so as not to wound their *amour propre*.

You have not thought of any particular mode in which they should be attached to the Academy?—Only by certificate, as far as the general body went. Out of the selected few it might have a class of associates including painters, water-colour painters, sculptors, engravers, photographers, stone-carvers, wood-carvers, glass-painters, potters, metal-chasers, and enamellers.

Mr. H. Seymour.—Have you anything of that sort attached to the Institute of Architects?—No; but the institution called "The Architectural Museum," of which I am president, is for that special purpose.

Have you any certificates of merit for handicraftsmen?—We give prizes and certificates in our Architectural Museum. We are a purely voluntary institution: we have very limited funds; but, what funds we have, we spend partly in collecting this museum of architectural casts, and partly in giving prizes with certificates of merit. We also give lectures, which cost us very little, partly given by amateurs and partly by professionals. Mr. Gilbert Scott, who is both R.A. and a leading member of the Institute of Architects, is our treasurer, and was the founder of our society.

In the Institute of Architects do you give certificates of merit to handicraftsmen?—No; handicraftsmen are not at all recognised there; it is the Institute of Architects, strictly so called, and was founded to meet their artistic and business requirements.

You would think, then, that the Institute of Architects is on too narrow a basis as well as the Royal Academy?—Yes, I think so.

How is it that the Institute of Architects is separate from the Architectural Museum?—There are always three societies to do the work of one in England. The Institute of Architects was founded twenty-five years ago; and several people, about twelve years ago, seeing that it did not embrace handicraftsmen, set up the Architectural Museum to supply that deficiency. The Architectural Museum, though it has no obligatory *credo*, is mainly Gothic. It does not exclude other styles, but it has a strong Gothic bias. It is governed by a mixed council of professional and amateur members. I may add that, not to mention many distinguished living architects who belong to it, the Prince Consort was our patron, and the late Lord De Grey our first president, and that the list includes the names of Sir Charles Barry and Mr. Ruskin. The Institute of Architects has no *credo* at all.

The object of the formation of the Architectural Museum was to encourage the class of handicraftsmen who have found great employment lately in consequence of the development of Gothic architecture?—Quite so.

Lord Elcho.—Supposing that the Royal Academy were reconstituted, and were to consist, as it does at present, of Associates as well as Royal Academicians, what name do you think you could advantageously give to those handicraftsmen whom you wish to honour by attaching them in some way to the Academy?—I recently gave an inaugural lecture at the Architectural Museum in which I discussed our present position, and in which I suggested that they should be called working artists, not art workmen.

Sir E. Head.—If I apprehend your object rightly, it is that the Royal Academy should take hold of the element of art which exists in those handicraftsmen, and by taking notice of that, and stamping it with approbation, they should encourage the growth of that element in the other handicraftsmen?—Precisely.

Mr. H. Seymour.—Did you take your idea with regard to the encouragement of handicraftsmen from any institution of the Middle Ages?—Not directly; the idea was floating in people's minds, I dare say.

THE BUILDING TRADES MOVEMENT.

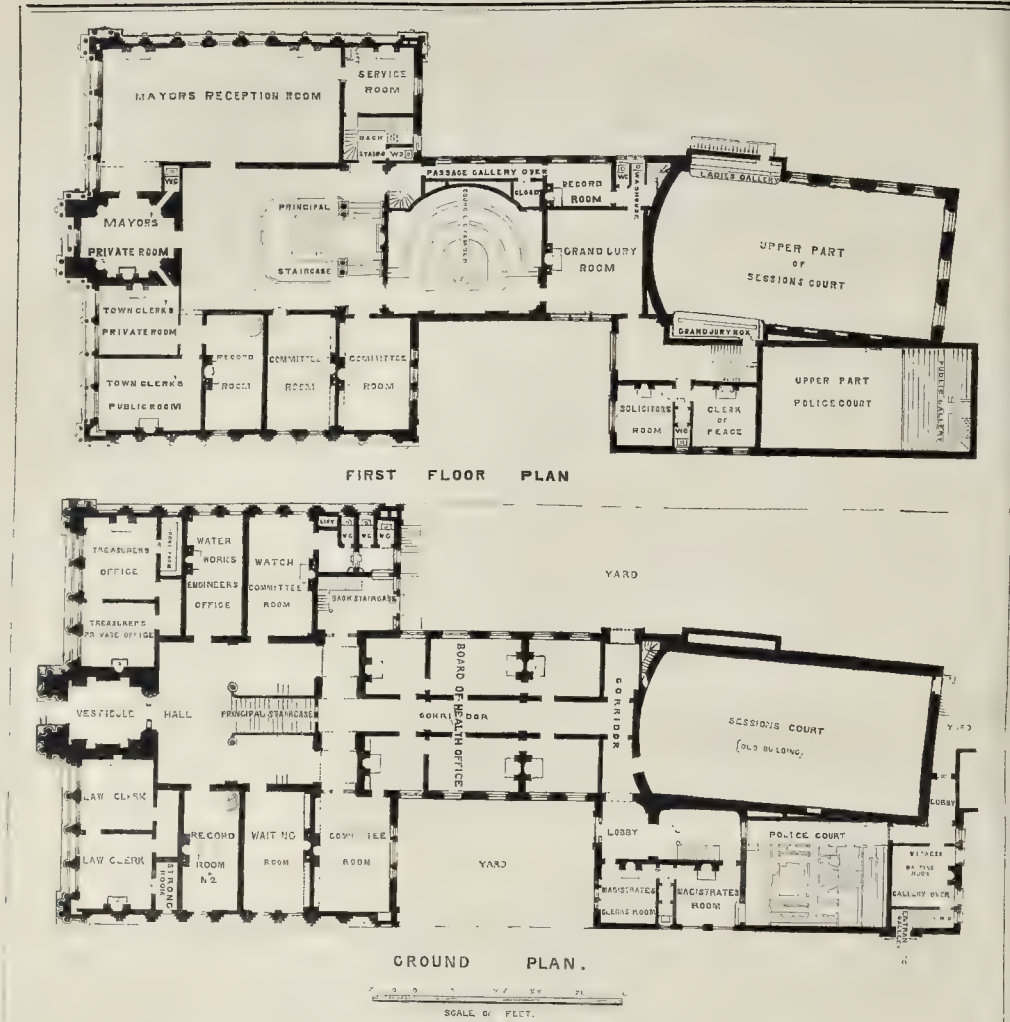
Newcastle-upon-Tyne.—The master house carpenters and joiners here and at Gateshead have formed an association for their mutual protection.

Birmingham.—The masons, on resuming work, submitted a code of rules to their employers for approval and signature. Four firms signed the rules, and their men resumed work, but the remainder of the firms engaged in the building trade refused to sign the code, and the consequence was that the men in their employ struck work; so that, though the movement was virtually at an end, the trade here is not yet in a settled state.

Leicester.—The strike here may now be said to have terminated. The bricklayers' labourers resumed work, accepting the promise of their masters to give an advance of 3d. per day, in July. The master painters granted their men the 3d. a day which they sought for. The bricklayers sent in an application for 4d. per day, and have been told that it would be given them. The carpenters and joiners notified their intention of striking for 3d. per day, should it not be granted to them on the first Saturday in July. The masters have intimated their intention to grant the increase, as in the face of such a demand as there is for houses in Leicester it is useless to hold out.

St. Helen's.—The plumbers and painters of St. Helen's, in accordance with a notice recently given to the masters by them threatening to strike if certain demands were not complied with, struck work, the masters having refused to give them the required advance of two shillings per week. The painting and plumbing business at St. Helen's is not at present very brisk.

Burslem.—The bricklayers in this district, with their labourers, have been on strike for several weeks, for an advance of 6d. a day. The builders, with deputations from the two bodies, met in friendly conference, with a view to the adjustment of their differences. In course of the discussion, the builders complained that the advance should have been asked on a week's notice, and explained the great loss they should be subjected to in various instances upon the contracts previously entered into (some of them very heavy) upon the then existing scale of labour. Ultimately an offer was made to advance 4d. per day to the bricklayers, and 3d. per day to the labourers,—making the wages of the former 26s. per week, and of the latter, 16s. 6d.



Swansea.—The great body of working masons usually employed by the principal builders of Swansea, struck work recently for an advance of wages. The wages had been 22s. per week, but the men demanded 24s. per week, or 4s. per day. The masters naturally complained that this extreme course was adopted by the men without any notice whatever, and that as large contracts had been taken, based upon the rate of wages hitherto given, it would be almost ruinous to them if they complied with the peremptory demands of the men. Such arguments as these, however, seemed to have no weight with the men. The masters at length felt compelled to comply with the demands of the men, who returned to work at the increased rate of wages. The plumbers, however, afterwards struck, demanding 3s. per week extra wages. Some of the employers offered to give the increased wages, but the men refused to work until the whole body of masters complied with the demand made.

ARCHITECTURAL SOCIETY OF NORTHAMPTON.

THE annual summer meeting of the members of this society was held on Tuesday and Wednesday in last week, at Wellingborough. The meeting was a successful one, the district being interesting and the weather favourable. The proceedings commenced with a meeting in the Town-hall, when there was a large attendance; and the Rev. J. G. Orger, of Cranford, read a paper "On Wellingborough and its Antiquities." The chair was taken by the Rev. Lord Alwyne Compton. Mr. Law, of Northampton, presented some architectural photographs of buildings in Northampton. The chairman afterwards explained a few of the articles in the museum, and the meeting then adjourned to Wellingborough Church, which was briefly examined with reference to Mr. Orger's paper. An excursion was then made to various other churches,—namely, to those of Wilby, Earl's Barton, and Mear's Ashby. Dinner was partaken of at the Hind Hotel; after which there was an evening meeting, with a large attendance, and the Rev. A. Pownall read an account of a remarkable Anglo-Saxon penny, found at Bulwick, in Northants; and the Rev. A. Poole a paper "On Painted Glass in connexion with Architecture." The chairman delivered a short lecture "On Church Tiles," which concluded the evening's proceedings. On Wednesday, another excursion took place, to Great Harrowden and Burton Lattimer Churches; at the latter of which a paper on the edifice was read by the vicar, the Rev. T. Bartlett. The museum, which was held at the Wellingborough Town-hall, was opened to the public on Wednesday, and was visited by many persons.

NEW PULPIT FOR BUCKINGHAM PALACE.—The new pulpit for the private chapel in Buckingham Palace, which has been made by Messrs. Burke & Co., of Regent-street, was designed by Mr. Pennethorne. The material is alabaster. It is delicately moulded, and the panels bear the sacramental cup and other emblems.

a

HULL TOWN HALL.

HULL TOWN HALL.

IT having been decided at a council meeting held on January 17th, 1861, that a new town-hall should be erected on the site of the old mansion-house, situate on the west side of Lowgate, a committee was formed, who at once advertised for designs for a building that would occupy the whole of the ground between Leaden-hall and Hanover squares, the premiums being 100*l.* for the first and 50*l.* for the second best designs. Having received forty sets of designs, the committee selected two of them for the premiums, but the town council appears not to have approved of their selection: ultimately the matter was referred to Mr. Tite, M.P., who decided that the design with the motto "Con Amore" by Mr. Cuthbert Brodrick, was the most suitable, and entitled to the first premium. The second premium was awarded to Messrs. Lockwood & Mawson.

Preparations were made for commencing the work, and on excavating the ground it was found to be of such a nature that the portion under the tower was obliged to be piled to the depth of 40 feet, and the whole surface of the main building concreted 2 feet deep; and it was not until October 16th, 1862, that the foundation stone was laid by the mayor, with the customary honours, since which time the works have progressed as fast as possible, and we believe that the entire building will be ready for occupation next spring. The police court is now in use, and the main building is being roofed in.

The building is in the Italian style, having a frontage next Lowgate of 105 feet, and a depth of 220 feet. The front portion, which is entirely for corporation purposes, is faced with Steetly and Portland stone, having a Bradford stone plinth, with Red Mansfield shafts to the columns and pilasters. The whole of the windows have French casement sashes glazed with Bristol plate glass. The tower, which will contain a clock with four illuminated faces, 7 feet 9 inches in diameter, and a bell to sound the hours, of 2 tons weight, is about 135 feet high from the ground line. The board of health, police court, and sessions court buildings, in the rear, are faced with Walkingham white stock bricks, with Steetly stone dressings and Bradford plinth.

The building contains the following rooms and offices:—

Basement: kitchen, 28 feet by 31 feet; scullery, 18 feet 6 inches by 18 feet 6 inches; larder, 18 feet 6 inches by 16 feet; servants' hall, 28 feet by 17 feet; record-room (fireproof), 28 feet by 13 feet 6 inches; two wine-cellars, 11 feet 6 inches by 12 feet each; beer-cellar, 11 feet by 11 feet 6 inches; pantry, 11 feet by 11 feet 6 inches; boiler-house, 15 feet by 16 feet; three spare rooms, 18 feet 6 inches by 17 feet 6 inches each; back staircase, passages, cellars, &c.

The ground-floor, which is 6 feet 6 inches above the level of the street, contains;—Vestibule, 16 feet 6 inches by 20 feet; hall and staircase, 48 feet by 34 feet; law-clerks' public office, 19 feet by 17 feet; private ditto, 19 feet by 18 feet, with strong-room adjoining; treasurer's office, 19 feet by 17 feet; private ditto, 19 feet by 17 feet, with strong-room adjoining; record-office (fire-proof), 28 feet 6 inches by 13 feet 6 inches; waiting-room, 28 feet 6 inches by 16 feet 9 inches; committee-room, 28 feet 6 inches by 16 feet; watch committee-room, 28 feet 6 inches by 17 feet; engineer's office, 28 feet 6 inches by 14 feet; W.Cs., and back staircase.

For the board of health there are, surveyor's offices, three rooms, average 15 feet 8 inches by 13 feet 6 inches; collectors' offices, three rooms, average 15 feet 8 inches by 13 feet 6 inches; corridor and staircase; police-court, 50 feet by 26 feet; magistrates' room, 15 feet by 15 feet 6 inches; magistrates' clerk's room, 15 feet by 13 feet 6 inches; with W.C. and lavatory adjoining; witnesses' waiting-room, with W.C. adjoining, 15 feet by 15 feet; sessions court, 67 feet by 34 feet, with cells beneath

HULL TOWN HALL.—MR. CUTHBERT BRODRICK, ARCHITECT.

sessions and police court, communicating with each dock.

First floor: mayor's reception-room, 57 feet by 28 feet, with a recess 15 feet by 7 feet 4 inches; mayor's private room, 18 feet 4 inches by 22 feet 6 inches, with W.C. adjoining; town clerk's office, 18 feet by 24 feet 6 inches; private ditto, 18 feet 9 inches by 17 feet; record-room (fire-proof), 28 feet 6 inches by 13 feet 6 inches, with geometrical iron staircase to ground and basement floors; committee-room, 28 feet 6 inches by 16 feet 9 inches; ditto, 27 feet by 16 feet; service-room, adjoining mayor's reception-room, 16 feet by 14 feet, with lift from kitchen; back staircase, with W.C., &c.; council-chamber, 36 feet 6 inches by 36 feet 6 inches, fitted up with wainscot desks and chairs, and 28 feet high, with 16 pilasters on sides, and circular enriched ceiling, with dome light 16 feet diameter in the centre; grand jury room, 26 feet by 22 feet 9 inches; recorder's private room, 15 feet 6 inches by 10 feet, with W.C., lavatory, and private staircase to bench of sessions court; clerk of peace's office, 15 feet by 13 feet 6 inches; ditto, private, 15 feet by 15 feet 6 inches, with W.C. adjoining.

The second-floor will contain mayor's bed and dressing rooms, housekeeper's rooms, and several spare rooms.

The contract for the whole of the work was taken by the late Mr. Samuel Addy, of Leeds, for the sum of 20,200*l.*; the sub-contractors being Messrs. Hutchinson & Son, carpenters and joiners; Messrs. Dawler & Son, slaters; Mr. Wardall, painter, of Hull; and Messrs. Nelson, smiths and founders; Messrs. Webster, plumbers and glaziers; and Mr. Mountain, plasterer, of Leeds. Mr. C. Pulman is the clerk of works.

CONTINENTAL BUILDING AND ART NEWS.

Vienna.—A number of sketches for the decoration of the "votive" church now in course of construction, have just been submitted to the inspection of his eminence the Cardinal Archbishop von Rauscher. These sketches consist of designs for about sixty statues of saints, besides four large groups, of which the largest is proposed to be erected over the chief entrance. As soon as the various designs have received the sanction of his eminence it is intended to have them executed by public tender. In the mean time, the works on the church itself are steadily progressing, although a million and a half of florins (about 125,000*l.*) are still wanting in order to complete the building in its integrity. It is hoped that this sum will gradually be raised by voluntary subscriptions. Besides this church, Vienna is to have another smaller church, in the quarter known as "Unter den Weissgerbern." Archbishop von Rauscher has declared himself ready to contribute 60,000 florins (5,000*l.*) on condition that the designs furnished by Mr. Friedrich Schmidt, architect to the cathedral of St. Stephen's, be carried out. The church is to hold 3,000 persons, and will have a nave and two side aisles: the style is Gothic, the materials to be brick and stone, and the cost is estimated at 400,000 florins, being about 11*l.* 10*s.* a sitting.

Munich.—A company has been formed here for the purpose of building a new theatre, to be called the "Volkstheater," or Theatre for the People, and a committee has been formed to consider the details of the plans. Two members of this committee are Mr. F. Bodenstedt and Prof. Ludwig Lange, architect of the museum at Leipzig. The latter will probably be commissioned to carry out the building, which will cost about 60,000 florins.——Prof. Halbig has just completed two statues, one for America, the other for the town of Kehlheim. The former is a nymph, in Carrara marble; and the attitude, especially the treatment of the flowing hair, is much praised. The other is a statue of King Ludwig in regal robes, with the plan of the Hall of Liberty in his right hand.——Schnorr von Carolsfeld is engaged with the completion of his cartoons of the Nibelungen Lied, and but three remain to be finished.——The old Abbey Church of Gladbach, in the Palatinate (Rhenish Bavaria) is being restored. The chancel, in early Gothic style, has been thoroughly repaired, and the ancient painted glass reinstated in its original state. The rest of the abbey is of late Byzantine period, and the porch, which has now been cleared and restored, is one of the finest examples on the Rhine. Any of our readers intending to visit the fine cathedrals of Worms and Spires this autumn, should not omit to "do" Gladbach *en passant*.

Berlin.—A Gothic fountain is being erected in the gardens of the Castle of Babelsberg, the summer residence of the Crown Prince and Princess of Prussia, near Potsdam. This fountain was presented to his Majesty when at Cologne on the 10th of May, and was executed by the masons engaged on the Dom, in memory of the completion of a certain part of the cathedral on the 15th of October, 1863. It is composed of the various sorts of stone employed in the works of the Dom, the principal feature being a column, having a statue of Gerhard van Ryle on the top, surrounded by allegorical figures holding shields charged with arms and emblems of the arts. An inscription at the back has the words:—"*Regi augustissimo protectori potentissimo, lapicidæ summi templi coloniensis hunc fontem ex saxo sculptum.* 1 *Oct.*, 1863."

Prague.—A fine old doorway has just been discovered in making some alterations at the works of Messrs. Kas, of this city. The premises were until lately those of an old church of St. Lazarus. The tympanum of this doorway is peculiarly interesting, containing in high relief a group representing the Saviour blessing Lazarus, who has just been recalled to life. Mary, the sister of Lazarus, stands at his side. The lower part of the tympanum is ornamented with foliage and figures of animals, and the details of the architraves are very peculiar. This doorway is the first originally Byzantine one as yet discovered in this city, and as such the discovery is interesting.

Kiel.—Last year, the authorities of the university in this town issued instructions to competing architects for a new university building, but it was not till lately that they awarded the prizes to the two successful competitors. They manage these things very slowly sometimes in England; but the wise men of Kiel University seem to have carried off the palm in this respect. Possibly, however, the Schleswig-Holstein War may have had something to do with the delay. All the designs, with two exceptions, were Gothic, and these two exceptions carried off the prizes, although the committee do not recommend that either design be carried out. The first premium was awarded to Mr. Karl Remé, of Hamburg; the second to Mr. Augustus Hahnemann, of Berlin.

Baden.—The bridge across the Rhine, at Constance, Grand Duchy of Baden, has lately received four statues executed by local artists. They are 9 feet high, of a reddish yellow sandstone, and represent a grand duke, a duke, and two bishops.

Paris.—A correspondent informs us of an idea seriously entertained, involving a total alteration of the southern galleries of the Tuileries. It is proposed to take down the whole of that façade, and to continue the Renaissance style peculiar to the Galerie Henri II., from the Louvre to the Pavillon de Flore. The cost of this alteration is estimated at 7½ millions of francs.——From a report of the director-general of the Imperial Museums in France, Mons. Nieuwerkerke, it appears that Paris can boast of thirteen museums, besides those of Versailles and the Luxembourg. They are devoted to ancient and modern sculpture; objects of art of the Middle Ages and the Renaissance; paintings, drawings, and engravings; as also to Egyptian, American, Celtic, Gallic, and Roman antiquities, and to navigation.

Residences of Noted Men.—The astronomer Olbers, and Heeren, the historian, were both born at the little village of Arbergen, near Bremen. The King of Hanover has just caused marble tablets, bearing suitable inscriptions, to be affixed to the outside of the houses. This is a custom which we should do well to imitate, as we have often urged. It is interesting to the general public to know where our great men were born or died, and even a rustic will point with pride to a tablet "down in the village."

GARSTON AND LIVERPOOL RAILWAY.

THE new line of railway from near Brunswick Dock, in Liverpool, to Garston, was opened for public traffic, as we before noted, on the 1st of this month. The line is only four miles in length, but in connecting the first port of the kingdom with an existing system of railways, it is of some considerable importance. By its means the Great Northern and Manchester, Sheffield, and Lincoln railways have access to Liverpool; and though the present terminus is chiefly for goods, there is a temporary passenger accommodation, the intention being to extend the line to the centre of the town by a Bill now before Parliament.

The works on the line are costly, through their multiplicity, there being no less than twenty-four bridges and four tunnels, one of which is 1,200 yards in length, through the red sandstone rock.

The warehouses at the station are lofty, and covered with iron roofing. There are nineteen cranes and eight hoists to an upper floor, for the working of the goods traffic: these are propelled by a pair of engines (forty horses): the power is conveyed by shafting through tunnels, under the station, which are well lighted with gas: some of the cranes are suspended from the ceiling of the warehouse floor, and therefore occupy no space for the jib. The three stations on the line are built by Messrs. Holme & Nichols, and each being above the line, offers accommodation for either platform by a footbridge with only one descent. Two bridges at West Dingle and Otterspool pass the railway over those charming valleys, and where the line is in cutting, the gardens of several properties have been reproduced on the top of the short tunnels constructed there.

The contractor for the line was Mr. James Holme, and for the terminal station, Mr. George Thomson. The ironwork was supplied by Messrs. Mabon, of Manchester; and the whole work has been superintended by Mr. James Bower, the resident engineer.

"JERUSALEM EXPLORED."

OXFORD ARCHITECTURAL SOCIETY.

ON Monday afternoon, during the Commemoration, the annual meeting of the Oxford Architectural and Historical Society was held in the lecture-room of the New Museum, when the Rev. George Williams, author of "The Holy City," delivered an address on the charges recently made against Signor Pierotti with reference to certain plans and drawing in his newly-published work "Jerusalem Explored," of which our readers have heard. Professor Goldwin Smith, the president of the society, occupied the chair, and, in opening the proceeding, remarked that the society having been the first in this country before whom Signor Pierotti propounded his discoveries, it was only right that they should hear him defended from the charges which had been brought against him. Mr. Williams then proceeded with his address, in which he entered very minutely into the question. He said, charges of plagiarism and inaccuracy had been laid against the author by Messrs. Fergusson, Grove, and Tipping, and long and acrimonious letters *pro* and *con* had appeared in the journals. Mr. Williams, while admitting one or two instances of fault in the author, contended for his candour and credibility in the main, and produced a number of the signor's original sketches and plans as evidence in refutation. Discussion being invited at the close of the address, the Rev. R. St. John Tyrrwhitt remarked, that all who were interested in the topography of the Holy City, or who had studied Pierotti's work, must have been highly gratified at the information which Mr. Williams had afforded them, and he mentioned that with respect to one detail with which he was acquainted—a monolith in the harem—he thought there was a strong probability, putting aside the positive evidence on the point, of Pierotti having made an original sketch, and a very good one.—The Rev. H. Estridge thought they might now confidently acquit Pierotti of any intentional deceit, as apparently the worst that could be laid to his charge was indiscretion or thoughtlessness.—The president remarked, it was really a case, if the parties thought their characters compromised, for judicial investigation, which might operate with success. It was much to be regretted that there was not some literary tribunal to which questions of this kind, particularly when they involved personal imputations, could be submitted for judicial investigation and decision. The satisfactory course in the present case would be to refer it to a competent tribunal, consisting both of literary men and of those qualified for a judicial investigation, and the points at issue could be easily decided. All that could at present be said was, that the charges had been stated and met by Mr. Williams, and so far as he could judge, excepting the case of indolence or indiscretion in making use of another person's drawings instead of his own, and the allowing his name to be placed to copies of photographs not executed by himself, a substantial answer had been given to the charges.

A PHOTO-ELECTROGRAPH.

PHOTO-ELECTROGRAPHS, OR ETCHINGS ON GLASS.

SOME of our readers will probably stare to find this burlesque sketch in our prosaic pages, but we assure them it is by no means intended as a joke. This impression, not unlike in one respect an Albert Durer engraving on pear-tree, is a successful specimen of a new process of obtaining engravings assisted by photography. There have been many similar attempts, and it will have to be seen in what the present excels. This engraving has been drawn by Mr. R. Townroe, and presented by him to the Female School of Art, to serve as a frontispiece to a burlesque* to be performed next week in the Horticultural Gardens, for the benefit of the building fund of the school. The process is as follows:—1st. A drawing is made by a stile on a glass covered with collodion specially prepared. 2nd. This drawing is printed photographically upon a prepared surface, which admits of a reproduction of the drawing in relief. 3rd. An electrotype cast is made from this reproduction, which serves as a woodcut.

The advantages claimed are, the getting the artist's own work without the intervention of the engraver: and that the cast is made more rapidly than the woodcut, and generally at less cost.

* "Mumbo Jumbo; or, The Mountains of the Moon near the Gaboon! A Nonsensical made Sensical through Notes written by me, William Shakspere, in my Tercentenarce; to be performed for ye beneficial of ye Female School of Art. London: imprinted by Misters Strangeways & Walden for all Booksellers." We take the opportunity to invite assistance to the Female School of Art.

PROVINCIAL NEWS.

Beccles.—A special meeting of the town council was lately held, when the committee appointed to provide additional public rooms presented their report. It appeared that the committee had under their consideration plans which embrace, 1st, A larger room for the public library, leaving the present library as a general reading and news room; 2nd. The appropriation of the apartment under the present library, &c., to the more especial benefit of the working classes; 3rd. The improvement of the gallery now occupied by the Working Men's Institution, adapting it for the purposes of various meetings; 4th. The converting the basement of the assembly-rooms into a kitchen; 5th. The opening an additional entrance from Newgate-street. The consideration of the subject was deferred.

Rochester.—The whole of the booms, piles, and other obstructions which have for several years past impeded the navigation of the river, consequent on the removal of the foundations and other submarine portions of old Rochester Bridge, have at length disappeared, the last of the piles having been recently cleared away. The railway company have fixed additional lights on their bridge crossing the river, to assist the barges "shooting" the bridge after dark.

Eastbourne.—The Workmen's Hall, erected here at the sole expense of Mr. W. Leaf, and presented by him to the town, has been formally opened. The building occupies a corner plot of ground in the Seaside-road, about midway between the Anchor Hotel and Ordnance-yard, presented by the Duke of Devonshire; and has a frontage of 42 feet by a depth of 150 feet. The style of the architecture is Continental Gothic, and the edifice is built of red, white, and black brick, with Bath stone windows, doors, &c. The design includes a tower, which occupies the south-east angle of the building, and through which is the principal entrance. The building affords the following accommodation, viz.,—public coffee-room, library and reading-room, serving-bar, smoking-room, kitchen and hot closet, and means of cooking for about 200 people, when required; large lecture-hall, capable of accommodating 300 persons, with gallery opening into it for orchestra; retiring-room for lecturer, and private staircase. This hall is lighted by windows at either end, and skylights in the open timber roof. The premises also afford a yard for skittle-alley, place for smoking out of doors, lavatories, &c. The architect was Mr. R. K. Blessley, of Eastbourne and London; the builder, Mr. W. H. Standing, of Eastbourne.

Portsmouth.—The report read at the annual meeting of the floating bridge company shows that, after setting aside a sufficient sum to pay their usual dividend of 6 per cent., the directors had been enabled, out of the earnings of the past year, to appropriate 1,000*l.* in reduction of their capital account. The new bridge is expected in a few weeks.

Guernsey.—The works at St. Peter Port Harbour are progressing. One of the new landing stages (the White Rock), is about being completed. When the other landing-stages shall have been erected, steam-boats will be able to land passengers at all tides. There will be four landing-stages. Signals will be hoisted in order to direct the masters of the packets to the proper ones according to the state of the tides.

Neath.—Improvements, keeping pace with the rapid strides of the population, are now going on. The Welsh Independents are about building a new chapel upon the site of the present building. Other chapels are in contemplation. Ground has been secured in the London-road for a new Wesleyan Chapel, and the English Baptists are about procuring a new building; while the new church has met with liberal subscriptions. Many houses are being built at the south side of the town.

Durham.—Messrs. Backhouse & Co., bankers, have purchased the property in the Market-place, Durham, known as the City Tavern. The property adjoins the Market-place Bank. It was purchased by auction for 1,910*l.* Workmen are demolishing Bailes-corner.

Hatherleigh.—A new set of chimes for the church clock are now being fixed in the tower, and will probably be set going by the end of this week. They are constructed to chime six changes and to play every three hours, viz., three, six, nine, twelve, for the space of three minutes. The new clock, which was fixed in the tower about three months ago, was made by Mr. Joseph Fairer, St. George-street East, London, who is now superintending the fixing of the chimes.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION.

AT the meeting, June 8th, Mr. T. J. Pettigrew, F.R.S., in the chair, Lord Boston exhibited some Stuart memorials, which had long been preserved in his lordship's family. He also exhibited an oval miniature of James Duke of Berwick, of fine execution. It is painted in water-colours, on the back of a card (the seven of diamonds).

Mr. Kell transmitted some further remarks on the site of ancient Southampton, and specially referred to a coin of Offa, the moneyer being the Archbishop JEANBRECHT, known for its great rarity. Mr. Bergue stated that there was one in the Hunterian Museum, at Glasgow, and two others (not precisely alike) in Captain Murchison's collection. Sometimes the O is represented circular, at others of a diamond shape.

Mr. Cecil Brent exhibited further leaden objects from the site of the Steel-yard,—a part of a sheath, a demi-figure of the Virgin, and the *appliqué* ornament of a relic frame, round the circular opening of which is *Ave Maria Gratia Plena*, each word being divided by an acorn. This belongs to the fourteenth century.

Mr. Taylor exhibited a fine flint spear blade, found at Norton, near Daventry. Mr. S. Wayland Kershaw sent notes in regard to a tomb in St. Patrick's Cathedral, Dublin. It has been discovered during the restorations now in progress, and being beneath the stonework of the high altar, and belonging to the first half of the thirteenth century, may probably be that of John Comyn, the first English Archbishop of Dublin, who erected the cathedral in 1191. Mr. Kershaw also exhibited four ancient deeds of the reigns of Edwards I., II., III. They related to grants of land.

Mr. Clarence Hopper read a paper "On watches and clocks," referring particularly to their introduction into England, in the reign of Henry VIII., though not generally used until the reign of Elizabeth. Mr. Hopper read extracts from various wills bequeathing watches, one of which was by Archbishop Parker to Richard, Bishop of Ely. The paper comprised also an inventory, taken from an authentic record of the watches and clocks in the possession of Queen Elizabeth. The paper will be printed.

The Rev. J. H. Pollexfen exhibited the results of a late digging at Colchester, in which was a large urn, containing a small terra-cotta one, and inclosed within were some small glass lachrymatories, and twisted rods of spirals, of blue and white glass; a perfect mirror, with a perforated margin; small bronze keys, pins, &c. Mr. Pollexfen also described a rare medallion, of glass, such as the Romans used as decorations to costly vessels, the idea of which was long retained by the Venetian craftsmen of the Middle Ages. Numerous other exhibitions were made.

The remainder of the evening was occupied in a statement made by Mr. E. Roberts regarding Mediæval discoveries at Guildhall while pulling down the upper portion for the purpose of restoring the roof. These consist of the doorways, and part of the walls of turrets, of Reigate firestone; the various building-stones which had been used by Sir Christopher Wren, on adding to the walls after the Great Fire. Among these were several arch stones, leading Mr. Charles Baily erroneously, he said, to think the hall had originally stone ribs from pillar to pillar; but Mr. Roberts had carefully examined the materials, and found that they belonged to a vaulted building. After pulling down a considerable portion of the gables, part of the original wall was uncovered, and a small portion of the coping. Portions of melted lead had run into the walls at the Fire of London. A plain gargoyle was found in the north wall. Windows had been opened, and showed a good Early Perpendicular two-light window, which had been carefully concealed, inside and without, by Roman cement, a century since. Mr. Roberts referred to the drawing of the ancient roof, as given by Smith, showing how erroneous it was in principle. The report of Mr. Roberts and Mr. Digby Wyatt to the corporation on this subject was laid on the table, but Mr. Roberts disowned any hand in the sketch bearing Mr. Wyatt's initials, as it might tend to support Mr. Smith's roof; nor did he adopt the drawing of the City architect, and expressed his fears that, if taken as the basis of contemplated restoration, the corporation would be disappointed, and the work would be far removed from a right restoration.

The Chairman announced the measures in progress for the Suffolk Congress in August; and, after congratulating the Association upon the number and value of papers and exhibitions laid before the meetings during the session, adjourned the society to November 23rd.

BRISTOL SOCIETY OF ARCHITECTS.

ON the 4th inst., the Bristol Society of Architects took their first excursion for the present year, the route being from Bristol to Clevedon. The first halt was made at Abbot's Leigh, where the society was met by the Rev. W. Annesley, the vicar. The excursionists examined the church, a short description of which was read by the honorary secretary, Mr. C. J. Phipps; and then proceeded, by invitation, to the residence of Mr. Bright, where they partook of refreshments. The next visit was to Portbury, which interesting church was examined, and elicited a long discussion, especially as regarded the curious arrangement of the chancel arch. Clapton church was next inspected. The society was met at Clapton by the Rev. H. J. Marshall, the rector. The original design of the church was commented upon and explained by Mr. E. W. Godwin. From the church the party turned their attention to the court-house, a very old and interesting building, concerning which a paper was read by Mr. Warren. The society proceeded thence to Portishead, where it was met by the rector, the Rev. C. F. Norman, who kindly conducted the members over the church, and explained various restorations that had taken place, as also the peculiarities of the chamber in the organ recess. This feature had been first noticed at Clapton, and was seen in its original form in the church of Weston-in-Gordano, next visited. After the church, the Court-house Farm at Portishead was inspected. The original design of this fourteenth century house was explained. They next started for Weston-in-Gordano church, where they were met by the Rev. R. W. Hautenville, who read a paper on the church. From this document it would appear that the church was founded by the ancient family of the Percevals, which has its descent from a branch of the Dukes of Brittany, and was settled in the county of Somerset soon after the Norman Conquest, Robert Perceval, who was styled Lord of Ivery, having attended William of Normandy in his expedition, and been soon after rewarded with the lands of Quantock and East Harptree. Before leaving, Mr. J. B. Atkinson offered some suggestions as to the mode of painting the east wall of the chancel with frescoes, as proposed by Mr. Hautenville. At Walton church, the edifice next visited, the society was met by the Rev. G. R. Begge, who afterwards conducted the party to Clevedon Court. The next and last object of interest to which the excursionists turned their attention was the old church of Saint Andrew, Clevedon, where they were met by the Rev. N. R. Pedder. The party afterwards dined together, and various speeches were made.

THE SLIDE RULE AND A CAREER.

SIR,—For many years I have been a subscriber and constant reader of the *Builder*. Its weekly perusal is a source of much gratification to me, particularly the steady and persistent course you pursue in the cause of health and cleanliness. Continue to battle against filth, the polluting of the rivers, and to encourage the necessity of sending into the houses of the poor and needy an ample supply of Nature's nectar —the waters of the crystal spring—and thousands yet unborn will have cause to bless you.

I was rather startled on reading your number of the 28th ult. On seeing the simple words, "The Slide Rule," it recalled days long gone by. In 1828, now thirty-six years ago, fond of numbers and figures, I was a self-taught surveyor, and used to be employed by the farmers of my village in measuring the harvest land, &c.

I was fully convinced of the utility of the artificer's common sliding rule in the saving of time in computing quantities, and as acting as a proof and a check to calculations once made; I therefore published a short treatise "On the Slide Rule, as applied to the Prime Rules of Arithmetic, the Admeasurement of Timber, Gauging, Land Measuring, &c." A nobleman's steward, on seeing the work, employed me to map and measure a parish, and the park of the mansion, situate in another parish. I also received flattering communications from gentlemen on the easy style in which I had written the work, having rejected all algebraic signs and characters. One of the heads of a great city ironworks' house wrote to me to give his son practical instructions in surveying, and in the end I worked myself into a first-rate practice as a land-surveyor. When the Tithe Commutation and Parochial Assessment Acts came into operation, in 1836, the Commissioners appointed to carry out the Acts determined that all first-class maps should be sealed, thereby becoming evidence, and their quantities or admeasurements indisputable in courts of law. I did many of them; and I believe the first that received the seal of the Tithe Commissioners. I think, therefore, I am fully entitled to call myself a first-class surveyor.

I have now the little book by me; and on perusing it, I do not perceive a single correction to be required, not even an erratum, and am satisfied it would be a useful school-book, and be of good service to carpenters, masons, builders, timber merchants, farmers, &c. I hope, therefore, by God's blessing, to publish another edition of the work, when I will send you a copy.

GEO. OAKLEY LUCAS.

STUCCO AND GRAINING.

"EXCELLENCE of design, skilfulness of execution, combined with the ineffable witchery of æsthetic effect, can impart a value far exceeding that of the mere money-worth of materials, which may, perhaps, be almost *nil*."

So writes "Art Lover;" and I assure him that I should be the last to dispute one word of it. But I do not exactly see the analogy. "Art Lover" seems to imagine that anything cheap must be an imitation of something costly. But I protest against this. Let the humblest among us have art in their dwellings; but let it be art applied to humble materials, without metamorphosing them into a caricature of what is higher. If beauty could not be produced without shams, then let us have shams; but as beauty has been produced, and is being produced every day, without shams of any kind whatever, I wonder how any one, to say nothing of a professed lover of art, can apologise on behalf of practices which, above everything else, tend to fetter art, and prevent it from spreading itself among all classes.

"Art Lover" then contradicts himself in a remarkable way. He commences his defence of shams, by saying that the cheap can often be the beautiful; and then gravely tells us that there are two kinds of stucco—one cheap, and one dear; and if we want our stucco to be above Brummagem quality, we must pay a large price for it. If our stucco is cheap, it is bad—"Brummagem," in fact, and we all know what that means. Stucco, to be sightly, must cost a great deal, and therefore shams—good shams—are nearly as expensive as realities. And what does stucco conceal? Brick, which a little taste would render nearly, if not quite, as beautiful as stone. I have alluded more than once to Messrs. Moses & Davis's warehouse, in Cheapside, and I would recommend "Art Lover" to go and see it, and then consider whether he would veil it in stucco. And I might mention Mediæval buildings innumerable, all over Europe, built of brick, yet of universally-acknowledged beauty. While I cordially agree with "Art Lover" in his remarks on Italian Gothic, I must say it has its beauties, and these are often shown in brick. I cannot understand why any one can wish brick to be concealed under a coating of stucco, and I can only ascribe it to their not knowing what brick really can do, their knowledge of its effect being confined to our streets in general—"long brick walls with rows of slits in them," as Canova is supposed to have said.

But I will leave stucco and go to the other sham that "Art Lover" has specially mentioned, namely, graining. I am fully aware that this requires a certain amount of skill and labour, as I have watched a man graining an entire panel in a street-door. But I will ask "Art Lover" whether this skill and labour could not be applied to some better purpose,—one that would not bear the least shadow of deception. Carving would be far preferable, but perhaps the grainer would like to keep to his brush. Then why could he not paint in geometrical patterns? Graining, at the best, is but a very sorry substitute for what it imitates; while what I recommend would be preferable in the eyes of the poor man to the most costly wood, on account of its gay appearance, and the infinite variety it could assume.

I repeat again and again that art is for all; for the rich, for the poor, for the palace, for the

cottage, for stone, for brick, for rosewood, for deal. Art is always the same, though in a different form to adapt itself to the different class, or to the different material that requires it. Look at dress. Our country people show just as much taste, perhaps much more, in their costume as our very highest classes, without imitating them at all; while, on the other hand, how absurd it is to see one of the lower rank of life aping the fashions of his or her betters. And here I will conclude, hoping I have proved to "Art Lover" that my abhorrence of shams is neither "downright hypocrisy," nor "downright stupidity."

EX STIRPE.

MORE CONCERNING SHAMS.

BY a rather funny misprint in last week's *Builder*, I was made to express my admiration of Greek *pickle* vases instead of *fictile* ones. Though annoyed at the time by a mistake likely to raise a laugh against me, I do not regret it now, because, by adopting this mode of correcting it I have a fair opportunity of returning to the subject of "shams" at once, and calling attention to an institution that ought to receive the marked reprobation of those who protest against all deceptions of the kind, it being nothing less than directly intended to encourage and patronize them. I allude to the Exhibition of Decorative and Imitative Painting at Painters' Hall, where some of the specimens have actually obtained premiums for the proficiency shown in a species of art which some folks denounce as no better than that of *lying*. Graining is surely a merely pardonable peccadillo in comparison with the heinousness of painting the tops of wooden tables with such præterpluperfect skill in mendaciousness that by the eye they are not distinguishable from inlay-work of the most costly marbles and other materials.

Why then, unless their zeal be itself no more than a cheap sham, do not those who inveigh so lustily against sham of every kind attack it boldly and determinedly in its strongholds? And why, with all their vigilance and sharp-sightedness, do they overlook, or else wink at, so much that ought to excite their indignation? Why, for instance, do they not fulminate against floor-cloth painted to imitate a patterned stone pavement with an ornamental border?

Keeping some ammunition in reserve for another occasion, I here add no more than that, though rudely executed, and all but *nil* as regards money-worth of material, many of the plaster vases and other ornaments hawked about the streets by Italian image boys, give evidence of regard to æsthetic beauty infinitely surpassing that which is either shown or aimed at in gold presentation cups, and things of that sort, whose chief merit is, that they may be put into the melting-pot without suffering other loss than that of barbarous design.

ART LOVER.

THE NEW BRADFORD EXCHANGE.

SIR,—As having had some experience in competitions, and having lately had an opportunity of testing the accuracy of Mr. Waterhouse's estimates, and believing that the Bradford Exchange committee are not altogether without a sense of justice, will you allow me to draw attention to a proposal by Mr. W. Eden Nesfield, which appeared lately in the *Bradford Observer?* viz., that a high architectural authority, say the council of the Institute of British Architects, should be called in to examine "Messrs. Lockwood & Mawson's working drawings, in order to see how far they resemble the original drawings." Mr. Waterhouse has estimated the "accepted" design at 38,000*l.*, or 11,000*l.* in excess of the sum allowed! It is scarcely necessary to point out how easy it is for any architect to cut down the cost of a competition design without any risk of the committee finding it out. The suggestion of Mr. Nesfield is, therefore, one which is eminently adapted to save the committee from any charge of injustice, or from such legal proceedings as they would of course subject themselves to in the event of their finally accepting a design which was contrary to their instructions in its most practical and important element;—a suggestion which I sincerely hope the committee will entertain even on the higher grounds of good faith and righteous dealing between man and man; whilst Messrs. Lockwood & Mawson, if they feel confidence in their statement, would, of course, not fail to encourage such a proceeding as has been pointed out, which, while it would clear them from the evident imputation which now rests upon them, at any rate in the eyes of their professional brethren, (viz., competing with a design more than 40 per cent. above the stipulated cost), would be also the only unanswerable and honourable reply which can be made to the other competitors.

I refrain from entering on the fine art question. If Mr. Ruskin fails to set the people of Bradford right, it is surely vain for me to hope, within the compass of a note, to attempt anything of the sort.

EDWARD W. GODWIN, Architect.

P.S. When the practice (which I follow) is to make all the competition drawings part of the contract drawings, of course this in itself would be sufficient guarantee.

METROPOLITAN BOARD OF WORKS.

THAMES EMBANKMENT, &c.

AT the ordinary meeting last week, a report of the Streets Committee was laid before the Board, recommending that the proposition of the Hampstead, &c. Railway Company, to limit the formation of the proposed street from Tottenham-court-road to Chandos-street, be acceded to, provided the company construct the street 60 feet wide, and widen Buckingham-street from the Strand to Duke-street to 30 feet, and undertake to pay for any land, or interest in land, on, over, or connected with their Embankment. The report was agreed to.

A proposal to invite the Prince of Wales to lay the chief stone of the Thames Embankment was withdrawn after some discussion.

A report of the Thames Embankment Committee relative to the Metropolitan District Railway was read. It stated that they have received the following offer from the Metropolitan District Railway Company, viz.,—that they should be allowed to construct their railway from the commencement of the Embankment at Westminster to Cannon-street, in the City, under the proposed Embankment and new street, upon payment to the Board of 300,000*l.*; the Board to pay all compensation involved directly or indirectly by reason of the construction of the Embankment and railway; but to be allowed to construct their low-level sewer from Cannon-street to Great Tower-street, under the intended railway, without paying any compensation to the company. The report recommended that the offer be not acceded to, and that the solicitor be instructed to take all necessary steps for sustaining the principle of the payment by the railway company to the Board of 500,000*l.* for the right of constructing their line; the railway company to pay all compensation to the City Gas Company and other parties whose property may be affected, and to defray the cost of all alterations and diversions of sewers and other works necessary; and indemnify the Board against liabilities from alteration in contracts. The recommendation was adopted.

CHURCH BUILDING NEWS.

Handsworth.—Holy Trinity Church, Birchfield, in the parish of Handsworth, has been consecrated by the Bishop of Lichfield. The church, which, owing to the strike among the workmen in the building trade, is yet incomplete, has been erected by Messrs. Briggs & Son, from the designs of Mr. Chatwin, architect; the estimated cost being 4,000*l.*, of which a considerable sum is yet deficient. The edifice consists of nave, aisles, apsidal chancel, clerestory, and vestry. It is designed to accommodate 612 persons, 300 of the sittings being free. Its extreme length is 117 feet. The nave is 84 feet long, and the chancel 33 feet. The width of the nave and aisles together is 48 feet 6 inches. The outside is of Tower Hill stone, with Bath stone dressings. The inside is of Bromsgrove stone, with Bath stone dressings to the arcade, chancel arch, and windows. There is a large west window, pierced with the usual foliations of the geometrical period of Gothic architecture. It is at present filled with plain glass, but will hereafter receive stained glass, the gift of a member of the College and other friends of the late Rev. H. J. Ramsden, curate of Handsworth. The east window is filled with stained glass, given by the Rev. W. Haughton Freer and the Rev. T. H. Freer, as a memorial of their sister, the late Miss Freer. The subject is the "Resurrection."

Hulme.—The bishop of the diocese has consecrated a new church here, dedicated to St. Michael. The church has cost 4,500*l.*, and the parsonage connected with it an additional sum of 1,060*l.*, both independently of the site. The church stands, with its parsonage, on a site in Lavender-street, about 33 yards east to west, and 43 yards north to south. The general outline of the plan of the church is a simple rectangle, from which the only projections are the north porch and the octagonal baptistery adjoining. The plan consists of a nave—the unusual breadth of which was demanded by the exigencies of the site, as well as desired by the founder,—north and south aisles, and chancel, with double chancel aisles north and south, the latter being seated for the congregation, and the former screened off for organ chamber and for vestries for the clergy and choristers. The style is Early Pointed, and an attempt has been made to work out a design specially suited to the material (chiefly brick), that has been employed. In form the tower is square and unbuttressed, and rises to the belfry stage without even a set off. The tone of its general colour is modified by bands of dark brick at intervals, and narrow windows pierce each face about the middle of its height. The west gable contains a circular window, 15 feet in diameter, consisting of nine foiled circles. Under it are three single lights. The works have been carried out by Mr. Joseph Thompson, as the general contractor, under the superintendence of the architect, Mr. J. M. Taylor, of Manchester.

Bethnal Green.—The church of St. Paul, Bethnal-green, consecrated by the Bishop of London on the 28th of May, is built upon a portion of a site purchased some years since by the London Diocesan Society, and bounded on the north by Virginia-row, and on the east by Princes-place. It consists of nave, north and south aisles, chancel, with north aisle for organ-chamber, and south aisle for singers' chamber, two porches, and vestry, with tower and slated spire at north-east angle. The style is Gothic, of the flowing Middle Pointed period, freely treated. It is built throughout of brick, with stone dressings, from the white measures of the Hollington quarries. Externally the base is formed of red bricks, finished with a blue brick band and splayed course in cement, the whole of the work above being of the best malms, relieved by bands of red and blue bricks, red and blue brick discharging arches, &c. The tower consists of four stages. The building is covered with blue and red slates in bands, and finished with ornamental ridge tiles. The church is lighted by three-light windows in the aisles, with traceried heads, a four-light and three single-light windows at the west end, two double-light windows in the singers' chamber, and a four-light window at the east end. The heads of the large windows are filled in with tracery. The four-light windows are filled with cathedral glass in two colours. The vestry has a two-light window, and the bell-chamber a two-light window and a triangular window enriched with foliations, &c. The roof is open-timbered, with curved braces, &c., to the principals, and boarded, the whole of the timber and boarding being stained and varnished. The heating apparatus is by Haden & Sons, of Trowbridge, Messrs. Hart, of London, supplying the whole of the coronas, brass standards, &c., for the lighting. The carving was done by Mr. Sansom. The whole of the works have been carried out by the contractor, Mr. Thos. Ennor, of London (Mr. Gibson, builders' foreman), under the immediate superintendence of the architect, Mr. W. Wigginton, of London.

Kempsford (*Gloucestershire*).—A new church for the hamlet of Whelford, in the parish of Kempsford, has been consecrated by the Bishop of Gloucester and Bristol. The church has been built from designs by Mr. G. E. Street. The site was the gift of the lord of the manor, Sir G. East, bart. The funds have been provided by voluntary contributions. The church consists of a nave, chancel with apsidal termination, oak porch, and vestry. The windows of the apse are filled with painted glass, and the roof polychromed.

Books Received.

Facilities of the Law for Small Investments of Real Property and Improvement of Dwellings. By THOMAS HARE. London: E. Faithfull.

AT a special meeting of the Social Science Association, held in London, on 20th April, 1864, Lord Stanley, in the chair, a paper was read by Mr. Hare, on "The facilities which the law may give for small investments in real property, and the means they would afford of improving the dwellings of the people, and the condition of the working classes." A draft bill was submitted to the meeting, and Messrs. Beal, Godwin, Hare, Roberts, and other gentlemen appointed as a committee to consider the subject. The pamphlet under notice is Mr. Hare's paper, in a printed form. His object is the very important one of leading to a legislative effort that shall enable the voluntary action of the people at large to proceed effectually in the work of supplying proper house accommodation for all classes. The conclusion he has formed is that it is only by enabling the great masses of the working population, especially those congregated in large cities, to become the owners of their dwellings,—

not necessarily in fee, but at least for interests of considerable duration,—that there is any rational hope of rendering those dwellings what they ought to be; and that the measures which would afford to the lower classes the means of such ownership, would be at the same time in the highest degree beneficial to classes who, although socially in a higher position, are still, for the most part, earning their subsistence by their labour.

Railways in China: Report upon the feasibility and most effectual Means of introducing Railway Communication into the Empire of China. With a Map. By SIR MACDONALD STEPHENSON. London: Adlard, Bartholomew-close, 1864.

THE first introduction of railways into India was brought about by Sir Macdonald Stephenson, who urged the matter at a time when Indian railways were looked upon as a very unlikely thing to be realized in our day. Important lines of railway have since then been introduced into India; and we should not wonder to see a similar result in a few years in China, which is inhabited by an industrious and active community, very different from the effeminate and indolent Hindu, and far more likely to appreciate the commercial and other advantages of railway communication. Already, as in our own country before the railway era, China is pervaded by canals; and once let the Chinese have a tasting of the still greater benefits derivable from railways, and probably they will imitate ourselves very closely in the extension of the system throughout their empire. The final suppression of the rebels would much hasten such a result.

Sir Macdonald Stephenson proposes first of all to make a short line from Canton to Fatshan, a length of fifteen miles, which could be completed in fifteen months. This line, he considers, will decide the whole question. Twenty-seven of the largest English merchants established at Shanghai have already petitioned the Imperial Commissioner and Governor of the province of Keangsoo for the concession of a line of railway from Shanghai to Soochow, a distance of sixty miles, and it appears to be confidently anticipated that this will be granted. Sir Macdonald states that the Governor of Canton, Prince Kung, and many of the Chinese people are becoming interested in the subject of railways, and abundant reasons are given for believing that, if but one short line be constructed, the Chinese people will immediately demand others.

Sir Macdonald has sketched out a comprehensive system of railways, centering at Hankow. The line extending thence eastward to Shanghai would be 650 miles long, that running south to Canton and Hong Kong 850 miles long; north to Pekin, 800 miles; and west to India, about 1,600 miles. He proposes, if it be possible, to have five lines commenced, which, although each would be complete in itself, and possess the command of a large traffic, might ultimately become links in the larger system first mentioned. The proposed short lines would be as follows:—From Pekin to Tientsin, 70 miles; Shanghai to Soochow, 60 miles; Canton to Hong Kong, 90 miles; Canton to Fatshan, 15 miles; and Canton to Sinan and Samshui, 40 miles.

There seem to be no great physical difficulties in the way of the construction of the proposed lines. They are not only direct, but lie, in nearly all cases, along the valleys of great rivers, and in fine alluvial soil, well cultivated, and capable of contributing traffic.

The low price of Chinese labour, and the industrious habits of the people, give great promise to the whole project. The Chinese are already acquainted with extensive canal works, earth works, masonry, &c., and it appears that their work is well done. Sir Macdonald states, that the value of materials and labour may be taken at the following rates, collected at various sources:—Granite (rough squared) in place, per cubic foot, 3s. 6d.; sound hard timber, 2s. per cubic foot; earthwork, 6d. per cubic yard; mat and bamboo building, suitable for temporary residences, stores, sheds, &c., 1*l.* 10s. per 1,000 cubic feet, this kind of construction being strong, dry, and impervious to rain. The wages of masons, stone-cutters, carpenters, &c., are about 1s. 6d. per day, or if by the month, 22s.; ordinary labour varying from 6d. to 1s. per day, according to locality.

The map which accompanies the report is on a large scale, showing the whole of the Chinese Empire; and it also traces out proposed junctions of the Indian railway system with the projected Chinese railways.

Transactions of the National Association for the Promotion of Social Science, Edinburgh Meeting, 1863. Edited by G. W. HASTINGS, LL.B., General Secretary of the Association. Longman & Co.

IN this goodly volume of 900 pages there are many papers of more or less importance and interest, on Jurisprudence, Education, Punishment and Reformation, Public Health, Social Economy, and Trade and International Law. In our own more especial province there are, under the head of Public Health, a paper by Miss Nightingale on the Sanitary Statistics of Native Colonial Schools and Hospitals; one by Provost Lindsay, on Leith and its Sanitary Efforts; one by the Rev. W. Graham on the sanitary state of Newhaven, near Leith; and several on the causes which modify public health, among which are one on the contamination of water by the imperfect drainage of towns and villages, by S. Macadam, M.D.; one on "How People may Live and not Die in India," by Miss Nightingale; and one on the cleansing operations of Edinburgh as compared with other large towns, by H. D. Littlejohn, M.D. There are also papers on the improvement of the public health, including one by R. Elliott, M.D., on the ventilation of human dwellings; and various minor and miscellaneous communications on the subject of the public health. The papers in the other sections are far too numerous to mention; and the whole forms a valuable body of information on the wide subject of social science.

First Annual Report (to Social Science Association) of the Coroner for the Central District of Middlesex, 1862-3. By EDWIN LANKESTER, M.D., F.R.S. London: E. Faithfull. 1864.

A VALUABLE series of reports will, no doubt, be ushered into public notice by this first of its kind. Dr. Lankester is a very competent reporter on such a subject, and his statement is both interesting and important. The population of the district in which his inquests have been held, is 805,975, whilst the inquests held have been 1,080. There has thus been held one inquest for every 746 persons in the population. The population in 1851, was 664,827, and the inquests from 1857 to 1861, inclusive, averaged 879 per annum, or one inquest to every 755 of the population. The number of inquests, therefore, have slightly increased during the year Dr. Lankester has held the office of coroner as successor to Mr. Wakley.

The crime of infanticide is six times more frequent in Paddington and St. Giles's than in Islington, and is twice as prevalent in Hampstead as in St. Marylebone, and twice as great in St. Pancras as in Islington. Suffocation from unintentionally overlaying infants occurs in a large number of cases, with first-born children. Drink occasions not a few cases of suffocation of infants.

The highest number of suicides occur in November and April, whilst December has only one more than July, August, and September. Men prefer cutting throats and hanging, women the less butcherly and savage modes of poisoning and drowning.

Out of 48 cases of burning to death, 13 only occurred in males, whilst 33, or nearly three times the number, occurred in females. Crinolines amongst women and want of wire guards to fires amongst children,—and amongst women too,—are prominent causes of death from burning.

Falls from ladders and scaffolds, &c., 60 in number, frequently occurred during intoxication, but old men are more liable to such accidents than young.

The report contains some instructive statistics in a tabular form.

VARIORUM.

"Journal of the Bath and West of England Society for the Encouragement of Agriculture, Manufactures, and Commerce. Vol. xii., part 1. London: Ridgway, 1864." This volume contains the usual number of papers on various subjects of interest to agriculturists and others, among which is a paper on Arboriculture, by F. R. De la Trehonnais, in which the method of removing large trees for the adornment of Paris is described, together with sketched illustrations of the waggon for this purpose, invented by M. Barillet Deschamps, which reminds us of a similar British invention.——"The Engineer's, Mining Surveyor's, and Contractor's Field Book. By W. Davis Haskoll (Lockwood & Co.)," consists of a series of tables with rules and notes for plotting traverse surveying, and giving difference of level, with corresponding horizontal distances in taking levels with the theodolite, and for setting out curves and slopes without calculation. It is in a handy form for the pocket.

Miscellanea.

NEW PROMENADE PIER AT LYTHAM.—Operations for the construction of a new promenade pier at Lytham have just been commenced. Mr. E. Birch, C.E., of London, is the engineer. When completed the pier will be in a line with Dicconson-terrace. It will be upwards of 900 feet in length and will extend from the promenade to within a few feet of the low-water mark. The pier will be erected on cast-iron piles, and in principle will be somewhat similar to that at Blackpool.

ROYAL ASTRONOMICAL SOCIETY.—The president of the Royal Astronomical Society, Mr. Warren De la Rue, held a *conversazione* on Saturday evening, at Willis's Rooms, which was honoured with the presence of more than 500 members of the scientific world. The collection of objects of astronomical interest brought together on this occasion was unique, and sufficed to give a *coup d'œil* of the history of instrumental astronomy. Several interesting lectures and expositions were delivered during the evening.

DEATH FROM FOUL AIR IN A CELLAR.—At the Fisherman's Tavern, Nottingham, recently, Rebecca Attenborough, maid-servant, went into the cellar for some ale: not returning, she was followed by Samuel West, who also remained. The landlord, Samuel Kirk, feeling alarmed, also descended, but returned greatly exhausted, foul air having got into the cellar. A young man, named Jennings, was then let down by ropes, but in a short time shouted to those above to hoist him up. Others also descended, but with no better success. At length three men succeeded in bringing the servant up, but every effort to save West was unavailing, as the unfortunate man, after being in the cellar upwards of an hour, was got out, but soon afterwards expired. The girl and Jennings are in a dangerous condition.

UTILIZATION OF METROPOLITAN SEWAGE.—The Select Committee of the Commons have had further meetings; and among those examined were Mr. S. H. Gael, of Lincoln's-inn, as to Acts of Parliament concerning the sewers; Mr. Alderman Mechi respecting his particular views as to liquid sewage; and Dr. Frankland as to the pollution of rivers, and the state of the Thames in particular throughout its course. He recommended the formation by the legislature of some competent authority to superintend and regulate the course of the river. The best means of utilizing the sewage, he considered, was to use it in a liquid state. Mr. G. H. Walker, of Rugby, was also examined as to the use of the Rugby sewage, of the profit of which he spoke favourably, especially as regarded green crops. He applied from 500 to 1,000 tons per acre per annum, at a cost of about 500*l.* The sewage itself cost him 50*l.* He estimated the value of grass at 28*l.* an acre.

NEW ROYAL INSURANCE OFFICE IN BRISTOL.—The workmen have now removed the barricading in front of this building, and it will, in a short time, be occupied for the business of the company. The back portion of the premises will be rebuilt, as soon as convenient arrangements can be made for the tenants. Designs for the building were submitted in competition to the directors under motto, and those of Messrs. Pope & Bindon, of that city, were chosen; and, under their superintendence, the building has been erected. The ground-floor is occupied as the offices of the company, and consists of a large general office, with board-room, private office, &c. The upper portions of the building are occupied as offices of the Bristol Docks and Railways, and the Mercantile Marine Companies. The front of the building towards Corn-street is, in its general features, Italian in design, of the Palladian type, the carvings being a free adaptation of conventional foliage of the same character. It is constructed of Bath stone, with columns of red Aberdeen granite and gray Pennant. The carvings represent the arms of the cities where the principal offices of the company are situate, and to the keys of the windows, capitals of columns, &c., the Liver has been introduced.

LMON WEIRS.—A specification of the man- of constructing a fish-pass over a weir 6 feet by 30 feet broad, to be modified according rcumstances, designed by Mr. William For-, C.E., has been adopted by the Fishery artment of the Home Office; and printed s, signed by two inspectors of fisheries, have issued by authority.

RCHÆOLOGICAL FREEMASONS.—It is reported a grand Masonic archæological meeting will place at Glastonbury, in July next. After eying the Masonic antiquities of the place, xcursion will be made to Wells, to inspect architectural beauties of the cathedral and copal Palace, the renowned workmanship of masons of old.

NOTHER EXHIBITION IN DUBLIN.—The Dublin ter Garden Company intend to celebrate the ning of their spacious building, now in course rection, in the Coburg Gardens, by an Inter- onal Exhibition, which is to commence next , and remain open for about six months. exhibition will include manufactures, raw erials, fabrics of all kinds, machinery, the arts, &c. When the exhibition has been ed the building will be opened as a perma- exhibition, somewhat upon the principle pted at Sydenham.

TREET IMPROVEMENT IN BIRMINGHAM. — The n council have, after many years' delay, now rmined on the continuation of Albert-street Dale-end. The work is estimated to cost ., but from 7,000*l.* to 10,000*l.* have already n paid in connexion with it. The new street , however, be acquired on exceedingly mode- terms. The new thoroughfare will afford ortant accommodation for the town. Land iven for the purpose by Colonel Inge, Mrs. ford, and the governors of the Free Grammar ool, on condition that the corporation proceed h the new street; and the last-named also r to assign a plot of 500 square yards of d for the purpose of widening and improving k-street, Mass House-lane, and Moor-street.

DECORATION OF ST. PAUL'S.—The windows, the igns for which we mentioned last week, are gifts respectively of the Drapers' Company l Mr. Brown. The designs have been re- ned, that the cartoons may be proceeded with. e committee are also expecting from Professor nnorr the designs for two other windows, for apse, the gifts of the Goldsmiths' Company l Dr. Rogers. Those which have been sent over l have been approved, are said to be "powerful, et, and religious in character." There is every son to expect that the first work of pictorial in the cathedral will be Mr. Alfred Stevens's ign, executed in mosaic, for one of the span- ls of the dome, of which the preliminary rk has already been prepared by Sig. Salviati, Murano: the final operation will very shortly commenced in the cathedral.

THE CANYNGES SOCIETY, BRISTOL.—The anni- sary of this Society, which has for its object restoration of the church of St. Mary Red- f, was held on the 8th instant. A sermon s preached in the church by the Rev. J. R. odford. A collection was then made, which ounted to 41*l.* 9s. 7½d. At the annual meet- , subsequently held, Mr. S. W. Lucas pre- ed. Mr. C. S. Clarke, hon. sec., read the ort, which said,—

"The annual subscriptions and other donations for the r ending 31st December, 1863, amounted to the sum 179*l.* 3s.; and for the year ending 31st December last, the sum of 142*l.* 6s. These amounts are exclusive of instalments paid on subscriptions to the 'Lucas nd.' In addition to the above amounts, the sum of l. 6s. 6d. was collected during the years 1862 and 1863 the box kept in the church, and 68*l.* 2s. 6d. from the ations of visitors. The following has been the progress the restoration since the last meeting, viz.:—The toration of the north transept, the north end of tran- t, with the buttresses from the ground to the parapet, h large north window; and the six clerestory windows d flying buttresses, parapets, pinnacles, &c., on the d and west sides, have been completed. The north- st clerestory (the portion between the north transept d the tower) has been restored with five windows, ng buttresses, parapets, pinnacles, and is completed. the interior, the masonry of the ceiling, and the pillars ween the clerestory windows, have been cleaned and tored. The six pillars in the chancel have been cleaned d restored, and a portion of the screen on the south- st side has been completed, and the stone seating at east end of the Ladye Chapel has been restored. ur committee are sorry to find that the condition of tower has become very serious, rendering it necessary st steps should immediately be taken for its preserva- n. The committee have therefore to invite contribu- ns to meet the expenses of the restoration of the wer."

hanks were voted to Mr. Lucas, to Mr. Alderman rector, to the Architect, the Honorary Secre- ry, and others.

THE CORK SCHOOL OF ART.—The result of the late examinations—being five months' work—gives a satisfactory amount of prizes and awards amongst the students of the central school, and also of the national and other schools in connexion with it. Twelve of the works executed in the Central School have been awarded medals, and six have been selected for national competition; and of those who presented themselves for examination in geometry, freehand, and model, a large number have passed successfully.

HAMMERSMITH AND CITY RAILWAY.—This new line of railway was opened for public traffic on the 13th instant. The line forms a junction with the Great Western Railway, commencing at Green-lane, about a mile from the Paddington station, passing by Notting-hill and Shepherd's-bush, terminating at the Broadway at Hammersmith. A short branch, forming a junction with the West London Railway, gives access to Kensington and the districts south of the Thames.

THE OPENING OF SOUTHWARK AND WATERLOO BRIDGES.—A report upon the Bill of Alderman Salomons in the Commons, to facilitate the traffic of the metropolis by improving the communications across the Thames, was presented last week to the court of common council. The Bill authorises the purchase of Southwark, Waterloo, and other bridges, to be opened free to the public. Alderman Salomons got an earwigging for presuming to introduce such a Bill without the authority of the common council, who authorized their committee to prepare a petition to Parliament against the Bill; the sheriffs, attended by the remembrancer, to present the petition.

THE BIRMINGHAM MEMORIAL OF THE LATE PRINCE CONSORT.—The models for the statue intended to be erected as a memorial of the late Prince Consort, in Birmingham, have been submitted by Mr. Foley, R.A., the sculptor, to the committee entrusted with the duty of superintending the work. In both instances the figure is habited in the robes of the Order of the Garter. The one least encumbered with masses of drapery was approved, and the artist was requested to proceed with the execution of his commission, which, we understand, he has promised shall have the precedence of others of the same kind which he has undertaken. The architectural canopy, as our readers are aware, is entrusted to Mr. J. H. Chamberlain. — *Midland Counties Herald.*

COTTAGE IMPROVEMENT SOCIETY.—The annual meeting of the subscribers and friends of the Central Cottage Improvement Society, has been held at the Whittington Club, Arundel-street, Strand, under the presidency of Mr. J. S. Smith. The object of this society is the collecting together, in one museum, all models, plans, books, and papers of every description bearing upon the subject of labourers' dwellings, extracting from them as much practical matter as possible, and publishing so much of the same as may from time to time appear desirable. The council announce that 2,500 sets of plans and specifications of their cottages have been circulated, and probably from 400 to 500 cottages have been erected, in which the general features of those plans have been adopted and the published estimates for them maintained.

FLOWER-SHOWS IN LONDON WINDOWS. — The subject of growing flowers in London windows was treated of last week, at the Royal Horticultural Society, when the Rev. E. Bayley, rector of St. George's, Bloomsbury, explained the plan which had been pursued in portions of his district, and the extraordinary results produced by the competition and emulation which had been excited among the poorer classes of his parishioners, residing in localities the most unfavourable to the rearing of plants and flowers. The rev. gentleman stated the results of the experiment during the last four years. His parish comprises 17,000 inhabitants, 6,000 or 7,000 of whom are steeped in poverty, and living in an exceedingly precarious manner; yet amongst these a love of flowers had been found to prevail, as some had reared plants in the dingiest of atmospheres and most unwholesome of dwellings, even resorting to broken jugs and teapots in default of garden-pots. He also gave a very cheering description of a movement in connexion with the flower-show, called the "Clean and Tidy Movement," the object of which was to induce people, however, poor, to take a pride in their dwellings, and to keep them as clean as possible.

A CEMETERY FOR ASHTON.—The Ashton-under-Lyne Town Council have resolved "That it is expedient that a public cemetery should be provided for the borough of Ashton-under-Lyne, and the general purposes committee be authorised to take all necessary measures for carrying out this resolution; and that a petition to the Queen in council be approved, and the common seal be affixed thereto."

A ROYAL BOTHY.—Previously to her departure from Balmoral last autumn, Her Majesty, feeling the want of a shelter-house from rain showers on Lochnagar, gave orders for the erection of a small dwelling, or simply a bothy, having a "but and a ben," or outer and inner apartment. The bothy is about finished, and stands a few hundred yards from the "white pole," known to Lochnagar tourists, and nearly three miles from Altnaguisac. The building is oblong, having a two-stalled stable in the same line with the royal apartments. For nearly two miles the building materials had to be carried without carts. The building is under the superintendence of Mr. Beaton, architect, of Balmoral.

THE MIDDLE LEVEL LITIGATION.—An important decision has been given in the Court of Queen's Bench. The question at issue was whether the Middle Level Commissioners were liable for the neglect of their servants in respect of the inundations in Norfolk some time ago. Mr. Justice Mellor and the Lord Chief Justice held they were not. Mr. Justice Blackburn was of a different opinion. The case, however, will be taken to the Court of Error.

VENDOR AND PURCHASER.—The suit Viscount Palmerston *v.* Turner, before the Master of the Rolls, arose out of an agreement whereby the Earl of Malmesbury, on behalf of himself and the trustees of his marriage-settlement, of whom Lord Palmerston was one, agreed to sell, and the defendant to purchase, certain lands in Hampshire. The agreement contained a stipulation that if, from any cause whatever, the purchase should not be completed on a certain day, the purchaser should pay interest from that day until the completion of the purchase. Considerable delay was caused by a defect in the vendor's title. The Master of the Rolls held that delay caused by the state of a title, provided it be not wilful, falls within the provision of "any cause whatever;" and that, therefore, in this case, interest was payable by the purchaser.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.—At the last meeting, Mr. W. Page Smith delivered a lecture "On the Symbolical Character of the Architecture of the Middle Ages." Amongst the views enforced by the lecturer was one to the effect that during the period which elapsed between the Crusades and the Reformation, the Freemason art-workmen employed on the sculptural decorations of churches and collegiate establishments introduced designs derogatory, not only to the dogmas, but some of the services, of the Romish Church, as well as various others symbolical of the coming reaction. He illustrated his observations by reference to numerous examples. The discourse was followed by a discussion, in which Mr. Hurlstone, Mr. E. B. Lamb, Mr. Stewart, Mr. Herand, and others took part.

THE BUNHILL-FIELDS BURIAL-GROUND.—At a recent meeting of the Court of Common Council a memorial, signed by Mr. Remington Mills, M.P., Mr. Samuel Morley, and many more, was presented, praying the court to take steps to secure the preservation in its present condition of Bunhill-fields burial-ground. The memorialists stated that they were informed that the leases under which the corporation of London had held the Finsbury prebendal estate for more than 300 years, will finally run out at Christmas, 1867, and that the estate will then pass into the hands of the Ecclesiastical Commissioners. Of that estate the burial-ground formed part, and they prayed the court to make such arrangements before the expiration of the lease as might prevent the perversion of the ground to common uses. The ground, they said, was set apart as a place of interment by the corporation 200 years ago; and down to 1852, when it was closed as a place of sepulture, more than 120,000 corpses had been interred in it. "In this burying-ground," they observe, "are interred men whose memory and writings are among the most precious of our national heirlooms." The court passed a unanimous resolution referring the memorial to the City Lands Committee for them to consider what steps should be taken for preserving the burial-ground in its present state.

REMARKABLE ESCAPE.—A CAUTION. Mr. Taylor, jun., architect, of Whitehall, was on Saturday inspecting the works of the Blackfriars Station of the London, Chatham, and Dover Railway, and ascended the scaffold to the south pier by a ladder, to a height of upwards of 40 feet. When descending, some empty railway carriages ran into the scaffolding, shattering it and the lower part of the ladder upon which Mr. Taylor was, leaving him clinging for life to the broken ladder, suspended aloft amid the falling parts of the scaffold, till he was rescued by the workmen who descended to him.

GAS.—At the tenth annual meeting of the East Grinstead Gas Company a dividend of ten per cent. was declared. Although the price of gas was reduced last year from 7s. 6d. to 6s. 3d. per 1,000 cubic feet, still the amount from private consumers rose to within 50*l.* of the previous year; and in consequence of the increase of business it has become necessary to enlarge the works. The cost, estimated at 200*l.*, will be paid from the reserved fund, and still leave about 100*l.* for future emergencies.——The Harwich Gas Company have declared a dividend of 6 per cent. for the past year, and the shareholders have determined to increase their capital 2,000*l.*, in order to carry out the extension of their works, rendered necessary by the increase of their trade.——The Burslem and Tunstall Gas Company have declared dividends of 10 per cent. on original shares, and 7½ per cent. on new, for the past year, free of income-tax; and have reduced the price of their gas by a scheme of discounts, and speak of a farther reduction in price.——The town of Machynlleth has been lighted with gas. The price is to be 7s. 6d. per 1,000 cubic feet.

N tenths of the purchase-money may remain on mortgage or cont at 5 per cent to be paid in nine years, by half-yearly instalme but the whole or any part of the balance may be paid off at any t with out notice.—Particulars, plans, and conditions of sale m obtained any day before the sale, at the Old King's Head, C Clapton; of Messrs. RUSSELL & DAVIES, 59 Coleman-street, London, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C. the Foreman on the Estate; and at the Place of Sale.

PER CLAPTON, MIDDLESEX.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on MONDAY, the 20th, 1864, at TWELVE for ONE o'clock, a further Portion of that eligible FREEHOLD PROPERTY, free of tithe, and land-tax, comprising about 2 acres, situate on the Rendlesham-road leading from Downs-road to Upper Clapton within five minutes' walk of the Hackney Downs and within an hour's ride of the city. Nine-tenths of the purchase-money may remain on mortgage or contract at five per cent. to be repaid in not more than seven years, or the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained at the Mart; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; of the Foreman on the Estate; and at the Place of Sale.

LEYTON, ESSEX. Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on MONDAY, the 27th, 1864, at TWELVE for ONE o'clock, about 25 Lots of eligible FREEHOLD BUILDING LAND, free of tithe and land-tax, with frontage to the Vicarage road, Grange Park, Goldsmith-road and Grove Road. The property is suitable for the erection of Villa or Cottage Residences, and is situate within ten minutes' walk of Low Leyton Station, on the Loughton Railway, and within a mile and a half of the Stratford and Lea Bridge Stations on the Great Eastern Railway. The purchase money may be paid on a deposit of £10 per cent. and the remainder in nine years, by half-yearly instalments, with interest on the unpaid balance at 5 per cent.; but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions may be obtained at the Land Rey, Leyton; of Messrs. RUSSELL & DAVIES, Solicitors, Coleman-street, London, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

BROMLEY, MIDDLESEX.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the AUCTION MART, London, on TUESDAY, the 27th of JUNE, 1864, at TWELVE for ONE o'clock, in Thirty-two Lots of eligible FREEHOLD BUILDING LAND, known as Devon's road, Bromley, and the new streets leading thereto, called Furze, Box, and Gale Streets, within three miles of the Bank, half a mile from the railway station at Bromley and Bow, and a mile from those at Stepney and Limehouse. Nine-tenths of the purchase-money may remain on mortgage or contract at 5 per cent. to be paid in nine years, by equal half-yearly instalments, but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of Sale may be obtained at the Inns in the neighbourhood; of Messrs RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

CAMBRIDGE BARRACKS, OXFORD STREET.—To Builders, Carpenters, Farmers, Firewood Cutters, and Others.—The Valuable Materials and Fittings of the remainder of the Barracks and large Block of Buildings in Orchard street.

MR. J. A. SMITH has received instructions from the Contractors to SELL by AUCTION, on the PREMISES as above, on TUESDAY and WEDNESDAY, JUNE 21 and 22, at TWELVE o'clock precisely, about 500 large LOTS of excellent MATERIALS and FITTINGS, comprising 2,000 feet run of large yellow timber in long lengths, 14,000 feet run of 9 by 3, 10,000 feet of deals of various dimensions, 3,000 feet run of oak joists, 7 feet by 3 inches, 450 yellow rafters 12 feet each, 100 squares extra fine flooring, 40 pairs of framed principals 35 feet span, 100 room and other doors, several pairs of folding ditto, large quantity of sashes and frames, 5,000 cords lime and fire bricks, 10,000 pan and roman tiles, 20 squares of York paving, stairs, and other marble chimney-pieces, 50 feet of sheet lead, kitchen-ranges, several tons of iron in iron columns and railing, wrought and cast iron, 1,0 0 feet wrought iron steam piping, upwards of 60 fathoms of excellent firewood in large stacks, a large quantity of other materials. The whole to be sold without reserve, and cleared from off the ground in three days. Catalogues to be obtained on the Premises, and of the Auctioneer, King street, Portman-square, who will forward them by post on application.

THE ENTIRE STOCK, at ELEVEN for TWELVE, on account of the number of Lots.—To Builders, Carpenters, Cabinet and Pianoforte Makers, and Others.

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Camden-terrace, Camden-road, on MONDAY, JUNE 27th, at ELEVEN for TWELVE, a large quantity of yellow, white, and pine planks, deals, and battens; also 3,000 feet wide pine board, 150 squares prepared floor-boards, 10,000 feet moulding, dry cut stuff, lime-tree, mahogany boards, four marble chimney-pieces, ladders, 24 doors, and useful materials.—Auction Offices, 2, Cardington-street, Hampstead-road.

WOOLWICH.—To Carpenters, Joiners, Engineers, and Others. A Stock of First-class Tools.

MESSRS. J. & E. BADDELEY will SELL, at 139, POWIS STREET, Woolwich, on FRIDAY next, JUNE 24, at ELEVEN for TWELVE o'clock precisely, on account of the Executors of Mrs. T. James, DECEASED, by direction of the Trustees of Mr. T. James, DECEASED, the best makers; an assortment of ironmonger's cutlery, plated goods, &c. Also the leave of the commencing premises, fixtures, and fittings.—The stock may be viewed the day prior, and morning of sale; and catalogues forwarded on application to J. & E. BADDELEY, Auctioneers, 20, Fenchurch street, E.C.

NEW SOUTHGATE, HANTS.—Valuable Freehold Estate, with Building Ground, close to Havelock Park.

MESSRS. PRICE & CLARK are instructed to SELL by AUCTION, at GARRAWAY'S Coffee House, Change alley, Cornhill, London on TUESDAY JULY 5, at TWELVE ONE o'clock, the important FREEHOLD ESTATE known as Edmonton, New Southgate, comprising a capital and substantially built Family Residence, with stables, outhouses, garden, orchard, and meadows; the whole containing about eight acres, and is well adapted for the formation of a public Institution, or for a handsome family residence. The property adjoins Havelock Park, and is near to St. Bartholomew's Church and the newly-erected beautiful residences in that locality. The surrounding property is rapidly rising in value and the capabilities of this particular estate as a building site are highly desirable, offering an advantageous opportunity to capitalists, builders, and others to form a good sound profitable investment. The property may be viewed until the sale by application to Mr. MILLER, 7, Union-street, Portsea; and particulars with plans may be had 14 days preceding the Sale of Messrs. HELLARD & SONS, Solicitors, Portsmouth; and in London at GARRAWAY'S, and the Offices of PRICE & CLARK, 48, Chancery-lane.

HAYDON, SURREY.—First-class Freehold Building Land, in a charming and picturesque locality, being part of the Hallog-park Estate.

MESSRS. BLAKE will SELL by AUCTION, at GARRAWAY'S COFFEEHOUSE, Change-alley, Cornhill, on TUESDAY JUNE 21, at TWELVE o'clock, highly valuable FREEHOLD BUILDING SITES, of about half an acre each, approached by a capital private road, 30 feet wide, with lodge entrance, lying in an elevated position, commanding beautiful views, and having a substratum of gravel. The land is admirably adapted for the erection of superior residences, and in order to guard against possibility of the character of the neighbourhood being deteriorated, the purchasers will be restricted from building any other than detached houses. Gas and water mains and sewers are already laid to the road. The terminus of the South Croydon Railway, which is now in course of construction, will be within a few minutes' walk of the land, and the Waddon and East and West Croydon Stations are within easy distances of it. Particulars, with plans, may be had four clear days before the Sale at Garraway's Coffee-house, Change-alley; of Messrs. CURREY & HOLLAND, Solicitors, 9, Old Burlington-street, London; and of Messrs. BLAKE, Croydon.

HORNSEY RISE.—Piece of Freehold Building Land.

MESSRS. GADSDEN & ELLIS will SELL by AUCTION at the MART, on TUESDAY, JUNE 21st, at TWELVE o'clock, a PIECE of valuable FREEHOLD BUILDING LAND, on the south side of Shaftesbury-road, Hornsey Rise, near the Shaftesbury Tavern, having a frontage of about 177 feet by a depth of about 100 feet. Road and sewers made. There is a good demand in the vicinity for houses of the annual value of 35l. and 40l.—Particulars may be had of Messrs. WARE & WESTALL, Solicitors, 1, Copthall-court, Throgmorton-street; at the Mart; at the Shaftesbury Tavern; and of Messrs. GADSDEN & ELLIS, 18, Old Broad-street, E.C.

YORKSHIRE, adjoining a Railway Station.—To Manufacturers and Others requiring cheap Coal and Railway and Water Transit, and to Brewers. TO BE SOLD by AUCTION, by

MESSRS. DIXON & BUSH, at the CROWN INN, Rotherham, Yorkshire, on WEDNESDAY, the 22nd day of JUNE, at FIVE p.m.—Lot 1 FREEHOLD LAND, with Beerhouse, Cottage, and Building thereon, adjoining, and having a frontage of nearly 500 feet to the Masborough station of the Midland Railway, Rotherham, comprising a site of 6,800 square yards. Coal pits, and the means of water communication with the sea, are within a few hundred yards. Lot 2 Freehold Hotel, called the "Red Lion," and the yard, stables, loose boxes, and outbuildings, comprising a very large site, in Bridgegate, being in the middle of the town of Rotherham, and close to the Court house.—For plans and further particulars apply to Mr. JOSEPH BADGER, Solicitor, Rotherham.

SURREY. An eligible FREEHOLD ESTATE, consisting of about 63 acres of superior land, possessing beautiful sites for building purposes, forming part of the Hall Mead Estate, in the important village of Sutton, about a mile from the station, with City and West-end terminii.

MESSRS. RUSHWORTH, JARVIS, & ABBOTT will SELL by AUCTION, at GARRAWAY'S COFFEEHOUSE, Change-alley, Cornhill, on FRIDAY, JULY 8th, the very valuable ESTATE, above referred to, which is situate in the rural and favourite village of Sutton, about a mile from the railway station, and little more than half an hour's journey from London, and, on completion of the lines now making, the distance to London will not only be greatly reduced, but the additional facility of the terminus in Fleet-street of the Chatham and Dover Railway will be afforded. The whole is freehold, and (except on a small portion) the land tax is redeemed. The land is unlimited, and the elevated parts command most pleasing and picturesque views, especially for over this favourite county, and offer tempting sites for the erection of gentlemen's villas on a large or moderate scale. The Estate will be sold in lots suitable for capitalists, private gentlemen desirous of erecting their own residences, and speculative builders; and it possesses good brick earth.—Printed particulars and plans are preparing, and may be obtained fourteen days before the Sale, of CHARLES MORGAN, Esq., Solicitor, 15, Old Jewry Chambers, Cheapside, E.C.; and at the Offices of Messrs. RUSHWORTH, JARVIS, & ABBOTT, Saville-row, W. and 19, Change-alley, E.C.

SECRETARY George William Lovell.
ASSISTANT SECRETARY—John J. Broomfield.

Insurances against Loss by Fire are effected by the PHŒNIX Company upon every description of Property, in every part of the world, on the most favourable terms.

The promptitude and liberality with which its engagements are always met by this Company are well known; and the importance of its relations with the public may be estimated from the fact that since its establishment it has paid more than Eight Millions Sterling in discharge of Claims for Losses by Fire.

Insurances with this Company expiring at Midsummer must be renewed within fifteen days thereafter, or they will become void.

Receipts are now ready at the principal Offices, Lombard-street and Charing-cross, and with the respective Agents throughout the United Kingdom.

GUARDIAN FIRE and LIFE ASSURANCE COMPANY, No. 11, Lombard-street, London, E.C. Established 1821. Subscribed Capital, Two Millions.

LIFE DEPARTMENT.—Under the provisions of an Act of Parliament, this Company now offers to new Insurers EIGHTY PER CENT. OF THE PROFITS, AT QUINQUENNIAL DIVISIONS, OR A LOW RATE OF PREMIUM without participation of Profits.

Since the establishment of the Company in 1821, the amount of Profits allotted to the Assured has exceeded in Cash value 600,000*l.* which represents equivalent Reversionary Bonuses of 1,958,000*l.*

After the Division of Profits at Christmas 1859, the Life Assurances in force, with existing Bonuses thereon, amounted to upwards of 4,730,000*l.* the Income from the Life Branch 237,000*l.* per annum, and the Life Assurance Fund, independent of the Capital, exceeded 1,618,000*l.*

FIRE DEPARTMENT.—Insurances are effected upon every description of property, at home and abroad, at moderate rates.

No expense is incurred in effecting a New Insurance beyond the payment of the Annual Premium and Duty, when the Premium amounts to 5s.

Claims liberally and promptly settled.

Notice is hereby given, that Fire Policies which expire at Midsummer must be renewed within fifteen days at the Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the kingdom; otherwise they become void.

Applications for Prospectuses and Agencies to be made to the Secretary.

THE LAND SECURITIES COMPANY (Limited). Capital, 2,000,000*l.*

DIRECTORS.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

	Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, East End (54, Old Broad-street, E.C.), Office of International Financial Society.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, an l of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the negotiation of special investments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32 Charing-cross London S.W.

NORWICH UNION FIRE INSURANCE SOCIETY.

NOTICE.—MIDSUMMER RENEWALS.

Mercantile and Dock Insurances at the reduced rates.

The business of the Company exceeds 70,000,000*l.*

The duty paid to Government for the year 1862 was 83,062*l.* and the amount insured on farming stock 10,086,332*l.*

A bonus of three-fifths of the profits periodically made to parties insuring, who have thus from time to time received sums amounting in the aggregate to 440,000*l.*; and the Society now holds a LARGE RESERVE applicable to a future Bonus.

The rates of premium are in no case higher than those charged by the other principal Offices making no returns to their insurers.

For prospectuses, apply at the Society's Offices, Surrey-street, Norwich; and 29, Fleet-street, E.C.

CITY of LONDON.—FORE STREET and CRIPPLEGATE BUILDINGS.—Valuable PROPERTY TO BE LET by TENDER, on a long Lease or Leases, for rebuilding or other improvements, subject to present unexpired terms; comprising Shops in Fore-street, Nos. 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, and 22; in Cripplegate-buildings, Nos. 6, 7, 8, 9, and 10, being the Cripplegate Tavern; also the premises known as the White Horse-yard, occupied by Mrs. Scholes. The frontage in Fore-street is 221 feet 8 inches; in Cripplegate-buildings, 109 feet 6 inches. The whole comprises more than half an acre, being about 24,540 square feet. Possession of a small portion can be given at Midsummer, 1864; of the larger portion at Midsummer, 1865; and of Nos. 12, 13, 14, 15, and 22, Fore-street, in 1867; and of the Cripplegate Tavern, in 1878. The property may be tendered for in whole or in part, to suit the views of the proposers. The estate is in close contiguity with the Manchester and Leeds markets. Likewise with the proposed Finsbury Station of the Metropolitan Railway, and with which it might, no doubt, hereafter be placed in direct communication, and with the terminus of the North London Railway. The site is within three minutes' walk of the Bank of England; and by the new railways, ready communication will be had with every part of the metropolis and suburbs, with the whole of the United Kingdom, and with the docks and port of London. Possession may be had as before stated, subject to the materials being sold and cleared away. The day fixed for sending in the Tenders is MONDAY, the 9th of JUNE next.—For permission to view, apply to the tenants or occupiers. The particulars and plans, and conditions of letting, may be seen at the Offices of Mr. RICHARD SUTER, Architect and Surveyor, 25, Gracechurch-street, E.C.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses and coachhouses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 23 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

BUILDING LAND at CHITT'S HILL, WOOD GREEN, overlooking three different counties, and fronting the high road, eight minutes' walk from the station and Alexandra Park, TO BE LET for the erection of superior Villa Residences, which are in great demand in this beautiful locality. Term, 99 years. Money advanced if required.—A plan may be seen, and particulars obtained, on application to S. HEWITT, Architect and Surveyor, 101, Great Russell-street, Bloomsbury, W.C.

BUILDING LAND, Reading, Berks.—FOR SALE, by PRIVATE CONTRACT, in lots suited for the erection of private Dwelling-houses, several acres of FREEHOLD BUILDING LAND, forming part of the rapidly improving Western Suburb of the Town. The roads on the Estate are excellent. The property is ornamentally timbered, and several portions of it are well fenced in with hedges, and planted with trees and shrubs of many years' growth. Distance from the centre of the Town and three Railway-stations, about a mile. A second Church is being erected in the immediate neighbourhood. Money advanced if required.—Apply to Mr. W. WEEDON, Solicitor, Reading.

ALUM BAY ESTATE, FRESHWATER, ISLE of WIGHT.—BUILDING LAND TO BE LET, for a term of ninety-nine years, land-tax redeemed. Rent in advance.—Particulars may be obtained of Mr. AUGUSTUS FRERE, Architect and Surveyor, 29, Henrietta-street, Covent Garden, London; of Mr. WILLIAM RAWLINS, Solicitor, Winchester; of Mr. C. F. FISHER, Solicitor, Ventnor; or of Mr. S. M. BAKER, Solicitor, Ryde, where plans showing the disposition of the estate may be seen.—The journey from London via Lymington and Yarmouth, can be accomplished in about five hours.

BUILDING LAND.—TO BE LET, on the Grand Junction Canal, LAND for BUILDING, bounded on one side by the Great Western Railway, and on the other by the Grand Junction Canal. The Canal skirts runs at the Estate. It is situated at Southwell, in Middlesex, and is well adapted for Wharfs, Manufactories, Cottages, and the like.—For terms, apply to the Southall Brick Company (Limited), 3, Adelaide-place, London Bridge.

FREEHOLD LAND TO BE SOLD or LET, for Building, in plots of half an acre, seven miles from Town, ten minutes' walk from the Ealing Station; delightfully situate.—For plans and particulars, apply to Mr. LOMAX, Land Agent, 8, Orchard street, Portman square. Trains from Farringdon street.

VALUABLE FREEHOLDS in Lothbury, in the City of London, close to the Bank of England.—The Owners of the above Property, which consists of TEN FREEHOLD HOUSES, Nos. 18 to 27, on the west side of Tokenhouse-yard, Lothbury, in the City of London, having a frontage to the west side of Tokenhouse yard of 200 feet, or thereabouts, and containing an area of upwards of 8,800 square feet, will be offered, on THURSDAY, the 30th day of JUNE next, to open sealed TENDERS from persons desirous of PURCHASING the same. The property will be sold subject to the existing tenancies, to determine when notices have been given, and it is believed that vacant possession of the whole can be given on the 29th SEPTEMBER next. This property being in close proximity to the Bank of England, and extending over an area of upwards of 760 square yards, is most eligible for the erection of large and commodious offices for public companies.—Full particulars and plans of the property may be had with forms and conditions of Tender, on application to Mr. HENRY FLETCHER VALLANCE, Solicitor, 12, Tokenhouse-yard, Lothbury, E.C.

BRIGHTON.—To BUILDERS.—TO BE DISPOSED OF, an old-established BUILDER'S BUSINESS, in a first-rate situation, doing a good trade, with facilities for increasing the same.—For particulars, apply to Z. K. Post-office, Brighton.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views. — Apply to A. B. 192, Bermondsey-street, S.E.

TO BE LET, with immediate possession, valuable BUSINESS PREMISES, of a very extensive and complete character, within ten minutes' drive of the Bank of England, with a commodious dwelling-house and counting-house, a supply of water, and ranges of warehouses, with paved yards.—Apply to Messrs. TENNANT & DARLEY, 4, Raymond-buildings, Gray's-inn, London, W.C.

GREAT TOWER STREET.—TO BE LET, by TENDER, on a Building Lease, direct from the freeholders, for a term of sixty years, the PREMISES, Nos. 49 and 51, Great Tower-street (licensed as the Bell Public-house), having a frontage of about 29 feet 6 inches to the above street.—For conditions of Tender, &c. apply to Mr. W. B. GARRETT, 36, Great Tower-street, E.C.

TO SMALL BUILDERS.—LAND TO BE LET, at Peckham, in Bell's Gardens-road, near the Globe Tavern, Hill-street. Term of lease 99 years. The bricks and timber supplied as an advance.—Apply, H. E. CANNEY, the Grange, Willesden Green. An appointment will be made in town if more convenient.

UPPER NORWOOD, close to the Crystal Palace.—TO BE SOLD, a capital FREEHOLD ESTATE comprising two well-built residences, and about nine acres and a half of land, admirably situate, and exceedingly well adapted for the erection of villa residences. The land yields capital brick earth, and affords a splendid opportunity for a successful building operation.—For particulars and terms apply to Mr. J. WINTER, Land Agent, Westow-hill, Norwood, S.

BUILDING LAND, near Windsor.—Messrs. BUCKLAND & SONS offer for SALE by PRIVATE CONTRACT, as at TEN ACRES of FREEHOLD LAND, situate at Clewer, and having long frontages to the new road leading from Windsor to Reading. This property affords a very valuable opportunity for erecting men, there being a considerable depth of brick earth, and a church is already built on the property.—For terms apply to Messrs. BUCKLAND & SONS, Estate Agents, Windsor.

LEWISHAM, KENT, near the Junction Station of the Mid and North Kent Lines.—TO BE LET, TWO PLOTS of GROUND, each for a Pair of Small Villas. Also, a Plot for Three Pairs. Ground-rent 3l. per house. Apply to THOMAS MILLS & SON, Builders and Agents, 36, York-street, Westminster, S.W. Leases 99 years, direct from freeholders. No solicitors.

LARGE WHARF, fronting the Thames at Hammersmith, with good Dwelling house attached, TO BE LET or SOLD. Also Land for Wharfs or Manufacturing Premises. A substantial river wall already built.—Apply to Mr HEATH, No. 4, Bread-street Buildings, E.C.

WOODFORD, ESSEX.—WANTED to PURCHASE, about Twenty Acres of FREEHOLD LAND, at Woodford, or in the vicinity. Extensive frontage and price very.—Particulars with price, to be sent to Mr. FREDK. PAGE WALTERS, Architect and surveyor, 77, Queen-street, Cheapside, London, E.C.

FREEHOLD, overlooking Bushy Park, Hampton Court.—Extensive views, gravel soil, good drainage, water gas, boating and fishing near, omnibuses to two stations, thirty five minutes from the City. Leases for one, two, or three lots sold in one advantageous terms.—Mr WALKER, Surveyor, Hampton Wick; Mr. WELLS, 48, Kensington Gardens-square.

EXTENSIVE PREMISES TO BE LET, comprising a large piece of ground inclosed with walls and folding gates 240 feet deep by 60 feet wide, fronting the main road within 1/4 mile of the Bank, with or without a capital eight-roomed house—occupied by JOHN GOODMAN, 25, Hertford-road, and Commercial-road East.

HERTFORD, next the Corn Exchange.—TO BE LET, TWO COMMODIOUS SHOPS with HOUSES and PREMISES attached, suitable, and well situated for an Upholsterer's or Corn factor's business. For particulars, apply to Mr. SAMUEL ANDREWS, Castle-street, Hertford.

FIRST-RATE SITES of FREEHOLD BUILDING LAND TO BE LET, on the usual terms, at Lower Norwood, close to the station; at Teddington, very near the station; and at Tolworth, Surbiton, &c. Apply to Mr. LUMLEIAN, Architect and Surveyor, 5, Crown-court, Old Broad-street, E.C.

TWICKENHAM.—TO BE LET, a BUILDER'S YARD and HOUSE, with stabling, offices, and extensive sheds. Railway adjoining yard. Well adapted for the timber, stone, or coal trades. The owner of the premises has no objection of joining an active man in that line. Coming in about June with furniture.—Apply to Mr. GEORGE HILL, Builder, Staton-yard.

WEARDE STONE QUARRIES, LIMITED.
The Stone produced from these Quarries has been proved to be the most durable of any in the market, and can be had for Pitching in any sizes; also for Macadamizing.—Samples sent, with prices, on application to the Manager, E. M. CROKER, Gunnislake, Cornwall.

PATENT CONCRETE STONE COMPANY (Limited).—The Directors have granted LICENCES for six of the Counties of Great Britain, and are prepared to entertain further Propositions for LICENCES for the MANUFACTURE of this valuable MATERIAL.—Plans for the erection of Works, and full instructions, on application.—By order,
THOMAS PIPER, Secretary.
36, Parliament street, S.W. May, 1864.

PAIR of SERPENTINE MARBLE BUST PILLARS for SALE. From the Brett Collection. They are fine specimens of the Marble. Price 11l.—For particulars, inquire by letter, of R. NORMANDY, 12, Sekforde-street, E.C.

At W. SQUIRE & CO.'S,
Slate Merchants and Slaters.
OAK WHARF 201, CITY ROAD E.C.

ROBERT WHITE, SLATE MERCHANT, SHEFFIELD.
ROOFING SLATES, CISTERNS, and SLABS supplied in quantities of not less than five tons, from the Depots, Bangor Mold Junction and Garston.

CORNISH SLATES.—The old Delabole Slate Quarries, Delabole, Camelford, Cornwall, are now producing a large quantity of ROOFING SLATES. Persons wishing to be supplied with the production of these Quarries can be so, by applying to respectable Slate Dealers in town and country.

OLD DELABOLE SLATE QUARRIES, Delabole, near Camelford, Cornwall.—The old Delabole Slate Company beg to inform their customers that their Quarries are now producing a larger quantity of ROOFING SLATES than they have hitherto done. Supplies can now be obtained.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depots,
BANGOR, GARSTON, SALTNEY, CHESTER, and GLOUCESTER.
Prices forwarded and estimates given on application.
1, BOLD TERRACE, CHESTER.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, Lime, and Old Bricks. Dry Rubbish delivered per barge, in any quantity alongside the Thames.

TO BUILDERS and OTHERS.—Superior RED and STAINED TILES, RED KILN BRICKS, and ORNAMENTAL WARE in Stock and to Order, at PRIMLINS Brick and Tile Factory, Wateringbury, Kent. Can be put into Medway barges, or on the South Eastern Railway.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are Invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

OATES & BAYLIE, STOURBRIDGE.

ROUGH STOCKS.—A MILLION can delivered at the Bricklayers' Arms or Croydon Stations, rate of 7/10/0 a week. Specimens may be seen and price obtain application to FREDERICK KING, Land Agent, Pope's Head Cornhill, E.C.

STAFFORDSHIRE Vitrified Blue Bri and Stable Paving SUPERSEDED by the HAMPST METALLIC BLUE BRICK, Manufactured by the BIR WALTHAM CLAY COMPANY (Limited). Engineers, Archi Contractors, and Builders are invited to inspect these goods Londou Depôt, Nine Elms Station. The superiority of these p bricks and of all the blue goods is, that they are of a solid te and uniform colour all through, and do not, when chipped, ex that red appearance so much complained of in staff fordshire g For street crossings and pavement they are unequalled in wear closeness. Red Facing Bricks, Ridge Tiles, Quarries, and Pa Tiles of all descriptions.—Price-lists may be had, on applicati the Company's Offices, Nine Elms Station.

PLASTER of PARIS.—The ON London Maker, the best and the oldest established (1830), ROBESON
MOUNT PLEASANT, GRAY'S INN ROAD, HOLBORN.
The cheap country made article is sold by nearly all the de agents who pretending manufacturers, care use no quality. Bo fine and fine Plaster unequalled. Good plaster saves labour Vexat.

87, BISHOPSGATE STREET WITHOUT, LONDON, E.C.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, No. 6849.

3s. 9d.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

R. B. EDMUNDSON & SON. STAINED GLASS OF EVERY DESCRIPTION,

Ancient and Modern, for Ecclesiastical and Domestic purposes. Wall Painting. Monumental Brasses, &c. &c. Designs and Estimates on application.—Specimens may now be seen at the Exhibition of Stained Glass, Kensington Museum, Nos. 25, 30, 7, and 28.

WORKS, NEW WAKEFIELD-STREET, OXFORD-STREET, Near the BRIDGE, MANCHESTER.

STAINED GLASS WINDOWS for CHURCHES and DWELLINGS.

HEATON, BUTLER, & BAYNE,

New King-street, Covent Garden, W.C. Removed from Cardington-street, Hampstead-road.

Specimens at the Exhibition of Stained Glass Windows, South Kensington Museum.

20 and 21, PRINCES STREET, SOHO, LONDON, W.

TERRA COTTA and Fine STONEWARE POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Perminals, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION, 1862.

MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 29 and 40, Upper Belgrave-place, Pimlico, S.W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. Sadly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Juries," page 583, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

Also several thousand feet of Sicilian, vein, statuary, and coloured slabs, garden vases, figures, &c. Approved bills at four and six months. May be viewed two days prior to the sale, and catalogues had at Carrara Wharf; and of PULLEN, HORNE, & EVERSFIELD, 39, Fore-street, City, and 40, Parliament-street, Westminster.

PUDDING-LANE.—Building Materials of three Houses.

PULLEN, HORNE, & EVERSFIELD are instructed by the Worshipful Company of Fishmongers, to SELL by AUCTION, on the PREMISES, on WEDNESDAY, JUNE 29, at TWELVE, in lots, all the valuable BUILDING MATERIALS and FIXTURES of three Houses, Nos. 24, 25, and 26, Pudding-lane, Lower Thames street, of the usual description.—May be viewed the day previous. Catalogues had of W. B. TOWSE, Esq., Fishmongers' Hall; of RICHARD BUTER, Esq., Architect, 28, Fenchurch-street; and of PULLEN, HORNE, & EVERSFIELD, 39, Fore-street, E.C. and 40, Parliament-street, S.W.

GREAT WESTERN RAILWAY.—Annual Clearance Sale.

PULLEN, HORNE, & EVERSFIELD are instructed by the Directors of the Great Western Railway Company, to SELL by AUCTION, at the GOODS STATION, Paddington on TUESDAY, JULY 5th, at TEN for ELEVEN, the UNCLAIMED PROPERTY in the Passengers' Department, comprising the usual assortment of wearing apparel, umbrellas, bags, railway rugs, and numerous other effects. Also a quantity of miscellaneous property in the Goods and Parcels Department; and a 20-horse power steam-engine, left over from the former Sale. May be viewed the day previous, with Catalogues only, which may be had at 6d each, of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, Westminster, and 39, Fore-street, City.

ESHER, SURREY.—A beautifully timbered Freehold Estate of 165 acres, charmingly situate, adjoining Claremont, and STIPOLA, Paddington on TUESDAY, JULY 5th, at TEN for ELEVEN, the UNCLAIMED PROPERTY in the Passengers' Department, comprising the usual assortment of wearing apparel, umbrellas, bags, railway rugs, and numerous other effects. Also a quantity of miscellaneous property in the Goods and Parcels Department; and a 20-horse power steam-engine, left over from the former Sale. May be viewed the day previous, with Catalogues only, which may be had at 6d each, of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, Westminster, and 39, Fore-street, City.

MESSRS. DEBENHAM & TEWSON have received instructions to SELL, at the MART, on THURSDAY, JUNE 30th, at TWELVE, in three lots (unless previously disposed of as a whole by Private Contract), the valuable Freehold and nearly Tithe free ESTATE, known as Fairmile, situate in the most healthy parish of Cobham, Surrey, adjoining Claremont Park, the noble seat of H.M. the King of the Belgians, and about three miles from the Esher Station. The land is high, is belted and studded with a choice variety of well-grown and really handsome timber, the surface is nicely undulating, and it commands from several points beautiful and extensive views over the richly-wooded country round Claremont, Leatherhead, and Weybridge. It has a considerable frontage to an excellent road, the air is as pure and bracing as any in the kingdom, and there is fine spring water. An estate possessing greater natural advantages for the formation of a gentleman's park it would be difficult to find within a like distance of London, or it could be advantageously divided into plots for villa residences, the numerous attractions of the locality causing the demand for houses of a good class to exceed greatly the supply.—May be viewed by cards, to be had of the Auctioneers; and particulars, with conditions of sale, obtained of R. HALL, Esq., Solicitor, No. 49, Coleman street; and of Messrs. DEBENHAM & TEWSON, 80, Cheapside.

BRULAH HILL, NORWOOD. Twenty four Acres of valuable Freehold Building Land, within about a mile of the Norwood Junction, Crystal Palace, and Lower Norwood Stations, and about five minutes' walk from the Dartmouth Heath Station, affording access to London Bridge, Victoria, and Charing Cross, at frequent periods throughout the day.

MESSRS. DEBENHAM & TEWSON will SELL, at the GUILDHALL COFFEE HOUSE, near Guildhall, on WEDNESDAY, JULY 6, at ONE punctually, in one lot, 21a. 1r. 7p. of very valuable and nearly all FREEHOLD BUILDING LAND, situate on the western slope of Brulah Hill about three minutes' walk from the church. The land possesses considerable frontage to the Grange-road and Osborne-road. It commands extensive and beautiful views, is surrounded by a rapidly increasing neighbourhood, and offers eligible sites for villas or cottage residences. The whole is Freehold with the exception of 1a. or 2p. which is Copyhold of the Manor of Croydon.—Particulars of Messrs. THOMAS & HOLLAMS, Solicitors, Commercial Sale Rooms, Mincing-lane; and of the Auctioneers, 80, Cheapside.

SYDENHAM AND FOREST HILL.—Valuable Plots of Freehold Building Land, between the Catford Bridge and Forest-hill Stations, offering capital sites for private residences and shops.

MESSRS. DEBENHAM & TEWSON will SELL, at the GUILDHALL COFFEEHOUSE, opposite the Guildhall, on WEDNESDAY, JULY 6, at ONE punctually, in ten lots, several plots of FREEHOLD BUILDING LAND (land tax redeemed), situate within a few hundred yards of the Catford-bridge Station, fronting the main road from Catford bridge to Lower Sydenham, including a very eligible piece of la. 2r. 20p. adjoining the residence of R. Brooks, esq., having a frontage of 257 feet; a valuable corner plot for a public house, and other capital sites for shops and private residences. Also several plots, situate in Canterbury and Winchester roads, Stanstead-lane, offering eligible sites for villas.—Particulars of Messrs. DE JERSEY & MICKLEM, Solicitors, 15a, Gresham street; and of the Auctioneers, 80, Cheapside.

IMPORTANT CITY PREEHOLD, comprising the Spread Eagle Hotel, Gracechurch-street, with extensive Premises and Yard, containing an area of 6,400 square feet, well adapted for advantageous rebuilding.

CHINNOCK, GALSWORTHY, & CHINNOCK are instructed to SELL by AUCTION, at the GUILDHALL COFFEE HOUSE, near the Bank of England, on THURSDAY, JULY 14, at TWELVE (unless previously disposed of by private contract), a valuable FREEHOLD PROPERTY, situate in the very heart of the City, where all the commercial interests of the Kingdom are now being centered: comprising the principal portion of that well-known establishment the Spread Eagle, Gracechurch street, with extensive premises and yard, having a back entrance to Lombard-lane Market; the whole containing an area of nearly 6,400 square feet, and forming one of the most important building sites to be found in the City, its advantageous position rendering it admirably adapted for rebuilding as offices, where only a very large rental may be created, thus offering a desirable opportunity for the investment of capital.—Part of the purchase may be allowed on. LUCAS, Esq., Solicitor, 30, Fenchurch-street; of Messrs WALES & SPARKS, Surveyors, 6, Great St. Helen's, E.C.; at the Mart; and of Messrs CHINNOCK, & CO. Land Agents and Surveyors, 11, Waterloo-place, Pall-mall.

UNDER A BILL OF SALE, WESTMINSTER.—PAPER-HANGINGS.

MR. KEMP will SELL by AUCTION, on TUESDAY, 21st JUNE, at the Prince of Orange Artillery-row, Westminster, at ONE, without reserve, 17,000 pieces of PAPER-HANGINGS, WHITELEAD, MARBLES, GRANITES, and Effects.—Catalogues at the Offices, 62, Coleman-street, Bank.

FREEHOLD BUILDING LAND, Battersea, Surrey, close to the New Park, and only 2½ miles from Hyde Park Corner.

GEO. TODD will SELL by AUCTION, on WEDNESDAY, 6th JULY, at GARRAWAY'S COFFEE HOUSE, Change alley, Cornhill, at TWELVE for ONE o'clock, the Plots of FREEHOLD BUILDING LAND, suitable for the erection of villa and cottage property, and well adapted for the creation of a considerable income in freehold ground rents, including a valuable plot at the corner of Park-road and Elche street, admirably adapted for the erection of a first-class tavern.—Particulars, with plan, may be had of Messrs. H. & F. LIEBSTER, Solicitors, 1, Church-row, Newington Butts, S.; and at the Auctioneer's Offices, Battersea Bridge-road, Battersea Park, S.W.

CANADIAN MANUFACTURES from the Paris Exhibition of 1855, and the International Exhibition of 1862, and now exhibited at the Crystal Palace, Sydenham

MESSRS. FULLER & HORSEY are instructed by the Directors of the Crystal Palace Company, on behalf of the Canadian Government, to SELL by AUCTION, on WEDNESDAY, JUNE 22, 1864, at TWELVE o'clock, in the WEST GALLERY of the Crystal Palace, the COLLECTION of MANUFACTURES exhibited by Canada in the Paris Exhibition of 1855, and since removed to the Crystal Palace, at Sydenham: comprising a carved drawing-room suite, in walnut, of centre and card tables, couch, six chairs, easy and cane ditto, and five-screens, a handsomely-carved 6-feet walnut sideboard, a 7-octave square grand pianoforte, by Hood, Montreal, in rosewood case; a planing, tongueing, and grooving machine, to take in plank 14 inches wide; boring and moulding machines, a patent thrashing machine, reaping ditto, a flour-mill, a weighing machine, capable to 2,000 lb.; a fire-engine, with 5-inch barrels, suction and branch; portable forge and bellows, pair of circular bellows, steel edge-tools, agricultural implements, a large signal-lamp with reflector, a refrigerator, a canoe, wooden phaëton, trotting match cart, a wheelbarrow sledge for five persons and driver, quantity of models, including the Victoria-bridge over the river Saint Lawrence, the House of Representatives and part of the Harbour of Montreal, mahogany 4-feet pillar centre, right and horizontal shew cases, saddlery and harness, axle arms, boots and shoes, sables, and furs, 2 bear-skin rugs, woollen fabrics, birch keels, specimens of lumber, floor, staghne, glue, deal pine and boxwood and wood casks, specimens of sashes and doors, large timber planks, an ash bull 12 feet 8 inches by 4 feet 9 inches in diameter, a bass ditto, 12 feet by 4 feet 9 inches in diameter, a walnut ditto, 10 feet 4 inches by 3 feet 5 inches in diameter, specimens of marble, granite, minerals, and ores, 5,000 pamphlets on Canada, a quantity of packing-cases, and a variety of other effects.—May be viewed the day preceding, when Catalogues may be had at the Place of Sale; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

RAILWAY CONTRACTORS' PLANT AND IMPLEMENTS, DEVIZES AND HUNGERFORD.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on WEDNESDAY, JULY 6, 1864, and following days, at ELEVEN for TWELVE o'clock precisely, on ground's lent on the Railway Station at Hungerford and Devizes, CONTRACTORS' PLANT and IMPLEMENTS used in the Construction of the Berks and Hants Railway, including 190 capital earth wagons, side and end tip, for ten tons contractors' rails, 5,000 sleepers, 100 navvy-barrows, 600 wheeling-planks, 250 loads sound fir timber, 30 loads ash and elm, 5 dobbin-carts, 6 tumbril-carts, 1 timber carriage, 1 light cart, dog cart, phaëton, harness, 100 large wood centres, 500 transoms, battens, 3 tons new bar and cold rod iron, 10 ton scrap iron, weighing machine, scales and weights, stocks and dies, smiths' tools, screw jack, leather bands, 12 circular saws, office furniture, iron safe, new wire lines, 5 tarpaulings, pug-mill, the erection of stabling and workshops, portable office, new wagon-wheels and axles, 2 trollies, quantity of stone, 1,000 yards gravel, 4 water-tanks, 2-horse-power chaff cutting machines, 1-hand-power ditto, quantity of fire-wood, and numerous other effects.—To be viewed on Tuesday previous and mornings of Sale, when catalogues may be had on the Works, and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

WILTS.—Residence, with 18 acres of Land, Valuable Freestone Quarry, and Extensive Buildings, at Rudloe Firs, in the Parish of Corsham, two miles from the Box and Corsham Stations on the Great Western Railway.

MESSRS. DARLEY & SONS will offer for SALE by AUCTION, at the ANGEL HOTEL, CHIPPENHAM, on FRIDAY, the 24th day of JUNE, 1864, at FOUR o'clock in the afternoon (unless previously disposed of by private contract), a commodious Residence, with large garden, situate at Rudloe, in the Parish of Corsham, near the Great Western Railway, and a valuable Freestone Quarry, with masons' and smiths' shops, sheds, stables, and every convenience for working the valuable stone which underlies the estate. Also two closes of very fertile Arable Land, containing 14a. 3r. 4p. with large yard, stables, barn, and other buildings. These lands are free of great tithes, and held by grant for 1,000 years, from the Bishop of Salisbury, at a peppercorn rent, and are Copyhold of Inheritance of the Manor of Corsham. The above property forms a most desirable investment for a capitalist wishing to embark in the freestone trade, the increasing demand for Box stone being greater than the supply.—Particulars may be obtained of the Auctioneers, and of Mr. T. ABDY FELLOWES, Solicitor, Chippenham.

TO TIMBER MERCHANTS, CABINET AND PIANOFORTE MAKERS, BUILDERS, CARPENTERS, AND OTHERS.

The well-seasoned STOCK of a Timber Merchant, the Lower part removed for convenience of sale, and will be sold under circumstances that preclude the slightest hesitation.

MESSRS. J. J. CLEMMANS & SON will SELL by AUCTION, on the PREMISES, No. 28, Worship-street, Finsbury, on TUESDAY, JUNE 21st, 1864, at ELEVEN for TWELVE o'clock, the above, comprising 340 feet Spanish and Honduras Mahogany, in boards, logs, and planks, including some very fine rowle and mottle Veneer Pitches and Table Logs; 10,000 feet prime dry Birch, 150,000 feet fine fig'red Spanish Mahogany, Rosewood, Walnut, Maple, and Ebony Veneers; 1,000 Pianoforte Desks, Turned Table Legs, Saws, Rollers, Timber Trestles, &c.—May be viewed the day prior to and morning of sale. Catalogues may be had on the Premises; and of the Auctioneers, Spital-square, Bishopsgate, and Holywell-row, Finsbury.

IN BANKRUPTCY.—To Wholesale and Retail Ironmongers, Builders, and others.

MR. PEAKE is ordered by the Assignees of Mr. Thomas Caston, Bankrupt, to SELL by AUCTION, in Lots, on the PREMISES, No. 6, Bridge house place, Southwark, on TUESDAY, JUNE 21, and WEDNESDAY, 22nd, 1864, at TWELVE o'clock, a very valuable and well-arranged STOCK of GENERAL IRONMONGERY: comprising every description of stock necessary for prosecuting the above business; also the Shop Fixtures and Fittings, comprising excellent counters, drawers, cash-desks, &c. & c.—The stock must be cleared out on THURSDAY, the 23rd day of JUNE.—May be viewed the day previous and morning of sale, and catalogues obtained of GEORGE GRAHAM, Esq., Official Assignee, No. 25, Coleman-street; of THOS. KEENE, Esq. Solicitor, 77, Lower Thames-street; and at Mr. PEAKE'S Auction Offices, 44, Tooley street, Southwark, S.E.

VALUABLE FREEHOLD ESTATE, situate at TUNBRIDGE WELLS.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the MART, on TUESDAY, JUNE 28, at TWELVE o'clock, in seven lots, valuable and important FREEHOLD PROPERTY, beautifully situate at Tunbridge Wells, viz.:—

Lot 1.—ROMANOFF HOUSE, immediately opposite the common, adapted for a first-class family residence, which purpose it has been used for many years; or for a spacious family residence, having every accommodation for a numerous family, and capable of producing when furnished a large rental during the season, with capital garden, having a separate access in the rear, which might be appropriated with great advantage to building purposes.

Lot 2.—ROSE-HILL HOUSE, adjoining lot 1, having a very considerable frontage to the high road. It is approached by a carriage drive, and contains numerous bed and dressing rooms, drawing-room, sitting-room, large dining room, complete domestic offices, lawn and pleasure grounds. This residence is equally adapted for a large family desirous of residing in the beautiful neighbourhood of Tunbridge Wells; or it might let the same as Lot 1, when furnished at a very large rental during the season, with great accommodation being especially wanted for that purpose. There is also space for building another residence if required.

Lot 3.—ROMANOFF LODGE, a detached residence, most beautifully situate at Tunbridge Wells, near to Lots 1 and 2, placed on an eminence in the centre of the Common, commanding on all sides most lovely, extensive, and beautiful views. It is equally adapted for a large family desirous of residing in the beautiful neighbourhood of Tunbridge Wells; or it might let the same as Lot 1, when furnished at a very large rental during the season, with great accommodation being especially wanted for that purpose. There is also space for building another residence if required.

Lot 3.—ROMANOFF LODGE, a detached residence, most beautifully situate at Tunbridge Wells, near to Lots 1 and 2, placed on an eminence in the centre of the Common, commanding on all sides most lovely, extensive, and beautiful views. It is equally adapted for a large family desirous of residing in the beautiful neighbourhood. Contains seven bed and dressing rooms, drawing-room, dining room, breakfast room, and detached offices; in the occupation of W. Harriman, esq. on lease, at a rent of 16l per annum.

Lots 4, 5, 6, and 7.—FOUR RESIDENCES, pleasantly situate, Nos. 1, 2, 3, and 4, Bank Terrace, facing the Common, each contain seven bed and dressing rooms, drawing room, dining-room, and domestic offices; in the occupation of highly respectable tenants, at rents amounting together to about 60l per annum.

May be viewed by cards only.—Particulars had at the Calverley Hotel, Tunbridge Wells: Rose and Crown, Tunbridge; Ship, Brighton, of Messrs. ALLEYNE & WALKER, Solicitors, Tunbridge Wells; of Mr. R. JULL, Surveyor and Estate Agent, Tunbridge Wells; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange, London.

The TILLINGTON ESTATE, a valuable Freehold and Copyh Property, with Residence, Pleasure grounds, Land, and Buildings, the whole containing about 120 acres, and immediate contiguous to Petworth Park.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the MART, on TUESDAY, JUNE 28th, at TWELVE o'clock in Lots, the TILLINGTON ESTATE, a valuable Freehold and Copyh Property, situate at Tillington, in the county of Sussex, within short distance of the Petworth Station, on the London, Brighton, South Coast Railway, and on the high road from Midhurst to Petworth, and immediately contiguous to and overlooking Petworth House and Park, the residence and property of Lord Leconfield, the whole containing nearly 120 acres.

Lot 1.—TILLINGTON HOUSE, a valuable Freehold Estate, situate in the beautiful village of Tillington, and comprising a very comfortable residence, containing eight bed and dressing rooms, drawing-room, dressed in the Elizabethan style, with window opening to a balcony with verandah, commanding most extensive and beautiful views of the south downs and the richly surrounding country; library, dining-room, and detached offices; outbuildings, consisting of large barn, coach-house with granary over, cart-horse stable, three-stall stable, cattle and piggeries, and beautiful pleasure grounds, beautifully laid out, commanding also the most lovely and extensive views, small paddock, kitchen garden, and three orchards, plantation, and several enclosures of arable land, the whole containing 31a. 1r. 39p. in hand. A considerable portion of the land might be appropriated to building purposes, leaving sufficient quantity for occupation with the residence, gardens, and grounds

Lot 2.—COCKSLANDS, a most enjoyable small pleasure-farm, situate near to Lot 1, and comprising an old Elizabethan farmhouse, good farm-buildings, a detached homestead, and several inclosures of first-rate arable land, lying well together; also a detached orchard and a piece of pasture land in upper meadow, the whole containing 76a. 0r. 29p. in hand. Upon this beautiful little pleasure-farm is several sites adapted for a residence. About 34 acres are copyhold of the honour and manor of Petworth, the remainder is freehold.

Lot 3.—A FREEHOLD COTTAGE, beautifully situate on rising ground, on the high road from Petworth to Midhurst, with stable, and a piece of meadow and arable land in the rear, containing together 1la 2r 28p. in the occupation of Mr. Barrett, at a rental of 20l per annum. This lot is beautifully adapted for the erection of a gentleman's residence.

Lot 4.—A FREEHOLD inclosure of Arable Land, situate at the corner of the road from Midhurst to Petworth, close to the village of Tillington, opposite the Church, admirably adapted for building purposes, and containing 7a. 0r 2p.

Lot 5. FOUR FREEHOLD COTTAGES, with buildings and good gardens, situate in the Church, admirably adapted for building purposes, and containing 7a. 0r 2p.

Lot 6.—A PIECE of Freehold Meadow Land, in upper meadow containing 3r. 1p.

May be viewed, and particulars had at the Swan, Petworth; of Messrs. BAILEY, SHAW, SMITH, & BAILEY, Solicitors, 5, Bernerstreet, Oxford-street; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange

HORNSEY, near Crouch end, Middlesex.—Very valuable and beautiful Freehold Building Estate, laid out with the greatest taste and judgment, planted with rare conifers, evergreens, and flowering shrubs, and presenting attractive sites for the erection of villa residences, so much in request in this delightful neighbourhood.

MESSRS. NORTON, HOGGART, & TRIST have received instructions from the executors of the late J. T. Barry, esq. to offer for SALE at the GUILDHALL COFFEE HOUSE, Guildhall, in the City of London, on MONDAY, JULY 4, at ONE o'clock precisely, a very important and valuable PROPERTY, of about ten acres of beautiful freehold building land and meadow, situate at Stroud-green, Hornsey, near Hornsey-rise church, half a mile from the Seven Sisters road Station, on the Great Northern Railway, in close proximity to two proposed stations on the Highgate, Finchley, and Hampstead lines (now in course of construction), two miles from Alexandra park, and within half an hour's ride of the metropolis. It is subdivided and arranged by a system of design of fifteen years' growth, into about twenty plots (each plot containing on average half an acre or thereabouts), many thousand pounds having been expended by the late owner in laying out the best advantage for building purposes, with well-formed roads, 40 feet wide, to which there are frontages of nearly 2,000 feet. The property commands very pleasing views, is surrounded by beautiful specimens of conifers, luxuriant shrubs, and avenues of thriving young timber trees in great luxury, perfectly drained throughout, presents in its entirety a building estate rarely to be met with, and offers at the same time most attractive sites to gentlemen desirous of erecting villa residences for their own occupation. Particulars may be had at the Stapleton-hall Tavern, Stroud-green; at the King's Head, Crouch-end; of SPARLING, Esq., Solicitor, 1, King's-road, Bedford-row; at the Guildhall Coffee-house; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad street, Royal Exchange.

ROCHESTER, KENT.—Valuable Freehold Pleasure Farm, Accommodation and Building Land, Cement Works, Wharf, Cottages, and Gardens

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer FOR SALE, at the GUILDHALL COFFEEHOUSE, near Guildhall, in the City of London, on MONDAY, JULY 4, at ONE o'clock precisely, in six lots, the following valuable FREEHOLD ESTATES, situate in the parish of St. Margaret, Rochester, Kent, viz.:—Lot 1. A valuable Freehold Estate, and the surrounding pictures que country, a portion of the land presenting eligible sites for building; large farmyard, two-bay barn, stabling, and other useful buildings; good garden and orchard, and several inclosures of rich meadow, arable, and hop land, the whole containing 25a. 3r. 10p.; in the occupation of Mr. Pye. Lot 2. A piece of Wood Land, known as Middle-hill, situate in Bridge Chatham parish, containing 3r. 22p. Lot 3. A piece of Wood Land, containing 1r. 30p. Lots 2 and 3 are also occupied by Mr. Pye. Lot 4. A valuable Freehold Property, situate at Borstall, partly bounded by the river Medway, and forming part of the Cockham Hill Farm, comprising engine and boiling houses, mill-house, three kilns and shed, coke-ovens, wash-mill, stable, &c.; a wharf, with considerable frontage to the river; a cottage, together with a chalk-pit and an inclosure of arable land; the whole containing 7a. 0r. 26p., let on lease to Mr. John Hollick, at a very low rental. Lot 5. A valuable Freehold Estate, and forming part of the Cockham Hill Farm, situate at Borstall, near the city of Rochester: comprising a comfortable farmhouse, placed on an elevated site, commanding a fine view of the estate and the surrounding pictures que country, a portion of the land presenting eligible sites for building; large farmyard, two-bay barn, stabling, and other useful buildings; good garden and orchard, and several inclosures of rich meadow, arable, and hop land, the whole containing 25a. 3r. 10p.; in the occupation of Mr. Pye. Lot 2. A piece of Wood Land, known as Middle-hill, situate in Bridge Chatham parish, containing 3r. 22p. Lot 3. A piece of Wood Land, containing 1r. 30p. Lots 2 and 3 are also occupied by Mr. Pye. Lot 4. A valuable Freehold Property, situate at Borstall, partly bounded by the river Medway, and forming part of the Cockham Hill Farm, comprises; comprising engine and boiling houses, mill-house, three kilns and shed, coke-ovens, wash-mill, stable, &c.; a wharf, with considerable frontage to the river; a cottage, together with a chalk-pit and an inclosure of arable land; the whole containing 7a. 0r. 26p., let on lease to Mr. John Hollick, at a very low rental. Lot 5. A valuable Freehold Estate, and forming part of the Cockham Hill Farm, comprising 12a. 3r. 8p.; let on lease to Mr. Mary Tuff and Mr. Thomas Tuff. Lot 6. Several valuable Freehold Inclosures of Marsh Land, forming part of the Cockham Farm, and adjoining lot 5; containing together about 14a. 1r. 39p.; in the occupation of Mr. Pye. Possession of Lots 1, 2, 3, and 6 can be had at Michaelmas next.—May be viewed by permission of the tenants, and particulars had at the Royal Victoria and Crown Hotels, Rochester; of Messrs. WALTERS, YOUNG, and SON, Solicitors, No. 9, New-square, Lincoln's-inn; at the Guildhall Coffeehouse; and, with cards to view, of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange.

LEYTONSTONE, ESSEX. Fifty-five Plots of eligible Freehold Building Land, suitable for good Residences

MR. JOHN M. DEAN will SELL by AUCTION, at the MART, on THURSDAY, JUNE 30, at TWELVE, in fifty-five lots, a FREEHOLD ESTATE, excoriated from land-tax, comprising fifty-five lots of building ground, including a valuable corner plot having the exclusive privilege of being the only tavern plot on the estate, situate at Harrow green, on the high road between Stratford and Leytonstone, within a short distance of Leyton Railway station, having extensive frontages on the Leytonstone high road, the roads leading to Leyton Railway Station, and other good roads adjoining; the land is high and dry, with a gravelly subsoil, and is particularly eligible for the erection of good detached or semi-detached residences.—May be viewed, and particulars and conditions of sale (with plans) had in due course, at the Mart; of Messrs. GLYNES & SON, solicitors, 9, George-yard, Lombard-street, E.C.; and of Mr. JOHN M. DEAN, Auctioneer and Surveyor, The Grove, Stratford, E.

[For remainder of Auctions see p. 462.

72—74, Bishopsgate-street Within.

COMPETITIONS.

TO ARCHITECTS. — The Corporation of East Retford are desirous of being furnished with DESIGNS and ESTIMATES for the ERECTION of a NEW TOWN HALL, with Corn Exchange and Markets in connection therewith. A premium of 50*l* will be given for the Design adopted, such Designs and Estimates to be the property of the Corporation. The whole of the buildings not to exceed 8,000*l*. The Corporation do not bind themselves to employ the architect who may obtain the premium; but if they do, then he shall not be entitled to the premium. A plan of the land and further particulars may be obtained on application to us.

NEWTON & JONES, Solicitors.
Town Clerk's Office East Retford.

TO ARCHITECTS. — WANTED, a DESIGN for SMALL SEMI-DETACHED VILLAS, standing twenty yards back from public road, in plots of ground 66 yards deep, with frontage to the west of 60 yards. Price of the pair, 80*l*. A premium of 20*l*. will be given for the design approved, together with specifications, or otherwise the architect forwarding it will be engaged for the work. The drawings to be addressed to the Rev. H. WYE, Vicarage, Peterborough, on or before JULY 15th, 1864.

CONTRACTS.

NOTICE to CONTRACTORS.—TENDERS are required for PROVIDING and LAYING CAST-IRON OUTLET PIPE from No. 1 Sluice to the Level of Low Water, in the River Medway, at Sheerness. A plan, showing the position and levels of the pipe, &c. may be seen, and a specification, with all necessary information, obtained, on application at the Office, between the hours of TEN and FOUR, Sundays and 28th June excepted, from 20 h to 30th JUNE instant. Tenders will not be received later than 4th JULY next. The Secretary of State for War does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Sheerness, 13th June, 1864.

WAR DEPARTMENT CONTRACTS.— NOTICE to BUILDERS.

TENDERS are required for RENEWING COOKHOUSE, ABLUTION, and BATH ROOMS, at the West Wing of Hounslow Barracks, in the county of Middlesex.

Parties desiring to Tender for the erection of these Works must leave their names at this Office from the 20th to 25th JUNE, 1864, both days inclusive, between the hours of ELEVEN o'clock a.m. and THREE o'clock p.m., and pay the sum of half-a-guinea for the bills of quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, London District,
11, James-street, Buckingham-gate, London, S.W.
June 14, 1864.

NOTICE is hereby given, that TENDERS will be received by the Director of Contracts, War Office, Pall Mall, London, S.W. on or before the 30th JUNE, 1864 for the SUPPLY of the following descriptions of MATERIALS for Artificers' Work, to be delivered into store at Brompton Barracks, from time to time, for a period of Three Years, from the 1st of APRIL, 1864, determinable at any period after one year, on either party giving to the other three months' notice in writing, viz.:—

Bricklayers' Materials.	Painters' Materials.
Carpenters' do.	Plasterers' do.
Masons' do.	Plumbers' do.
Painters', Glaziers', and Paperhangers' do.	Slaters' do.
	Smiths' do.

The probable quantities of Materials required for the present year are:—

1,000 feet cube of Fir, in balk.
1,700 feet super (in total) of 3 inch Deal, Ash, Beech, Elm, and Oak.
460 lb. of Nails.
1 cwt. of Glue.
28 cwt. of Tarred Rope.
27 cwt. of Iron.

The Secretary of State reserves to himself the right of rejecting any or all Tenders that may be presented.

Further information and printed forms of Tender may be obtained, and schedules of Contract may be seen, on application at the Royal Engineer Establishment, Brompton Barracks, from the 18th JUNE to the 29th JUNE, and no Tender can be admitted after the said 30th JUNE, 1864.

Royal Engineer Establishment, Chatham, June 14th, 1864.

BOROUGH of BURNLEY. — To CONTRACTORS, MASONS, and OTHERS.—LEE GREEN COMPENSATION RESERVOIR.—TO BE LET by TENDER, the EXCAVATING, EMBANKING, PUDDLING, MASONS' WORK, ROAD MAKING, &c. required in the Construction of a COMPENSATION RESERVOIR, intended to be made at Lee Green, in the township of Briercliffe-with-Extwistle and Worsthorne-with-Hurstwood in the county of Lancaster. Plans and specifications may be seen, and other information obtained, by applying at the office of Mr. JAMES EMMETT, Waterworks Manager, 3, Carlisle street Burnley. Sealed Tenders, indorsed "Tender for Lee Green Reservoir," addressed to the Chairman of the Water Committee, must be delivered at the Manager's Office not later than MONDAY, the 25th instant. The lowest or any Tender will not necessarily be accepted. By order

Burnley, 2nd June, 1864. A. B. CREEKE, Town Clerk.

TO STONE MERCHANTS.—The Hastings Local Board of Health are ready to receive TENDERS for the purchase of about 12,000 feet, superficial, of the best Tooled Hard YORK PAVING, to be delivered into carts over the side of the vessel, at the Fish Market, or Priory. Hastings, as the Surveyor may direct, free of all freightage or charges whatever; the carts to be provided by the Local Board; and the Board will not take any responsibility until the stone is delivered, sound and in good condition, into the carts. The contractor to state a price per foot, superficial, for 3 inch, strong 2½ inch, and 2 inch. Also for 4-inch Tooled York Landings and 6 inch steps. 12 inches by 6 inches, tooled on the top and one edge. The first cargo to be delivered within three weeks from the date of signing the contract, and the second within two months from the same date and the third within four months. The greater portion can be delivered before the winter, and the whole before the 1st day of MAY, 1865, or at any time within one month from the date of receiving a written order from the Surveyor. The Local Board shall have full power to order either more or less than the quantity named at the price per foot named by the contractor. Payments will be made as follows: 75 per cent. will be paid within two months from the date of the delivery of each cargo, on receiving the certificate of the Surveyor; and the remainder within two months after the completion of the contract. The Local Board do not bind themselves to accept the lowest or any tender. Tenders to be delivered at my Office, No. 84, High-street, Hastings, on or before DEVONSHIRE on the 27th of JUNE instant.

ROBERT GHOUSE, Town Clerk.

TO WELL-DIGGERS, and OTHERS. — Parties willing to CONTRACT for DIGGING a WELL, 8 feet in diameter, and about 100 feet in depth, at Hoshan, Surrey, are requested to send in their Tenders on or before the 27th JULY to Mr. PRICE, Bookseller, West-street, Horsham, where particulars and specifications may be seen, on and after JUNE 27th.

BLACKFRIARS BRIDGE. — TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and in steps, Roach, Portland, and rough rubble. Also for the handsome columns, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

CONTRACTS.

WEAR NAVIGATION and SUNDERLAND DOCK ACTS—HENDON DOCK WORKS—DOCK GATES, SWING BRIDGE, and other IRON WORK. — The River Wear Commissioners are prepared to receive TENDERS for the CONSTRUCTION, ERECTION and COMPLETION of the DOCK GATES, SWING BRIDGE, and other IRON WORK of the Junction Entrance of the intended new dock at the South Docks, Sunderland, in conformity with drawings, specifications and conditions, which may be seen, and further particulars obtained, upon application to THOMAS MEIK, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, after JUNE 11th, 1864. Tenders, on printed form, which only will be received, and enclosed under printed covers, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," to be delivered at 13, Fawcett-street, Sunderland, not later than NOON on the 28th JUNE, 1864. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

J. S. ROBINSON, Clerk to the Commissioners.

Sunderland, June 1st, 1864.

TO BUILDERS, CONTRACTORS, and OTHERS.—EXTENSION of TIME for RECEIVING TENDERS. The Directors of the West Worthing Investment Company (Limited), are desirous of receiving TENDERS for the ERECTION of a TERRACE, consisting of twenty first-class Residences, upon the Company's premises at West Worthing, in the county of Sussex.—Plans, sections and specifications, may be seen at the Office of the Architect, G. A. DEAN, Esq. 1, Lancaster-place, Strand, London, W.C. and after WEDNESDAY, the 15th instant. Quantities will be ready to be furnished on the 30th instant. Tenders, addressed to the Secretary, and endorsed "Tender for Terrace," to be delivered at the Company's Offices, at or before ONE o'clock, on TUESDAY, the 26th JULY next. Security will be required for the due performance of the Contract; and the Directors do not pledge themselves to accept the lowest or any Tender.

By order.

Offices, 27, Great George street, Westminster, S.W.
June 15, 1864.

WEST HAM LOCAL BOARD of HEALTH.—The Local Board of Health for the District of West Ham, in the County of Essex, are prepared to receive TENDERS for MAKING a SEWER, in Forty Acre-lane, Barking-road, West Ham, within the district, according to plans, sections, specifications, and conditions prepared by Mr. MARSHALL, the Surveyor of the Board; and which may be seen at his Office, at the Kelly House, in Stratford, where also forms of Tender may be obtained, together with any further information required. Tenders, endorsed "Tender for Sewer," are to be sent to me, on or before MONDAY, the 27th instant.—By order of the Board,

CHAS. WILSON, Clerk.

Rokeby House, Stratford, June 13, 1864.

TO BUILDERS. — Persons desirous of submitting TENDERS for the ERECTION of a RESIDENCE and STABLING, at Sudbrooke, in the county of Lincoln, can see the drawings and specification, at 139 Office, and copies of the same, at Mr. HARVEY'S, Printer and Stationer, Bank-street, Sleaford.—Tenders to be sent to me on or before the 15th of JULY, for the lowest or any Tender not necessarily accepted.

CHARLES F. CRAPP, Architect.

70, Camberwell New-road, S.

BOROUGH of STOCKPORT.—The Corporation of this Borough (the Local Board) is desirous of receiving TENDERS for forming 3,000 lineal feet of 9 inch by 24 inch WELSH SETTS, to be delivered at the Canal Wharf, Lancashire Hub, Heaton Norris, or either of the railway stations in the borough, in quantities of not less than 250 tons per week. Samples to be sent with the Tenders. Tenders to be addressed to me, marked "Tender for Welsh Setts," and to be delivered at my Office not later than the 5th day of JULY next.—By order,

HENRY COPPOCK, Clerk to the Local Board.

Stockport, June 20, 1864.

ROADS and SEWERS. — To Persons willing to CONTRACT for the FORMATION of ROADS and SEWERS upon an Estate at Clapton, may see the drawings and specification at the Offices of Messrs. HAMMACK & LAMBERT, 59, Bishopsgate-street, City, E.C.—Tenders to be delivered on WEDNESDAY, the 6th JULY.

SCINDE RAILWAY COMPANY.— CONTRACT for TURNTABLES.—The Directors are prepared to receive TENDERS for THREE ENGINES and TWELVE CARRIAGE TURNTABLES. Drawings can be seen and specifications may be obtained on application at the Company's Offices, on payment of one guinea and a half, which will be returned on a bond fide Tender being given in. Tenders in sealed covers, addressed to the Directors, and endorsed "Tender for Turntables," are to be issued with the undersigned before TWELVE o'clock on WEDNESDAY, the 13th JULY. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

SIDNEY H. R. PARRY, Acting Secretary.

Scinde Railway Company's Offices,
Gresham House, Old Broad street, 23rd June, 1864.

TO BUILDERS. — Persons desirous of TENDERING for the ERECTION of OFFICES, &c. at Burton-on-Trent, for Messrs. Jodd, Co-pe, & Co. may inspect the drawings and quantities at my Offices, 2, Bank-buildings, Lothbury, on MONDAY, the 27 inst. The estimates to be delivered and Tenders for TENDERS on SATURDAY, 2nd JULY next. The lowest estimate will not be necessarily accepted.

JAMES PAIN and Lofthill, Architects.

PERSONS desirous of TENDERING for the ERECTION of a DETACHED VILLA, Coach-house, Stabling, &c. near Sanderstead Hill, Kent, for G. Hanbury, Esq. may see the drawings, &c. at the Offices of Messrs. W. GOSLING & SON, Architects, 52, Wellington-street, Waterloo, Strand. Mr. Hanbury does not pledge himself to accept the lowest or any Tender.—Tenders to be sent in on WEDNESDAY, 6th JULY. Copies of quantities will be supplied.

[For remainder of Contracts see next Page.

CONTRACTS.

THE VESTRY of the PARISH of LAMBETH.—TO SEWER CONTRACTORS.—The Committee for Sewers & Lamps have ordered that they are prepared to receive TENDERS from competent persons for CONSTRUCTING about five lineal miles of BRICK SEWERS, together with other WORKS in connection with the same, in Norwood new road, Upper and Lower Tulse Hill, Brixton Hill, Bedford road and Clapham road. Plans, specifications, and forms of Tender may be seen, and copies of the latter obtained, at the Vestry Hall, Kennington Green, on and after MONDAY, the 27th instant, between the hours of TEN a.m. and FOUR p.m., Sealed Tenders, addressed to the Clerk of the Vestry, and endorsed "Tender for Sewer Works," are to be delivered at the Vestry Hall not later than FOUR o'clock in the afternoon of MONDAY, the 11th of JULY, and no Tender will be received after that hour. Each Tender is to be accompanied by a letter, addressed to me, at the Vestry Hall, Kennington Green, and to be delivered at the same time as the Tender, stating the names of two sufficient householders, who will be ready to enter into and execute with the party whose Tender shall be accepted a bond in the penalty of £500, with two sureties for the proper performance of the work.—By order,

THOS. BOFFIN, Clerk to the Vestry.

Vestry Hall, Kennington Green, June 21, 1864.

STOCKPORT. — NEW BRIDGE. — TENDERS are required for the ERECTION of a New BRIDGE over the River Mersey, at Stockport, on the Estate of C. Howard, Esq. The Bridge will consist of brick arches, of one span of 57 feet—The drawings and specification may be seen, and forms of Tender and all requisite information obtained, until the 30th JUNE inst. on application to Mr. BRIERLEY, Civil Engineer, Blackburn, and, after that date, on application to Mr. MORLEY, Solicitor, and George Hovell, Stockport. Sealed Tenders, addressed to the undersigned, at Blackburn, and delivered on or before WEDNESDAY, the 6th of JULY next.

JOSEPH BRIERLEY, Engineer, &c.&c.

Blackburn, 23rd June, 1864.

SAINT MARY, ISLINGTON.—The Highways Committee will meet at the Vestry Offices, Upper-street, Islington, on TUESDAY next, the 28th day of JUNE, at TEN o'clock in the forenoon, to receive TENDERS for the REMOVAL of the ROAD SWEEPINGS from some of the roads in the parish—as now under the management of the Metropolis Roads Commissioners. Any of the Surveyors of Watercarts, Heroes, Men, and all other necessaries for Watering the said Roads, or parts thereof. For the above purposes the roads are divided into districts, particulars of which may be obtained at the Vestry Offices. Forms of Tender, which alone will be received, may be had at the Vestry Offices, between the hours of TEN and FOUR o'clock, previous to which Tenders must be sealed and delivered. No Tender will be received after TEN o'clock, on which no Tender will be received unless it be in a sealed cover, addressed to the Chairman of the Committee, and endorsed "Tender for Sweeping Roads." Tenders not accepted will be returned to those persons whose Tenders are not accepted, but will be retained in the other cases until the contracts are executed, and in default of the contract being duly executed, the same deposit shall be forfeited to the Vestry. The Committee do not hold themselves bound to accept any Tender.

Vestry Offices, Upper-street, JOHN LAYTON, Vestry Clerk.

29th June, 1864.

THE NATIONAL EISTEDDFOD, 1864.—TENDERS for the ERECTION of a PAVILION at LLANDUDNO.—To BUILDERS and CONTRACTORS.—Persons willing to TENDER for the ERECTION of a PAVILION to seat 6,000, with Platform, Orchestra, &c. at Llandudno, may inspect the drawings and specification, and obtain all further information, at the offices of Mr. GEORGE HILTON, Architect, Llandudno, on and after WEDNESDAY, the 22nd instant. Tenders, sealed, must be sent to the undersigned, for the performance of the contract, to be sent in by SATURDAY, the 2nd day of JULY, to Mr. WILLIAMS (Corn Bridge, Secretary, Llandudno. The Committee of the National Eisteddfod do not hold themselves to accept the lowest or any Tender.

Llandudno, June 16th, 1864.

STONE CARVING. TENDERS are required for FINISHING the CARVING inside the Church of St. Andrew, Acadia, Upper, Westmoreland. They must include the expenses of scaffolding, carpentering, the safety of the work, and the fees. They must also state the time they will be required to finish the work. The carving is to be done in the stone yard of Messrs. Stone Newington Wors, to commence the same week in AUGUST. No Tender will be received later than the 1st of JULY. A specification can be had on application or drawing one between the Rev. H. WALKER, 2, Shaftesbury-crescent, Lowman, S.W.

TO BUILDERS and CONTRACTORS.—The Joint Burial Boards of the Parishes of St. Pancras and St. Mary, Islington, will meet on THURSDAY, the 30th inst. at FOUR o'clock in the afternoon, to receive TENDERS for the ENLARGEMENT of the NONCONFORMIST CHAPEL at Pardon Chapel, at the Cemetery, Finchley-road, St. John's Wood, and for the making of the Roads, Paths, &c. in the Cemetery, at the Vestry Hall, St. Pancras, on or before FIVE o'clock, of the said day.—The Boards do not bind themselves to accept the lowest tender.

CHAS. GREENE, } Clerks to the respective Boards.
JAMES TAYLOR, }

TO BUILDERS.—The Committee for carrying out the SEAMEN'S ROOMS and OBSERVATORY at Margate, are prepared to receive TENDERS for the ERECTION of the same, from which they will select one. Plans and specifications may be seen at the Office of the Secretary, Mr. W. H. VALLER, Broadstairs, Margate. Tenders must be delivered on or before WEDNESDAY, 6th of JULY next, by TWELVE o'clock at noon. The Committee do not pledge themselves to accept the lowest tender.

TO BUILDERS. — TENDERS will be received for RESTORING the TOWER and REBUILDING the SPIRE of Wood Eaton Church, Oxfordshire. Drawings may be seen at the Vestry Hall, and at Boarhunt the Vicarage, and at the Office of the Architect, in Hall JULY. The Committee do not bind themselves to accept the lowest or any Tender.

BOROUGH of SOUTHAMPTON. — To IRONFOUNDERS and OTHERS.—Notice is hereby given, that the Local Board of Health for the Borough of Southampton will receive TENDERS for the supply of CAST IRON PIPES, SPECIALS, and VALVES required for the Extension of the Waterworks, and for the Construction of New Sewers in the Parish of Millbrook, Hampshire, and for the Supply of Cast Iron Pipes required for the Extension of the Waterworks in the Parish of Millbrook, Hampshire, consisting about 1,000 yards, for a portion of the Pipes required for the Sewers, and about 1,000 yards for the Pipes required for the Waterworks. Specifications may be obtained on application to the Surveyor to the Local Board of Health, Southampton, on and after Wednesday, 22nd June, 1864, and Tenders, addressed to the Chairman of the Local Board of Health, Southampton, and endorsed "Tenders for Pipes," must be delivered at the Office of the Surveyor, No. 20, Portland-terrace, Southampton, on or before Wednesday, 6th July, 1864, at Twelve o'clock at noon. The Board do not pledge themselves to accept the lowest or any other Tender.—By order,

CHARLES B. BEACHAM, Clerk.

Local Board of Health, Southampton, June 22, 1864.

LANCASHIRE and YORKSHIRE RAILWAY.—The Directors are prepared to receive TENDERS for the CONSTRUCTION of a BRANCH RAILWAY from Antrim to the [illegible] Liverpool, [illegible] Rivington, [illegible] Bolton, and forms of Tender obtained, at the Engineer's Office, Hunt's Bank, Manchester, on and after FRIDAY, the 24 h of JUNE inst.; [illegible] Tenders, addressed to the undersigned, at Manchester, and delivered [illegible] on or before TUESDAY, the 5th day of JULY next.

WM. JAS. LAWN, Secretary.

Manchester, 18th June, 1864.

LANCASHIRE and YORKSHIRE RAILWAY.—The Directors are prepared to receive TENDERS for the BUILDING of a CENTRAL STATION, [illegible] Liverpool, with Engine Houses, Workshops, Goods Warehouses, Offices, and other Buildings, and for the Construction of Roads, Bridges, and Approaches thereto. Plans may be seen, and forms of Tender obtained, at the Engineer's Office, Hunt's Bank, Manchester, and at the Company's Station, Liverpool. Tenders, addressed to the Secretary, and delivered at the Engineer's Office, Manchester, on or before the 2nd JULY next.

WM. JAS. LAWN, Secretary.

Manchester, 18th June, 1864.

SEVENOAKS, KENT.—EXTENSION of TIME.—In consequence of some Alterations to Plans of Proposed NEW FARMSTEAD, the TIME for delivering the TENDERS is DELAYED. The drawings will be at Messrs. Court Farm on and after the 1st instant, till the 14th JULY next, on which day the Tenders are to be delivered to W. J. TONGE, Esq. Oxford House, near Sevenoaks, who does not bind himself to accept the lowest or any Tender. Copies of quantities may be had on application to WILLIAM SHEARBURN, Architect, Dorking.—N.B. The drawings for the New Residence will be ready in a few weeks.

TO PAVIORS and OTHERS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City, on TUESDAY, the 28th of JUNE, 1864, at HALF PAST TWELVE o'clock precisely, to receive TENDERS for REPAVING the CARRIAGE-WAY of a portion of Watling-street, and RELAYING the CARRIAGE WAY PAVEMENT of portions of King William-street and Cornhill, agreeably to specifications which may be seen at this Office. Persons tendering are required to give the names and addresses of at least two substantial householders as their sureties, in order to bond with. Each contractor for the whole or either of the contracts. The Commissioners do not pledge themselves to accept the lowest Tender, or any, unless deemed satisfactory; and no Tender will be received after TWELVE o'clock on the day of treaty.

JOSEPH DAW, Principal Clerk.

Sewers Office, Guildhall, June 17, 1864.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses and coachhouses for four carriages; suitable servants' offices; extensive ornamental grounds, with gardener's houses, in all 28 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

BUILDING LAND at CHITT'S HILL, WOOD GREEN, overlooking three different counties, and fronting the high road; eight minutes walk from the station and Alexandra Park. To BE LET for Thirty-one or Ninety-nine years, in lots which are in great demand in this beautiful locality. Term, 80 years. Money advanced if required. A plan may be seen, and particulars obtained, on application to S. REYNOLDS, Architect and Surveyor, 101, Great Russell street, Bloomsbury, W.C.

BUILDING LAND.—TO BE LET, on the Grand Junction Canal, LAND for BUILDING, bounded on one side by the Great Western Railway and on the other by the Grand Junction Canal. The Canal abuts into the Estate. It is situated at Southall, in Middlesex, and is well adapted for Wharfs, Manufactories, Cottages, and the like. Entrance may be to the Southall Brick Company (Limited), 3, Adelaide place, London Bridge.

LEWISHAM, KENT, near the Junction Railway, and on the Main and North Kent Lines. TO BE LET, TWO PLOTS of GROUND, each for a Pair of Small Villas. Also, a Plot for Three Pairs. Commencement 30 per House.—Apply to THOMAS MILLS & SON, Builders and Agents, 28, York-street, Westminster, S.W. Lessee of sewer, direct from fresh water. No arrears.

HERTFORD, next the Corn Exchange.—TO BE LET, TWO COMMODIOUS SHOPS with Houses and Premises, situate and numbered 7 and 8, Corn-factor's business. For particulars, apply to Mr. SAMUEL ANDREWS, Castle-street, Hertford.

WEARDE STONE QUARRIES, LIMITED. The store road leading from these Quarries has been granted to the Directors for a way to the main road, and can be had for Pitching in any quantity for Housekeeping Samples sent, with prices, on application to the Manager, E. M. CROGER, Gunnislake, Cornwall.

PATENT CONCRETE STONE COMPANY (Limited).—The Directors have granted LICENCES for six of the Counties of Great Britain, and are prepared to enter into further Agreements for LICENCES for the MANUFACTURE of this valuable MATERIAL.—Patent for the erection of Works, and full instructions, on application. By order,

THOMAS PIPER, Secretary.

36, Parliament-street, S.W. May 1864

FOREST HILL. BUILDING LAND TO LET on this hill, commanding extensive views. — Apply to A. B. 129 Bermondsey-street, S.E.

FREEHOLD LAND TO BE SOLD, or LET on Building Leases (about three acres), at Selhurst road, Norwood Junction; Two Acres at Forest-hill, near the station; and also Half an Acre at Wellington-road, Upper Holloway.—Apply to Messrs. M. & T. GARNAR, No. 8, King-street, Bermondsey New-road, S.E.

TO BUILDERS and OTHERS.—TO BE LET, on repairing lease, EIGHTEEN FREEHOLD HOUSES, with the Premises in front in a wide open street, between the Great Western Railway Goods station and the Edmund green-road.—For further particulars, apply to Mr. JOHN COLLIER, Architect and Surveyor, 26, Philpot-lane, Fenchurch-street.

BRICKFIELD WANTED, in working order, near London, or within 20 miles of same, making from 5 to 7 millions annually.—Address, with full particulars, to Mr. PALMER, 2, Cowley-street, Cowley-square, N.W.

BILLITER-STREET. — TO BE LET by TENDER, on Building Lease direct from the Freeholder, for a term of 80 years, the Premises No. 6, Billiter-street, having a frontage of about 20 feet 6 inches, and a depth of about 56 feet 9 inches. Plans to be seen at the Surveyor's Office, HERON, on TUESDAY, the 26th JULY, at TWELVE o'clock precisely, at the Offices of Messrs. W. HORSLEY & SON, Solicitors, Tokenhouse-yard, where a plan of the site and conditions of sale may be seen. The Freeholder does not bind himself to accept the highest or any Tender.

BUILDING LAND (overlooking Bushy Park, Hampton Court), extensive views, gravel soil, good drainage, within twenty minutes' walk of the Station, Teddington. The most healthy and desirable locality in the City. Leases may be had. Plots sold if desired. Apply to Mr. WALKER, Surveyor, Hampton Wick; Mr WILLIS, 48, Kensington Gardens-square.

TO BUILDERS and OTHERS. LAND TO BE LET, on BUILDING LEASE, at Bromley, Kent, for Cottages, Villas, or Shops, with Stabling, &c. Apply to Mr. MILLARD, Builder, Bromley, or Hanover & Wyatt, 10, Upper Thames-street, E.C.

VALUABLE FREEHOLDS in LOTHBURY, in the City of London, fronting to the Bank of England, and adjoining the Mansion-house. Valuable Frontage to the wide and important thoroughfare of Moorgate-street, and Extensive Premises fronting to Coleman-street, Basinghall-street, and Lothbury, which will be Sold by PUBLIC AUCTION, by Messrs. DEBENHAM, TEWSON, FARMER, & BRIDGEWATER, at the Mart, on TUESDAY, the 26th day of JULY next, at TWELVE for ONE precisely, unless previously disposed of by Private Contract, of which due notice will be given. Particulars and plans of the property, together with conditions of sale, may be had of Messrs. HENRY & LINCOLN, VALIANT, Solicitors, 12, Tokenhouse-yard, Lothbury, E.C.; and at the Offices of the Auctioneers, 8, Copthall-buildings, E.C. No lot will be sold under a limited reserve.

The Premises will be open to inspection on TUESDAY, the 19th inst. The Tenders will be opened at ONE o'clock on the same day.

FREEHOLD BUILDING LAND TO BE SOLD, or LET on long Leases, about 14 acres, situate in a very eligible situation, with good view of surrounding country, at Romford, seven minutes' walk from the railway station, at the east end of Victoria-road. It has a south frontage of 200 feet, by a depth of 800 feet. Good roads and drainage, and is fenced in.—Apply to Mr. J. ASHMOLE, Ilford

WANTED, BUILDER'S PREMISES, within Two Miles of the Bank. Water sole preferred. Address full particulars, R. F. S. Saunders, Bros. Stationers, London wall, City.

DARTFORD, KENT.—FOR SALE, valuable FREEHOLD BUILDING LAND, in plots of 50 feet frontage and upwards, at Dartford New Town, about half a mile from the Railway Station.—For particulars, apply to A. RUSSELL, Esq. Solicitor, Dartford; or to Messrs. COBB, Surveyors and Land Agents, 26, Lincoln's-inn-fields.

TO SPECULATORS and OTHERS.—TO BE SOLD, two pairs of ten-roomed carcases with side entrances. Freehold. Sydney Terrace, Sydney Place, Sydney Street, Sydney Walk, Sydney Buildings, Sydney Mews, Sydney Gardens, Sydney Square, Sydney Cottages, Sydney Villas, Sydney Parade, Sydney Crescent, Sydney Row, Sydney Grove

MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES. MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for adoption; only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE PRIZE MEDALS

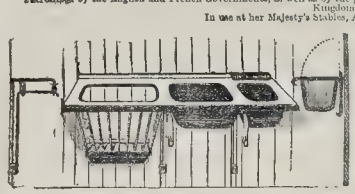
(LONDON, 1851. PARIS, 1855. LONDON, 1862)

Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.

For progressive and general improvements in



STABLE FITTINGS AND HARNESS BRACKETS.

Awarded a prize at the Paris Exhibition,

Patronized by the English and French Governments, as well as by the principal Nobility, Gentry, and Hunting Establishments in the Kingdom.

In use at her Majesty's Stables, Aldershott and Balmoral.

COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Water-trough, and Wrought iron Rack, united to an iron top-plate, and forming one complete and useful fixture, having COTTAM'S Patent Noiseless Halter Guide and Corn or Bran attached, which is taken to the back of the manger, and works with ease and freedom up or down the guide bar.

COTTAM'S NEW PATENT SEED BOX, an important addition to the above fittings, being simple in construction, light, and durable, perfect in its use, and economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant; while its cleanness, simplicity, and utility in keeping the contents of the troughs clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

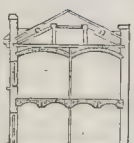
can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE GUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled, iron gates, feeding, hurdles, &c.



Illustrated Catalogues and Estimates gratis, upon application to

COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, Esq., for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens London."

CLAYTON, SHUTTLEWORTH, & CO. ENGINEERS,

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

Beg to intimate that they are prepared to undertake the **Heating and Ventilating of Public and Private Buildings, Hot Houses, &c.**—Ventilating Ships,—Tunnels,—Sewers, &c. Fitting up with Stoves, Cooking and Hot-water Apparatus, Baths, &c.

Curing Smoky Chimneys and Flues,—Consuming Smoke in Furnaces,—Altering DEFECTIVE WORK (as has been Mr. BATTY'S practice for Fifteen Years).

They invite attention to their NEW STOCK OF STOVES—CLOSE AND OPEN FIRE-COOKING RANGES—HOT WATER AND RAIN WATER PIPES—STABLE AND GARDEN FURNISHINGS—RAILINGS, &c. and especially to the following **PATENTED IMPROVEMENTS**, viz.:—

THE VENTILATING FIRE GRATE, which acts by admitting into the room fresh air moderately warmed in a chamber at the back, and removing the vitiated air. Grates of all qualities can be constructed on this principle. —(*Favourably mentioned at the Meeting, 2nd March, 1863, of the Royal Institute of British Architects, and printed in the Annual Paper.*) PRICE, from 6d. per inch; BRIGHT, 4l. and upwards.

A NEW COOKING RANGE—dispensing with the Close Fire Door, besides having the following advantages:—

1. A strong Roasting Fire, capable of Roasting two or three joints at a time. Superior Ovens for roasting or baking at pleasure.
2. More perfect combustion,—preventing accumulation of soot,—economising fuel. Also removing the smell of cooking from the kitchen.

PRICE, 36 in. to 30 in. 3l. to 4l. 10s.; 42 in. to 45 in. 4l. to 6l.; 48 in. to 54 in. 5l. to 8l. 10s.; 60 in. to 72 in. 7l. to 16l.; and upwards.

THE POOR MAN'S COOKING GRATE, having a roasting Fire—a roasting Oven—a Boiler and Flue attached, for increasing the heat of the Oven, Boiler, and Hob-plate, as required. By these means a smaller amount of fuel will give results superior to any other Cooking Stove now in use. PRICE, 30 in. to 42 in. 32s. to 48s.: 26 in. without Boiler, 24s.

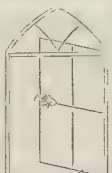
THE WARM AIR PAGODA OR RADIATING STOVE, having the *currents directed outwards*, so that immediately over the Apparatus the air is comparatively cool, while at a distance it is warmer than by any other construction of Stove, thereby being capable of equalizing in a superior manner the temperature of *Churches, Halls, Shops, &c.*

A SELF-ACTING VENTILATOR FOR ROOMS—placed between the joists and ceiling—removing the vitiated air. PRICE, 8s. 6d. to 12s.

THE PYRAMID CHIMNEY HEAD, preventing Chimneys from smoking, and down-draughts. PRICE, 12s. 6d. to 20s.

N.B. BATTY & STEVENS will be happy to give information on the Ventilation of Buildings, and the Repairing and Improving of Heating and Cooking Apparatus.

BURT & POTTS'



PATENT WROUGHT IRON WATER-TIGHT WINDOW AND FRAME,

SUITABLE FOR CHURCHES, CHAPELS, PARSONAGE HOUSES, SCHOOLS, PUBLIC BUILDINGS, OR PRIVATE HOUSES.

THEY CAN BE MADE TO ANY DESIGN.

FULL PARTICULARS AND PRICES ON APPLICATION.

38 and 65, YORK STREET, WESTMINSTER.

COX & SON, CHURCH FURNITURE MANUFACTURERS,

28 and 29, SOUTHAMPTON-STREET, STRAND.

PAINTED and STAINED GLASS WORKS, 41 and 44 Maiden lane (61, 62, 63, Southampton-street, WC.

WOOD and STONE CARVING &c., GOTHIC METAL WORKS, Belvidere-road, Lambeth, S.W.

CARVING—A great reduction effected with the assistance of the Patented Machinery.

GOTHIC METAL WORK, of every description, both in Silver, Brass, and Iron.

PAINTED GLASS. Designs and Estimates furnished for Stained Windows; also Quarry and Geometric Patterns.

THE WHOLE OF THE WORK DONE ON THE PREMISES.

COX & SON'S New Illustrated Catalogue, May, 1864, with 350 Wood Blocks of Church Furniture, Painted Glass, and Decoration, forwarded for six stamps.—Show-rooms, 28 and 29, Southampton-street, Strand.

GALVANIZED IRON AND ZINC WORKS.

GALVANIZED OR BLACK SHEET-IRON, CORRUGATED AND PLAIN, ALWAYS ON STOCK.
GAS AND WATER TUBING, GUTTERING AND PIPING, WIRE NETTING, TELEGRAPH AND FENCING WIRE.
EVERY DESCRIPTION OF IRON WORK GALVANIZED.
ESTIMATES GIVEN FOR IRON ROOFS, SHEDS, STORES, &c.

VAVASSEUR & CO.

GALVANIZED IRON AND ZINC WORKS, SUMNER STREET, SOUTHWARK, S.E.

MANTEL PIECES, ENGLISH AND FOREIGN,

IN EVERY VARIETY OF DESIGN AND COST,

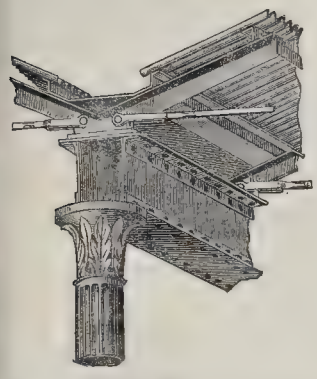
Have been added to their LARGE and EXCELLENT ASSORTMENT of FINE FINISHED STOVES FENDERS, &c. in the NEW SHOW ROOMS of the

GENERAL IRON FOUNDRY COMPANY (LIMITED),

At No. 43, UPPER THAMES STREET, LONDON.

By an arrangement with Mr. WILLIAM POTTS, of Birmingham, the Company have the exclusive Right of Sale of his ART MANTELS in the London District. These Works are of the HIGHEST EXCELLENCE in DESIGN and FINISH, very beautiful, and durable. They also beg to call special attention to the beautiful and varied productions in ART BRONZES and METAL WORK, adapted for ARCHITECTURAL and CABINET DECORATION, MURAL MONUMENTS, &c. now on view in their Rooms. Also to the following Articles of their Manufacture, viz.

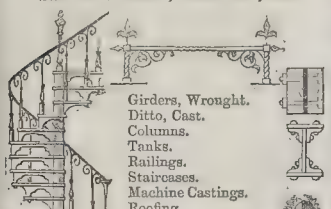
PATENT WROUGHT IRON WINDOWS,



Strong, light, durable, easily fixed, cheap, and free from risk of breakage.

BILLING'S PATENT CHIMNEY THROATS AND AIR APPARATUS.

Most effective for the Cure of Smoky Chimneys.



FIRST-CLASS COOKING APPARATUS

For Club Houses, Hotels, Restaurants, &c.

THE
TIVIDALE COMPANY
(LIMITED),
(Late JOHN H. PORTER & CO.)
7, ST. MILDRED'S-COURT,
POULTRY, LONDON, E.C.
MANUFACTURERS OF
IRON BRIDGES, ROOFS,
AND
BUILDINGS;
IRONFOUNDERS, SMITHS, AND
BOILER MAKERS;
BUILDERS OF

CAST STEEL BELLS.

One-third THE PRICE OF BRONZE.

PEALS CAST TO ORDER.

NAYLOR, VICKERS, & CO.
SHEFFIELD.

FIRE-PROOF CONSTRUCTION.—
FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of plates of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

CANNON IRON FOUNDRY,
156, GOSWELL ROAD, LONDON, E.C.
JONES & BLAXTON,

Having made great ADDITIONS to their STOCK of PATTERNS, beg to inform the trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Palisading, Window Guards Verandahs, Staircases, Tomb Railings, Lamp Posts, Gas Pillars, Cante levers, Sashes, Frames, Balusters, Newels, Wheels, Gratings, and Castings of every description.
STOVES, RANGES, RAIN-WATER GOODS, SASH WEIGHTS, AND FURNACE WORK, &c. &c.

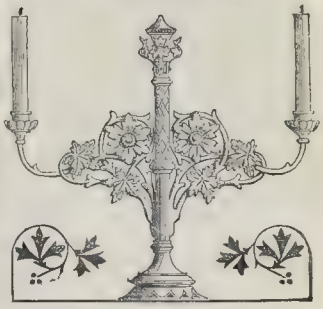
CAUTION to ARCHITECTS and
BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS;
SMITH'S PATENT WEATHER-TIGHT WATER BAR; and
SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS;

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes street, Leicester-square, London; and SUCH ONLY are WARRANTED

SAVING IN GAS.
D. HULETT, INVENTOR and PATENTEE. The Mercurial Gas Regulator is the only efficient instrument for insuring wholesome and uniform lighting, equalizing the pressure, and preventing any irregularity in the height of the flame.
D. HULETT & CO. 55, High Holborn, London,
Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

ROBERT MACLAREN & CO.
EGLINTON FOUNDRY, GLASGOW.
Manufacturers of all sizes of CAST-IRON MAIN PIPES, for Gas or Water, by an IMPROVED PATENT.
GENERAL IRON FOUNDERS, GAS ENGINEERS, and WROUGHT IRON TUBE MAKERS.

HART & SON



METAL WORKERS
And ENGRAVERS of MEMORIAL BRASSES.

ALTAR, BOUNDARY, and TOMB RAILINGS;
GATES, HINGES, and DOOR FURNITURE;
GABLE TERMINALS and VANES;
BELL PULLS;
GASELIERS, CORONÆ, BRACKETS, and STANDARDS, For Gas, Oil, and Candles.
LECTERNS, BOOK DESKS;
FONT COVERS and GUARDS;

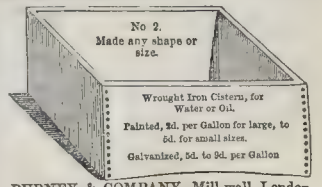
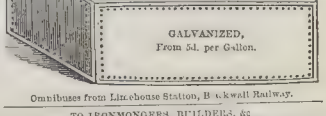
ALTAR CHAIRS;
COFFIN FURNITURE, &c. &c.

ILLUSTRATED CATALOGUES and ESTIMATES FURNISHED.



53 to 58, WYCH STREET, STRAND, W.C.
Show-Rooms also, 20, COCKSPUR STREET, Pall-mall, London, S.W.

JOHNSTON, BROTHERS,
MEDIÆVAL METAL WORKERS AND GASFITTERS.



Manufactory, 190, High Holborn, London.
Drawings and Estimates furnished.

WROUGHT-IRON TANKS, CISTERNS,
GIRDERS, FUNNELS, &c. plain or galvanised; CATTLE TROUGHS, IRON CART BODIES, &c.

BURNEY & COMPANY, Mill-wall, London.
Steam-boats from London Bridge call near the Factory.

JOHN BELLAMY,
BYNG STREET, MILLWALL, E.
WROUGHT IRON TANKS AND CISTERNS,
FOR WATER, OIL, AND TURPENTINE.
CATTLE TROUGHS, GIRDERS, CART BODIES, &c.

Omnibuses from Limehouse Station, Blackwall Railway.

TO IRONMONGERS, BUILDERS, &c.
PATENT WROUGHT-IRON WELDED
TUBE for GAS; Galvanized ditto, for Water; High-pressure Cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators.
HULETT & CO. 55, High Holborn.

IRON ROOFING of CORRUGATED IRON,
Wrought Iron, principal Rafters covered with Slating, Iron Bridges, Girders and Railings; and Portable Buildings for Dwellings, Farm Purposes, Churches, Chapels, Schools, Theatres, Concert or Dancing Rooms, &c. suitable to all Climates, fixed complete in Town or country, or packed for exportation.
For Designs and Estimates apply to
RANDAL STAP, Contractor,
No. 32, KING WILLIAM STREET, E.C.
Where numerous Drawings and Photographs may be seen.
N.B. The Iron Buildings manufactured by R. STAP are not fixtures on Leasehold Property.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

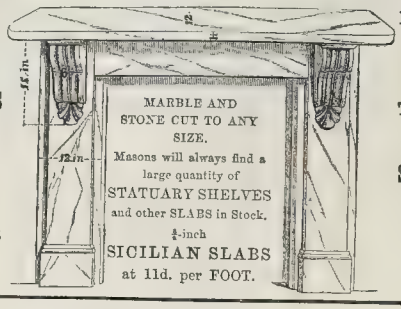
BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the



EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.

BOX STONE CHIMNEY PIECES
for 5s. 6d.
Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS
in great variety, equally low in price.

MASONS' WORK OF ALL KINDS CONTRACTED FOR,
AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF
500 CHIMNEY PIECES
always to choose from.
PRICE LIST ON APPLICATION.

MARBLE BOX CHIMNEY PIECE
for £1 5s.
First-class Bed-room ditto, £1 10s.

FIRST-CLASS
TRUSS MARBLE CHIMNEY PIECES
from £2 5s. to £3 5s.

A WELL-CARVED
STATUARY CHIMNEY PIECE,
with 13½-inch Piers,
suitable for a Drawing-room, which must be seen to be believed,
FOR THE SUM OF £6.
Net Prompt Cash.
PRICE LIST ON APPLICATION.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

THE LAND SECURITIES COMPANY

(Limited).
Capital, 2,000,000*l.*

DIRECTORS.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq. M.P.
Sir James Fergusson, Bart. M.P.
Col. Jocke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart. M.P.
Sir Laurance Palk, Bart. M.P.
Sir Henry Strachey, Bart. M.P.
William Dargan, esq.
Henry Farquhar, esq.
Sir J. Jutray
John Horatio Lloyd, esq.
Hon. William Napier.

Sir Charles Rich, Bart.
Granville Richard Ryder, esq.
Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, East End (54, Old Broad-street, E.C.), Office of International Financial Society.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the negotiation of special investments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32 Charing-cross London S.W.

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.

SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London.

When ordering the above, send FINISHED THICKNESS of Shutters, and the way they go up.

Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Engineering Depot, Palace Wharf, Stangate, Lambeth, S.

LITHOGRAPHERS, STATIONERS, and PRINTERS,
4 & 5, AGAR-STREET, STRAND, W.C.

The Builder.

VOL. XXII.—No. 1116.

Legislation on Technical Questions.

IN the House of Commons, a few days ago, one of those debates took place that attract but little attention from the masses. Yet those whose special knowledge enabled them to see below the surface, could discern fruitful promise of benefit beneath a dry husk of scientific and parliamentary technicalities. We refer to Lord R. Cecil's resolution with regard to private Bill legislation. Lord Robert Cecil moved "That it is expedient that the duty of ascertaining the facts upon which legislation in respect to private Bills is to proceed should be discharged by some tribunal external to this House." He pointed, very feelingly, to the personal sufferings undergone by the members of Select Committees in mastering the engineering questions put before them. In illustration of the very natural difficulty encountered by men, however able, who endeavour to understand things, in a few days' time, that form part of a profession it takes years to acquire, Lord Robert Cecil instanced the case of a committee on a certain dock Bill. "It consisted of a committee of five gentlemen, four of whom had no knowledge of commercial matters; and such was the ignorance displayed by them of the matter under consideration that, after being examined for a considerable period to show the necessity for the formation of a graving-dock," the witness heard one member of the committee say to another, "What does he mean by a graving-dock?" To which question the other replied, "I am sure I do not know, but I suppose it is something relating to ships."

Lord Cecil thought that the issue presented by every private Bill was very simple. On one side there was to be considered the injury done to private individuals; and, on the other hand, the advantage to the public from the object contemplated. The balance had then to be struck, in order to see which outweighed the other; but, before that point was arrived at, there was an enormous amount of facts to be proved, and a great deal of time was wasted in ascertaining these facts.

"... For instance, on a water Bill, which had occupied a great deal of time this session, a great number of questions was put on such matters as the amount of population, the present supply, the exact nature of the scheme, the distance of the sources, the angle of fall, the size and safety of the reservoirs, the area of the gathering ground, the rainfall of the district, and the chemical character of the water. But these were simple facts which could be easily ascertained by a scientific arbitrator appointed by some parties at little expense, and without imposing any labour on members of that House. The same with railways,—gradients, curves, distances, the geological character of the ground, estimates for the work; these were the sort of questions with which much of the time of committees was taken up, and which might easily be disposed of by a scientific arbitrator. In one water Bill committee hours were occupied in questions about the safety of a reservoir; and in a railway committee a day was taken up in inquiring into the nature of the ground,—neither of them questions fitted to be decided by that House. Then, there were questions of opinion,—the traffic between different places, the injury done to individuals,—which would be much better decided by a tribunal, either by a jury empannelled on the spot, or by the tribunal recommended by the Chambers of Commerce."

He concluded by moving that it was expedient that the duty of ascertaining the facts upon which legislation in respect to private Bills was to proceed should be discharged by some tribunal external to the House. Mr. Milner-Gibson, in opposing the resolution, opined that whatever external tribunal was fixed upon there must be an appeal to the House, where the battle would have to be fought over again at additional expense. Lord Stanley, while agreeing that the system was capable of improvement, expressed somewhat similar opinions to those of Mr. M. Gibson. The most acute and powerful speech on the question was clearly that by Mr. Lowe, who thus gave us another instance that, however physically shortsighted he may be, his mental vision has a much farther range. He very forcibly showed that "committees were in somewhat the same position as juries would be if they were called upon to administer the law without judges to assist them." Committees were in the hands of practised counsel, "by whom they were addressed in artful and able speeches, and they had to perform many of the duties of a judge, at Nisi Prius, without the training and practice which gave authority and facility to the decisions of such judges." Mr. Lowe proposed that a single person should take the evidence now taken by committees, and report it to the House, leaving it for parties to move for a committee, if a committee were desired. The members of the House would then act "like special jurors in a case at Nisi Prius."

Lord Robert Cecil's motion does credit to the most rising statesman of the Opposition. It was lost, but the evil Lord Cecil intended to mend will perennially recur, and some change must take place sooner or later. The objection made by Mr. Milner-Gibson and Lord Stanley, that the proposed transference of Parliamentary functions would lead to appeals and double expense, can be made with regard to any civil case,—any patent case, for instance, or a case like that which has resulted from the "pursuit of an elderly Phaon by a litigious Sappho,"—can be at last taken before Parliament. When, as was stated by Mr. Whalley during the debate, 1,500,000*l.* out of 3,000,000*l.* spent on new lines in his own district were consumed in Parliamentary expenses, it is difficult to see how any change of system could increase the notorious expenses of committees. These enormous sums thus lavished do not benefit M.P.s, do not benefit the public: they go into the pockets of Parliamentary barristers and Parliamentary agents,—men who, however worthy and eloquent, are not producers of the national wealth; but are, in these cases, most decidedly consumers, both of time and money. In the ordinary walks of life, the longer people are about their work the less money do they get by the end of the year. The reverse is here the case; and the best joke about the matter is, as was stated by the member for North Lancashire, "that there is no single individual who appears before a Parliamentary committee who has not a direct pecuniary interest in prolonging the proceedings." In the next place, the companies who have spent all this money in getting leave to build a line or erect waterworks, or lay down gas, or build docks, expect, and practically do get, a monopoly for their money. The great railway companies were instanced by Mr. Whalley as having lately "combined as one man" to oppose, and consequently defeat, the main provisions of a Bill now brought before the House by the Board of Trade for affording facilities for constructing railways. Witness, again, the London waterworks companies, who deliver the worst water of any city in the world at the highest rates of any city in the world; and whose shareholders get enormous dividends every year. Who could oppose these monopolists, backed as they are by a compact phalanx of interested M.P.s? We are prepared to maintain that the money wasted in parliamentary committees and through their results would, if properly employed, have long ago both purified and embanked the Thames,—would have long ago provided us with pure and cheap water,—would have even put us in the way to the solution of one of the great problems of the day—the utilization of the sewage of cities. What has this system done for those amongst us who are not shareholders in these Parliamentary successions to sixteenth century royal monopolies; to those amongst us who only wish for good and cheap water, light, ventilation, and conveyance? In the words of Thomas Carlyle, "only powder of millstones (called Hansard Debatings), and a detestable brown substance not unlike the grindings of dried horse-dung or prepared street mud, which though sold under royal patent and much recommended by the trade, is quite unfit for culinary purposes."

It is indeed in Hansard's Reports of the Select Committees that the patient student can acquire some notion of the weakness of these parliamentary tribunals. Costly as the machinery is, it is most inefficient. And it is only natural that this should be the case. As the *Times* remarked, in reference to Lord R. Cecil's proposal, the members of the committees "have often to get up the first elements of the question—not matters for legislators at all, but rather for engineers, chemists, physicians, and other professional classes." Has the old right divine of kings descended on the heads of M.P.s, or are they gifted with papal infallibility, to be enabled to settle what are often most difficult technical and scientific questions? In order to simplify the matter, let us consider a question of public polity in which are involved some interesting scientific problems,—such as, for instance, the Bill which Mr. Laird has just succeeded in passing for the compulsory testing of the chain cables and anchors of merchant vessels. It could have been by a mere chance that a Select Committee appointed to investigate the scientific bearings of the question should be able to choose the best witnesses for its purpose. Who amongst the members of the committee would be able to choose the best and most scientific witnesses in testing iron, and, above all, on testing the machines for testing iron? Accordingly, on the list of witnesses examined before the chain-cable and anchor committee of 1860, we do not find a single name of eminence in the engineering profession; nor do we find any evidence possessing what may be termed a scientific value. Granting that a select committee on a scientific question has succeeded in making a good choice of witnesses, why even then the members have to pass through a kind of education or apprenticeship before understanding what is wanted of them. And it is often more difficult, even for an expert, to ask, to state, to suggest, a question, than to answer a question. Let us, again, suppose that the right witnesses have been chosen, the right questions asked, and that the right answers have been given. Who is to draw the right deductions from the immense amount of resulting evidence? who is to thrash the good grain from the heap of straw and chaff? who is to deduce the right principle for the special case requiring legislation? As was lately very well said by our able contemporary, the *Saturday Review*,—"All experience teaches that principles of legislation, whether on financial or other topics, must be developed by the writings of thoughtful men, and the discussion of interested advocates beyond the walls of Parliament, rather than by the direct action of such a body as a Select Committee. Boards and committees are sometimes capable enough of balancing expediencies or collecting evidence of facts, but they never succeed in discovering principles." Of the truth of this remark we have an instance in a paper on the testing of chain cables, portions of which we have quoted, lately read by an engineer before the Society of Arts. Will it be believed that witnesses before the committee were found to maintain that the

material of a chain was not injured—was not "crippled," to use a term common among engineers,—by being broken several times? and that the committee adopted this evidence in their report as a proof that the application of a severe strain has not an injurious effect on a cable? If the conclusions of the report be right, the quickest and best way to improve the material of a bar would be to break it. An extension of this discovery would lead to our breaking down any iron railway bridge we found too weak, and to then building it up again, carefully using the same materials. Most engineers, however, have long recognised that iron is injured by being strained beyond its limit of elasticity, and more especially if it be strained several times up to breaking point. That iron thus strained is rendered brittle, that the longitudinal elongation under a tensile strain, which is naturally accompanied with a lateral contraction, must contract and transpose the internal structure, is a very probable explanation of the phenomenon.

It appears to us that not one of the speakers in the House on Lord Robert Cecil's motion took a sufficiently comprehensive view of the question before them; and we will now show the point from which, as we think, the question should be regarded. The main difficulty in legislating on private Bills is clearly the difficulty naturally felt by the members of the committee in understanding the question before them. How can it be possibly expected that the middle-aged country gentlemen, the retired merchants, the professed statesmen, the army or navy officers, comprising Parliamentary committees, should be able to fathom the engineering, chemical, or medical questions placed before them in evidence? The majority of these gentlemen were born in the pre-scientific era, before the full growth of the modern sciences, the practical application of which to special and local cases forms the subjects these committees have to consider. How could it be expected, even by the most sanguine mind, that a question of, for instance, medical jurisprudence could be properly settled by a half-dozen gentlemen chosen nearly promiscuously from a body of men like that comprising the House of Commons? What would be the state of our law courts without a judge, without a code of laws, but in which each and every case had to be settled by a jury? It is not improbable that many fair decisions would be given by a dozen intelligent, honest Englishmen, even without the aid of a presiding judge. But what would be the results if only complicated scientific cases were brought before such a jury? Take the trial of patent cases in our present law courts as an instance. Even when a jury is aided by the usually very powerful and practised intellect of one of our judges, many of the cases have actually broken down from the simple inability of the court to understand the questions at issue; and a Parliamentary committee is often in the position of a jury without a judge. For these reasons, the witnesses are ill chosen, absurd and improper questions are repeatedly asked, and the report on which is founded on the whole evidence is often egregiously wrong. The greater number of the questions brought in this way before the House are engineering questions. Fifty years ago, such things as gas, or telegraphs, or railways, or steamers were unknown. The introduction of even such familiar things as iron cables is only fifty years old. Legislation has thus to encounter special and technical difficulties which were unknown to a preceding age. It is, therefore, only natural that the machinery should be altered to meet the new wants.

In truth, the question of the legislative handling of the social applications of modern discoveries is only a single phasis amongst many others of our time. Look at the influence merely of railways on land warfare, leaving out that exerted by the new *armes de précision*, which have also issued from engineers' workshops. As Captain W. H. Tyler (of the Board of Trade) remarked the other day at the Royal United Service Institution, in the presence of the Prince of Wales,—"It is very plain that, as railways increase in number and come into common use in military operations, so it will become more desirable that every soldier in the army should be able to assist in destroying or repairing them. In previous lectures he had pointed out that the use of the spade in warfare will necessarily increase with the common employment and a growing efficiency in the use of rifled weapons; and he would now add that the use of railways in war may render it still more desirable that every soldier should be trained to be more or less of an engineer." About the application of iron in large masses for the arming of war-ships, it is scarcely necessary to speak. But even international laws have had to be modified, and will have to be still more closely adapted to these changes. Agriculture is now scarcely anything else than an application of chemistry and a branch of engineering. These things are profoundly modifying the bases of modern social intercourse. A successful engineer or chemist has, at one and the same time, both the prestige of the successful man of science and the wealth of the merchant. And, accordingly, men like this take social position almost equal to those of the great architects and painters of Mediæval Italy. At the bottom of all the late turmoil about education in our public schools, is the desire felt by most men of common sense that some attention should be given by the English boy to the arts and sciences that convey him swiftly from one place to another, that clothe him, that provide him with light and warmth, that can enable him to send, lightning sped, a message to his parents in India; to the sciences he may require when fighting for his country, at sea or by land. Sooner or later, these educational changes will have to be made, if we do not wish to be left behind by other nations. Our Board of Admiralty, which in its composition completely ignores modern discovery, will also, sooner or later,—perhaps under the pressure of a great naval war,—have to be differently formed. Only one class is now administratively represented at Whitehall,—the old class of naval officers. Naval constructors, marine engineers, and other classes are completely left out; and in this way, again, the composition of our naval administration completely differs from the modern French marine administration. One of the main reasons that our present patent laws excite such discontent is simply to be found in the fact of the incapacity of ordinary tribunals in dealing with patent cases,—which, again, are simply questions of engineering or chemistry. Sooner or later specially formed tribunals will have to decide patent cases, and the many lawsuits involving scientific questions. Under present circumstances any decision is most difficult and expensive. Patent barristers being special men in a special profession, have to be exorbitantly paid; and a multitude of highly-feed witnesses, by the mere weight of authority, and by continual repetition, have to painfully draw decisions from juries upon matters understood by scarcely one amongst the twelve. If, instead of a dozen promiscuously chosen shopkeepers, a certain number of engineers or chemists were chosen to decide on such questions, the expenses and loss of time naturally attending such trials would be greatly diminished. Of course, we do not pretend to say that the adoption of such a plan would be an effectual remedy; but the idea is perhaps worth consideration, and, at any rate, the present arrangements simply result in a mockery of justice.

Now, it would be an interesting question how it is that these sufficiently obvious truths are so much disregarded in England. With the most intellectual nations of the Continent they have been long recognised with more or less completeness. That is to say, the great and searching influence on every phasis of life, of the modern command over matter acquired by our extended and applied knowledge of the natural sciences, has long been comprehended by the most commanding spirits of France and Germany. Take Goethe, for instance, the poet of the greatest intellectual calibre Germany has ever produced. He turns his Wilhelm Meister into a geologist, and Dr. Faust into a civil engineer. In Goethe's later years he gave great attention, and with some success, to natural philosophy. He then sang,—

> "Von Gott, dem Vater, stammt Natur,
> Das allerliebste Frauenbild;
> Des Menschen Geist, ihr auf der Spur,
> Ein treuer Werber, fand sie mild.
> Sie hehlten sich nicht unfruchtbar:
> Ein Kind entsprang von hohem Sinn,
> Sie ist uns Allen offenbar;
> 'Naturphilosophie sei Gottes Enkelin.'"

For two generations the natural sciences have been universally and systematically taught in Germany. Napoleon I. reorganised public education in France from a similar point of view, and his nephew is now directing his attention to further improvements and modifications of the system bequeathed by his uncle. Far different has been the case in England. Here the leading men of the country, the leading statesmen, lawyers, and writers have been for the most part brought up with an almost utter disregard of physical science, while even mathematics have been almost left out of all but university educations. The absence of State interference has some disadvantages, and one of its results in England that every schoolmaster can teach what seemeth good in his own eyes is not the least. Applied mechanics have been cultivated with unexampled success in England, but this has been greatly due to our great natural resources; and the generally felt want of sound instruction is already causing departments of British manufacture to be much surpassed on the Continent. It is just the want of scientific knowledge that leads members of Parliaments to under-estimate the work involved in legislating on scientific and technical matters.

Mais revenons à nos moutons—the Select Committees of Parliament. It appears to us that the work of Parliamentary select committees on scientific and technical questions would be greatly facilitated if they had the benefit of the assistance of experts, not merely as witnesses as at present, but also as advisers. Let a committee, when once formed, at once make use of the professional advice of an engineer, or a chemist, or a physician, or a shipbuilder, or a military or naval officer, according to the subject intended to be investigated. In the first place, a proper choice of witnesses could thus be made. The erratic vagaries of both witnesses and barristers could be at once checked by an expert gifted with ordinary firmness. As was remarked by Lord R. Cecil, "It was owing to the want of knowledge of the members on special subjects that they allowed themselves to be brow-beaten, as they sometimes were, by the Parliamentary counsel." What can be said to the outrageous case of this kind stated in a late number of one of our contemporaries? The Parliamentary committee on the Metropolitan line is now hearing evidence brought before it as to the projected line from the Finsbury extension of the Metropolitan at Little Moorfields passing under Finsbury-circus and Bishopsgate-street by the north-east end of Houndsditch, under Aldgate and the Minories, to a point where the Blackwall crosses Vine-street, and then to the north-east of Trinity-square, Tower-hill. "If there be one point which might be supposed to be clear and undisputed in connexion with this project, it is that the extension, if made, will pass through a populous district, and would have in consequence a very large traffic. But the unfortunate committee are not even permitted to assume this point; and there, in the sultry heat of the crowded committee-room, the members have to receive evidence from Abraham, Isaac, and Jacob as to the traffic of Houndsditch, the trade of Rag-fair, and the trading charlatans of the Minories. "I should think," said Lord Stanley, "mildly addressing the counsel, "that it might be assumed that there would be a large amount of traffic on the line if it were made." "Not so," promptly, and with curious infelicity, replied the learned counsel, profusely perspiring under his load of horsehair, and who represented an opposing line in the same locality; "I am not prepared to admit that my learned friend will get a single passenger upon his railway if it were made." Lord Stanley sank back into his chair in a state of hopeless resignation, and more witnesses were called to prove that the people in the east end of London have frequently to ride in omnibuses, in cabs, or walk beyond the crowded locality of Whitechapel and Aldgate. Now such things are abuses, and learned Parliamentary counsel are the only gainers, to a great loss of most valuable time. A previous investigation of a few matters of fact would prevent this. An expert, again, would at once be enabled to draw the particular information and evidence wanted from each witness as he appeared; and, lastly, a sound and scientific report could be drawn up by such aid. An objection could be made on the score that it would be difficult to get a professional man perfectly unbiased on the question at issue. We do not see that this objection is tenable. There would clearly be many checks in the committee-room itself, and the fact that all the evidence would be published is of itself a sufficient answer to the objection. Are the members themselves always perfectly unbiased? There can be no doubt that the "members of committees discharge a most onerous and ungrateful duty with great ability, and the greatest integrity;" at the same time, perfect impartiality on all questions is certainly not obtained. Witness the London water supply, the oppressive monopoly of which is bolstered up by a compact phalanx of M.P.s.

PROGRESS OF THE METROPOLITAN SEWERAGE.

THE NORTHERN OUTFALL.

THE reports of Mr. Bazalgette to the Metropolitan Board of Works, have recorded progress of that great undertaking, the sewerage of London, until now they offer immediate prospect of consummation of the entire arrangements for outfall, and indicate a proximate termination of nearly all those for interception by the sewers of the different levels. The only portions of the undertaking in which it can be said there is much to be done, are the Low-level sewers; and, even there, the only considerable arrear is in that division of the line which is connected with the Thames Embankment. A large portion of the western sewerage, to be ultimately joined with the Northern Low-level sewer, is complete; and an eastern portion of the Low-level is this week about being tendered for. Of the Low-level line on the southern side, a length of four miles is finished, as stated in the last report. The reservoir just below Crossness Point, and the machinery for pumping the sewage of the south side, are very near to completion. On the north side, the sewage of the High-level, with a large portion of that of the Middle-level, now passes to the reservoir, or three of its compartments, and to the Thames, at Barking Creek. As shown by the state of some streets, there is work yet to be done to the Middle-level sewer, and the Piccadilly branch; whilst there are indications at points variously distant from these lines, of much work in hand connected with the transverse tributary sewers, and with old main lines which are to serve in future as storm-water outfalls. The machinery and stations for pumping the Northern Low-level sewage; and the method of, and many of the arrangements as to, the disinfection, or deodorization, originally contemplated westward, as for the whole of the sewage of London, may be considered in abeyance: but the pumping-stations at least, will be proceeded with in time for the completion of the sewer with which they are connected.

Such being the advanced state of the undertaking, we would invite renewed attention to the several divisions of the comprehensive work. It is full of matter of interest, suggestion, and instruction, for those who have watched its progress, or will take the trouble to follow the details of the numerous, and at first seemingly complicated, arrangements, of which the consummation will involve concealment to the common eye; and, before the last compartment of the reservoir and some other portions of the structural disposition of the Northern Outfall are closed in, we would endeavour to help those who may be disposed to visit the works, to a better comprehension of them than is likely to be obtained with ease otherwise, even given the advantage of reference to the original drawings. We may subsequently offer similar particulars of the features of the Southern Outfall and system.

Already the state of the work of the Northern Outfall is such as to allow only a portion of the construction underground to be seen; but enough may be examined to reward any one who can go prepared with information concerning the general system of the metropolitan sewerage, and the particular arrangements designed and in operation. The best mode of getting to the spot, is probably from the Fenchurch-street station by the railway to North Woolwich, whence the outfall is distant about two miles, by a pleasant walk along the river-bank after rounding the Pavilion Gardens. Soon after passing Bow, the embankment-line of the long outfall-sewers is seen from the railway: it is crossed on the level, before the Stratford Bridge Station is reached; and, after turning south from this latter station, the railway passes under the sewers. The iron troughs or culverts over the many branches of the Lea, and several intersections of the sewers with road and railway, can be glanced at. Each of these, along with the brick-culverts for the marsh-land drainage, required special contrivance. One of the many matters of detail which had to be provided for, was the expansion and contraction of the iron culverts without escape of sewage. This is managed by forming a connexion between the iron and the brick-work, of sheet-lead, in some cases, attached at one edge, to the one material, and at the other to the other, and bent to allow of the required play, the end of the iron culvert being inserted into that of the culvert of brickwork, and being, of course, carried on rollers. In other cases, a thick strip of vulcanized india-rubber is substituted for the lead. There is much ingenuity in these contrivances; but the contact of the two metals may be attended by galvanic action, and destruction of the iron; whilst the india-rubber would seem to possess scarcely sufficient durability. Amongst the matters of which no idea can be gathered during the transit, are the structural arrangements needed for passing over mains of the East London Water-works Company. In the walk from North Woolwich, the eastern portion of the line can be seen. At last, coming to near Barking Creek, the sewers-embankment sweeps round, skirts the reservoir, and ends at the penstock-house, under which the sewage passes, with certain intervals of time, to enter the river as will shortly be described. In the course of the walk, the low-level of the marshes compared with that of high-water of the river, the method of irrigation at present in use, and the suitable position of the land for irrigation from the sewer, will not fail to be noticed. The value of the land as at present irrigated, would seem itself to interpose difficulty of change, the subject being viewed from the owners' position.

Those who propose to visit the works should be provided with a card, or order, which we are enabled to say can be had on proper application at the Office of the Chief Engineer to the Metropolitan Board, in Spring-gardens, by any of our readers; but the whole of what we shall speak of, or what is connected with the sewers themselves, can hardly be seen, at least safely, except under guidance of one of the engineers of the Board.

Along the sewers-embankment, there is a good road by which the outfall is distant somewhat more than five miles from Old Ford, at which latter spot, near Victoria Park, the important division of the works relating to the High and Middle Level sewerage, connecting the two systems, and providing storm-water outlets to the Lea, is situate. The road may eventually form an important access to the Victoria Park, for the inhabitants of West Ham and Plaistow,—districts, however, in which increase of the population is not to be desired. The marsh, and the banks of the Lea, or Bow Creek, seem to be the chosen home of nuisances, which pollute the air more than the sewage in the sewer itself. At Bow Bridge, the water even of the stream, or Creek, is very offensive, although the sewage of Hackney no longer drains into the Lea. The West Ham district is so unfavourably circumstanced for drainage, that when Mr. Rawlinson sewered it, he could not get his trenches dry, and was obliged to set the inverts, ingeniously contrived, of his sewers, by feeling the place for them under water.

It is not our present object, however, to describe many features of site or construction of the Northern Outfall-line, but those of the extremity itself connected with the reservoir. Still, it is necessary to remind the reader of some of the aims and principles which have ruled the arrangements of the metropolitan sewerage.

The whole subject of sewerage almost may be said to be comprised in one of outfall, if we include in the latter question that between merely getting rid of the sewage and utilizing it on land. When the metropolitan scheme was decided upon, the position was that something was imperative to be done, if only experimentally, at whatever cost, with the object of purification; and apparently it was impossible to be satisfied with any system of utilization that would wholly resign the use of the river. It may now be regretted that some system of sewers radiating from London, and serving irrigation of lands on other sides of the metropolis than the east, could not have been designed; but it must be recollected that the subject was not even in 1855 or 1858, so far advanced as it is now; and that now, the readiness of farmers to take the sewage, and the idea of success of schemes based upon such readiness, may be not altogether so clear as to convince persons responsible for success, the Board and their engineer. As to other methods of utilization than by irrigation, it must be confessed that the question of these has advanced but little. For example, we learn that one of the recently-established companies, the Eureka, dealing with night-soil and the contents of ash-pits or middens, at Hyde, near Manchester, finds extreme difficulty in disposing of their disinfected material; and although we say, as we have always argued, that such a circumstance is inconclusive in the question for the authorities of towns,—whose duty might be to get rid of the refuse innocuously, even at cost to the town,—there is no doubt it is important evidence against much that has been adduced for the consideration of the Metropolitan Board of Works.

The system adopted in 1858, and to carry out which the works were commenced in 1859, therefore was that of the interception of the sewage then running into the river,—or preserving the lines to old outfalls only for occasional relief on days of extraordinary rainfall,—and the relief thus of the Low-level districts from the evils of tide-locked drainage, relief which already has to great extent accrued, even though the Low-level sewers be not completed. The sewage, along with the ordinary rainfall of an immense area, and including the water of important tributaries to the Thames perverted to the condition of sewer-rivers, was to be conducted all eastward, and so as to create the impression with some persons, that the volume of the Thames would be diminished seriously for the purpose of navigation, and that the evil of the stench would be in some respects increased through the means by which it was sought to be combated. Without doing more than say that diminished volume of the river combined with the higher rise of the salt-water, is important in the sewerage question, we may note that the conclusion was that the whole water of the streams in their ordinary state, was required to move and carry on the sewage to the place of outfall. Hence the elaboration of arrangements at Old Ford, by which the Middle-level sewer might be made to serve for the relief of the High-level sewer, more subject to be flooded, and the water of the latter might be turned to account in moving the thicker Middle-level sewage; and by some of which arrangements, the whole excess-product of storms might be allowed to escape into the Lea. The disposition of the outfalls to the east of London, merely did not resign the chance of an application of the sewage to the land, in the eastward direction, where levels were most favourable for irrigation.

It may be necessary further only to remind the reader that the line of the outfall-sewerage from Old Ford to the site for the intended pumping-station at Abbey Mills, just west of the eastern branch of the Lea, is formed of two channels; and that eastward of the station, it is of three channels. These may be regarded as separate sewers; and thus indeed we have above alluded to them. The reason for the arrangement, instead of that of one sewer, was not merely to admit of repairs; it allowed the sewage to be brought to the Thames at a higher level, and consequently to be passed into the river at a higher state of the tide.

It was desirable to relieve as large a portion as possible of the northern area to be dealt with, without recourse to pumping. Certain levels, now comprised by the high and middle divisions of the system, were thought to be capable of drainage by gravitation.

The first circumstance going to rule the level of sewers, is the level of the basements of houses. In the case of London, the ordinary sewers were to be preserved; thus the level of the house-drains and sewers, as of Highgate and Hackney, Bayswater and Piccadilly, had to be specially considered. This made the level of the invert at the starting-point on the western bank of the Lea, slightly more than 9 feet (9·022) above that of Trinity high-water mark. Then a gradient had to be decided upon, calculated to ensure the proper flow of the sewage, whilst the outfall should be so high as not to be tide-locked, unless for a very short period of each tide. A fall of 1 in 2,640 or 2 feet in the mile,—and alike throughout, to insure equable flow,—was given to the sewers, the various crossings of roads and railways being capable of being accommodated by great contrivance. Thus in the length of 5 miles 1,400 feet which was that of the line at the date, August, 1860, of the original contract-drawings, the inverts of the sewers came down to the level of about 1 foot 4 inches (1·357) below Trinity mark. Actually the length is some feet more than we have given, the point of outfall having been placed rather nearer to the mouth of Barking Creek.

To cast the sewage into the Thames on the rising tide, except for one hour before high-water, would have been to send it back to London. The object was to allow it to be taken in the reverse direction, as far as the ebb-tide would carry it. It was necessary, therefore, to stop the flow into the river, twice for a certain length of time in each twenty-five hours, and to store the sewage for ten hours. A reservoir capable of storing sewage for such time, thus is

an essential feature in the arrangements of the outfall; and the level of its floor according to the calculation, should be not lower than that of the river at one hour and a half after the mean high-water. The mouths of the three parallel lines of sewer are closed at the proper time by penstocks; and the several upper penstocks of the reservoir are opened: the sewage then accumulates until the proper time of the tide, when lower penstocks are opened, and the sewage flows into the river, as it does also from each upper sewer or its tumbling bay, by nine culverts at a lower level, where the inverts of these end-outlets are less than a foot (0·79) above low-water mark.

The object is to pass the accumulated sewage into the river, in as short a time as possible, and to allow the general sewage to escape, and both to descend as far as possible, having regard to the turn of the tide and the inevitable backward movement of the sewage with the tide. It is assumed that eventually the sewage will get out to sea, and that meanwhile it will be diluted with a hundred times, or as once said, four hundred times, the volume of water of the Thames at London Bridge. Whether this result is attained, or whether the differing specific gravities of river-water, sewage, and sea-water, will tend to produce deposit, or even to cause the sewage to be returned to London Bridge, is a question which we would rather not now enter upon. The works are so far advanced that there will shortly be the best means of testing various theories; and pending the time of experiment, we perhaps ought not to come to any conclusion on the subject. What we have seen, belonging to the question last referred to, we need not hesitate to mention.

The discharge of the sewage, just now, commences about one hour after the time of high water. The Fleet Sewer is not yet intercepted; and much of the Middle-level sewage above still drains into the Thames. Recollecting that none of the Low-level sewage is intercepted, probably we may assume the sewage which now flows into the Thames near Barking Creek as about one-fourth of the ultimate volume for the present inhabited area of the jurisdiction of the Metropolitan Board, north of the Thames. We saw the sewage, on Saturday last, boiling up from the mouths of the nine culverts,—which were at the time of tide, below water,—and passing down in a black stream which might be one-seventh, or one-sixth, the breadth of the river, and was marked by a defined edge from the water which was of greenish hue beyond. At that particular time, certainly, the sewage was pent back in the embayed portion of the river, by the tide, which sets in strongly there in the first hour and a half of ebb; and the current of the Roding, and outflow from Barking Creek, did not seem to have the slightest effect, as we were told it would have some hours later, in diverting the course of the sewage to the middle of the Thames. Far into the distance the line could be traced; and we shall not be satisfied about the sewage getting away from the bank, and being mixed to a greater degree with the Thames water, until the engineers of the Board have carried out an expressed intention of following its edge to the limit of distance where division of the streams can no longer be perceived. Two miles below the Northern Outfall, however, is the Southern Outfall in Half-way Reach. Thus, the present volume of the Northern Outfall being to be multiplied by four, and the Southern Outfall having to contribute its distinct stream, the position of Erith about three miles farther, and even of Gravesend, would hardly be to be envied according to present appearances; and disposal of the sewage by irrigation, if there be adequate quantity of land, or treatment of it in the reservoir, and such appreciation of the value as may produce the demand and pay cost of carriage, must be looked to as the forlorn hope for a more satisfactory state of things. As regards carrying the sewer farther, whether with the view of applying the sewage to the marshes beyond Barking Creek, or placing the outfall at the mouth of the Thames, there is only this difficulty, that whilst greater headway than 8 feet 6 inches, that of the crossing at Old Ford, would be required for the navigation of Barking Creek, (since larger vessels go up to Barking Quay than get up the Lea,) there would not be even that 8 feet 6 inches.

The whole reservoir will store sewage for eleven hours; and it can be emptied in about two hours; and generally, like every part of the arrangements that we have heretofore had to describe, it is exceedingly well contrived and constructed. It may be well to mention, that any discrepancy may be understood, that modifications have been made since the dates of publication of our several notices of the original design for the sewerage generally, and the outfall. Details of the connexion between the outfall-sewer and the reservoir, and the discharge from the latter into the river, were not decided upon till recently; and the times of discharge into the river, may yet be slightly altered.

The reservoir is placed at one side of the sewers, that is, the east; and the sewage flows into the reservoir,—or rather, directly, into an intermediate trough,—through the upper penstock-openings, from certain lengths of culvert that are placed transversely to, and connect, the three main lines where alongside the reservoir. By this arrangement, the sewage-flow turns at a right angle in passing into the reservoir. In passing out, it follows a course precisely similar, (excepting that the flow is in the reverse direction,) through similar openings and along similar transversely-placed lengths of culvert, to turn into three outlet-sewers, at the lower level, corresponding in position, though not quite in their form, with the three lines above. This arrangement of two stories, so to speak, or three sewers in each level, commences (according to the original drawings, which, we are told, have in this case been observed,) from a point which is distant 490 feet from the line of the river-wall, or 670 feet from the mouths of the nine culverts, and continues in the direction of the river for a length of 400 feet, but spreading out from the breadth 34 feet 6 inches, that generally of the three sewers between the pumping-station at Abbey Mills and the reservoir, to the dimension of breadth 74 feet.

From Abbey Mills, up to the point mentioned as 490 feet distant from the river-wall, that is to say in the arrangement of the sewers of the general construction, and where wholly above ground, as for the greater part of the length of four miles from the pumping-station, the three lines are carried on arches of 17 feet to 17 feet 3 inches span, springing from concrete-piers, which measure on plan 4 feet, or 6 feet 6 inches, by the before-mentioned 34 feet 6 inches. The arrangement was referred to in an article in our volume for 1860, where the dimensions in section of each of the parallel lines were given, 9 feet for the span of the semicircular vault, and 9 feet for the total height, in the clear. The bottom, or invert, is a curve which is struck from a centre at the crown, with a 9-feet radius; and the sides below the springing of the covering vault, curve inwards, being struck with a 9-feet radius from centres at the springing. In one of the lines at least, the stream has already been up to about half the height of the crowning vault, as shown by stain on the brickwork; but, on Saturday last, when the whole sewage was passing along only one of the lines, the depth of the stream was little more than 2 feet, though there had been a considerable quantity of water from the High-level, not long previously. For the diversion of the flow into one or other channel, we may mention that not only are there the arrangements at the overflow-chamber at Old Ford, but there are iron gates 4 feet 6 inches in height, as well as chases in which dam-boards can be fixed, at the point where the Low-level sewage is to come in, and where the parallel lines become three in number.

Descending at this point, and standing upon a temporary bridge just above the surface of the stream, the sewage was seen passing swiftly on. It was rather inky, instead of muddy-brown like the water of the Thames in its worst state; and it seemed slimy rather than charged with insoluble particles.

The somewhat inky colour was exchanged for a brown slimy appearance in the mixture of sewage and Thames water seen in the boiling-up at the ends of the nine culverts already noticed. Of course, in the sewer the sense of smell was not gratified; but the stench was less than might have been expected. At the outlet, solids of the sewage were floating collected together, and seemed to have passed down the line without maceration or decomposition. The tide not having fallen below the crown of the arches, there was not the best chance for their being forced away from the bank or wall. The sight was disgusting; but, were it not unsafe to judge from a single occurrence, the fact might show that much of the sewage was passing to the river so rapidly as not to be decomposed, and to give off noxious gases.

Certainly, at the place of previous inspection, four miles from the outfall, there seemed to be no want of proper fall. In the line along which we were able to walk, the middle of the invert was generally as clean as if the bricks had been scrubbed,—so much so indeed, as to suggest that the blue Staffordshire bricks, used in some of the sewers, should have been used throughout the metropolitan system, for inverts. But close to the sides of the sewer, there was sufficient deposit on the invert, to cause difficulty in walking without slipping; and a coating of perhaps a quarter of an inch in thickness, of slime, was found upon the sides of the sewer, for a foot, or perhaps more, in height. Whether this perfect absence of deposit in one place, and speedy commencement of it in another, should teach anything as to forms of sewers, we must leave to our readers' consideration: at present, we but note the facts.

Within the 490 feet before mentioned, brick piers, 3 feet thick, were substituted for those of concrete; and they carried arches of 18 feet span. The piers were pierced by arches, with inverts, three arches in each pier, increasing in span and varying somewhat in form of opening as the outfall was approached; but these openings have now been connected to form part of the three lower channels before described. Over the 18-feet arch which forms the last bay but one in the length, 400 feet, of two-storied construction, and over the lines of sewer, the penstock-house, and residence for the persons in charge of the penstocks, is placed. At the 400 feet, the three tumbling-bays commence, where the sewage dashes from the sewer-mouths to the lower level, 16 feet down, and 22 feet the length on plan of the three inclined planes of granite of which each tumbling-bay is built, on to the nine lower culverts which extend to the river. Between the foot of the incline, however, and commencement of the nine culverts, there is a length of 28 feet, which is paved with granite. The 22 feet length, and the 28 feet, are vaulted over at different levels: but together, the spaces form one large chamber; and the three chambers, one corresponding to each of the three sewers, are connected by small openings at the base, in the transverse walls, through which the sewage may pass. The sewage from the three lower sewers of the 400 feet length before described, that is the sewage from the reservoir, finds its way into the chambers by six openings,—two being placed at the sides of the substructure of each tumbling-bay,—whilst from each chamber there are three culverts of the nine to the river. Each of these tumbling-bay chambers measures on plan 50 feet by 21 feet, and has an internal height in the loftiest part, next the mouth of the sewer, of about 27 feet to the crown of the arch, and one of 14 feet 6 inches in the portion next to the three culverts of the nine. The nine culverts extend for a length of 220 feet forward, or 180 feet from the line of the river-wall; and farther, for 130 feet towards the centre of the river, there is a channel of 68 feet, narrowing to 66 feet, formed by concrete bottom and campsheating at the sides. The outlet-end of the construction of the nine culverts also is protected by piles and campsheating; and the whole is covered by a bed of concrete. All this construction is covered at high-water. Each culvert of the nine is built of brick, with semicircular vault, perpendicular sides and segmental invert, and is 6 feet in the clear width, and the same in height.

The crown of the arch at the place of discharge is just the level of Ordnance datum. Trinity high-water mark is 12 feet 6 inches above that level, or as we have said, about 1 foot 4 inches above the invert of the upper line of sewer; and the low-water of the 27th of March, 1860, was found to be somewhat more than 6 feet 9 inches (6·79) below the datum.

Originally, as shown by the contract-drawings, it was intended to place tidal-flaps as well as penstocks to the ends of the three sewers of the upper level. The tidal-flaps, however, since, have not been thought necessary. The penstocks are closed to shut out the tide, and raised to allow the sewage to escape, when it is not going in to the reservoir. Penstocks also are placed at present to the lower outlet sewers; but something is said of their not being retained, in which case the tide would flow up those sewers, their whole length. Doubtless, consideration will be given to the question whether this would add to deposit.

We are now in a position for making clear a description (to be given in another article,)

of the form and construction of the reservoir, and for adding some essential particulars, not obtainable from any drawings to which we have had access, of the connexion of the reservoir with the upper sewers and lower outfalls. Before proceeding, however, it may be well to allude to the character of the strata at this spot. Where the three tumbling-bays now are, the trial borings showed a stratum of 12 feet of peat, coming after 15 inches of surface-earth, 2 feet of light-brown clay, and 2 feet of soft blue clay, here stated in descending order. After the peat came 2 feet of dull blue clay, 4 feet of sandy clay, and then gravel, with water. A bed of varying thickness, of peat with decayed wood and trees in some places, was found over the whole area to be occupied by the reservoir. Along the line generally through the marshes, a greater number of discoveries than have been noticed in the papers, were made. One of them, recent, and the most curious, if no deception has been practised upon the engineers by the person claiming to have made the discovery, is that of a portion of a ship's block at a very considerable depth in the peat or ground. Mr. Bazalgette and his assistants seem to be quite alive to the geological value of their borings into the soil of London.

BLACKFRIARS.

THE changes that have been effected in the neighbourhood of Blackfriars Bridge, within a comparatively short space of time, are nothing less than marvellous. A visit to the spot will amply pay for the trouble. The vast pile of timber staging forming the temporary bridge, story above story (the ways for foot-passengers above that for horse traffic), has a remarkable effect viewed from the old bridge, St. Paul's seen over it; and at certain times of the tide the water bubbling and boiling beneath gives an added feature. The old bridge will soon come down. In the *Gentleman's Magazine* of 1760, as quoted in the *City Press*, we are told that there was upon "a plate or plates of pure tin a Latin inscription, written at the request of the Court of Common Council, and of which a verbatim account is given." The following is an English translation. It will be seen that it contains a fact perhaps not generally known as to the naming of the bridge, worthy of notice:—"On the last of October, in the year 1760, and in the beginning of the most auspicious reign of George III., Sir Thomas Chitty, knt., lord mayor, laid the first stone of this bridge, undertaken by the common council of London (amidst the rage of an extensive war), for the public accommodation and ornament of the City, Robert Mylne being architect. And that there might remain to posterity a monument of the City's affection to the man who, by the strength of his genius, the steadiness of his mind, and a certain kind of happy contagion of his probity and spirit (under the Divine favour and fortunate auspices of George II.), recovered, augmented, and secured the British Empire in Asia, Africa, and America, and restored the ancient reputation and influence of this country, amongst the nations of Europe, the citizens of London unanimously voted this bridge to be inscribed with the name of William Pitt." Although the citizens did vote this, it is now quite clear that the intention was not carried out. Blackfriars Bridge it always has been called, and always will be in all future histories.

The Railway Bridge, of which, as well as of the proposed new Blackfriars Bridge, we have already given illustrations, is making very rapid progress. The north and south abutments, it may be mentioned, are built of the stone that formed part of the old bridge at Westminster.

The Blackfriars station of the London, Chatham, and Dover Railway Company, opened for traffic on the 1st inst., was arranged and carried out for the Company by their engineers, Mr. Joseph Cubitt and Mr. T. Turner; the architectural department having been intrusted to Mr. John Taylor, junior, architect. This station comprises two levels, the lower being entirely appropriated for a goods' depôt, the upper for both goods and passengers. The main portion of the upper or passenger level is carried upon iron columns and girders.

The approach to the booking offices is by an inclined road commencing in the new street to the east side of the station. There are three passenger platforms which, with their lines of rail, are included under one span of roof. There is a cab and carriage road to the arrival platform, commencing on the south side of the new street, where it adjoins the Blackfriars-road, and is carried by an inclined road on arches alongside the high level viaduct, and thence over the new street by girders to the platform. An entrance and exit for foot passengers are provided at the north end of the station, near the bridge, communicating by staircases with the platform and offices.

The arrangements for the goods traffic, which has to be passed from the high to the low level, and *vice versâ*, are by means of hydraulic lifts. The goods level has direct communication with the River Thames, so that goods can be landed or embarked readily.

The building, though larger and more important, is similar in style and character to the stations at Clapham, Herne Hill, Camberwell, Brixton, Dulwich, Penge, Elephant and Castle, &c. The general features and architectural effect having been left to an architect, under the supervision of the engineers, an architectural effect, with character and uniformity, has been produced, giving an example to other railway companies, much needed in the present day. As respects construction, novelty is observable in the free use of terra-cotta ware, not (as is too frequently the case) in imitation of stone where frequently that material is more applicable, but as a superior brick construction, the whole being built in and bonded with the bricks. There are horizontal moulded drip bands of brown stoneware, a material hitherto used for drain pipes on account of its durability, but now made to prevent the discolouration our London buildings too soon undergo. The colour of this material is a good brown, which contrasts well with the blue Staffordshire ware.

An opportunity has been afforded the architect of carrying out this peculiar treatment of these materials, in which he is protected by patents, and the result must be described as satisfactory.

The station which the company has commenced at Ludgate-hill will be of the same character. The ground is cleared for the line, and in a few weeks the iron bridge will be in its place.

POISONOUS PLAYTHINGS FOR CHILDREN.

WHEN a few children are killed by the mixture of some poison in sugar-sticks, brandy-balls, peppermint-sticks, marshals' staffs, pink ladies, and fifty other confections, that children are better acquainted with than the writer, a coroner's inquest is held, and for a time the unwholesome materials are disused, and the sweetmeats are made more wholesome, although they are less brilliant to the eye. But, besides the articles above referred to, other poisonous snares for children beset them in all directions. It is extraordinary what a great want of common care and knowledge is shown by thousands who have the charge of children, and whose duty it is to protect them from these and other dangers. Amongst those matters which require attention, are the colour-boxes which are provided for the use of children. We have some of these before us of several prices, ranging from 1d. to 6d., and 1s. 6d., and in nearly every instance the colours are composed of the most poisonous preparations of lead and other dangerous minerals: amongst these are the various shades of green, a small portion of which will destroy life. Infant artists are almost invariably addicted to the bad practice of putting both paints and brushes into the mouth; and, in consequence, we have disordered stomachs, which often can in no way be accounted for; and there is no doubt that by this means promise of future excellence in art is sometimes nipped in the bud.

It is the same with other toys. The younger the child, the stronger is the impression that all playthings are good to eat; and this predilection should be especially borne in mind in the preparation of toys. It is, therefore, the duty of the custodians of children to repudiate all toys decorated with poisonous colours, especially when these can be removed by sucking. Persons may daily see india-rubber balls which have been thickly covered with coatings of vermillion and chromates of lead, which can easily be removed by the mouth or damp fingers: these are solid balls; but, some time since, the death of some children was traced to poisoning caused by the coloured gutta-percha air-balls. After the mischance referred to, the coloured balls went almost entirely out of the market, and the clear transparent balls came into general use. Now we perceive that the poisonous tinting of the inside of these balls is again making its appearance, and we fear that the coroner's inquiry respecting these articles will be called for again before long; for it is the practice of the little boys and girls, when the air-balls have burst, to tear the materials into pieces, to moisten the portions in the mouth, and form little balls, which they cause to explode. In doing this, the poisonous colouring is often swallowed, and in certain instances sickness and death take place. In many other ways there is danger, to a greater or lesser extent;—as one instance, in the little coloured prints, which are cut up and put into books and pricked in a lottery: the children who win have a practice of wetting the pictures with the tongue, and transferring the objects represented to the back of the hands, face, &c: during this operation, a considerable quantity of the paint (which is of a description similar to that in bad colour-boxes above referred to) is swallowed, and the consequence is, that from this cause we have more unaccountable sickness.

In the Noah's arks, in the farm-yards, in the bright green coats of the Foresters, and in fifty other ways, there is danger to the lives and health of children. Now, there is no necessity for this. To a large extent vegetable colours, which are very telling and harmless, might be selected and used instead of the mineral preparations. In the Swiss toys this provision is, to a considerable extent, attended to; and, with taste, cochineal, indigo, and various yellows and siennas are used with good effect, and *can* do no damage.

Often the eye, as well as the stomach, is deranged by ill-coloured toys: we have seen some so horrible in their want of harmony, that it has been a matter of pain to look at them. This fault, we fear, can only be very gradually removed; but, as regards the preparation of poisonous toys, when death can be shown to have resulted from the use of them, the persons who are implicated in their sale should meet with due punishment.

UTILISATION OF METROPOLITAN SEWAGE.

THE Select Committee appointed by the House of Commons to inquire into the best means of utilising the sewage of the metropolis have had farther examinations of witnesses on the subject.

Mr. Tom Taylor, the secretary to the Board for carrying out the Local Government Act, was one of them. After giving a general summary of the provisions of that Act, he said, in reply to questions, that the Local Government Act only applied to single towns, and the only approach to combined action was a provision giving local boards in a district the power to unite in any operations if they chose. There were only two alternatives, either to drain the sewage into rivers (which was clearly illegal), or to deodorise it and utilise it for the land. There was no public authority entrusted with the duty of seeing that the law which prohibited the defiling of streams was carried out. It was left entirely to private persons interested to seek for injunctions. If an Act were passed creating boards for each watershed, and giving them power over the whole draining stream, no doubt that would tend very much to carry out drainage operations without polluting the streams. As far as his own opinion went he was decidedly in favour of a general Act applying to the whole country. He thought that some stringent legislation was necessary to prevent streams being fouled. Experiments were now being carried on for the utilisation of sewage which would be very interesting—at Croydon, for instance. He was aware that at Leicester great expense had been gone to for experiments which had been failures. Perhaps until further experiments had been made it would be hard to force local boards to dispose of their sewage on land.

He was decidedly against reverting to the old system of cesspools, nor was he aware of any project for constructing cesspools on a new principle which would meet all the difficulties. The Board of Health had no power of compelling local boards to carry out their functions.

Mr. Rawlinson, C.E., principal inspector in the Local Government Act Office, said, in reply to questions, that, in cases where sewage was allowed to flow into a river, it formed a sort of putrefying bank in the river, which was certainly injurious to health, though not so bad as it seemed. He knew of cases in which the beds of rivers had been silted up 10 or 15 feet by this

kind of deposits, and there were bridges, under which a dog could not creep now, under which living witnesses had seen a cart and horses driven. This was a most suicidal policy. In London we drank the sewage of about 800,000 people. No doubt sewage, by being passed along an open stream, and greatly diluted, lost much of its noxious power on the air, but how far it affected health he could not say. The process employed at Tottenham, Croydon, and Leicester for deodorising and utilising sewage had completely failed. Several rivers ran into the Thames which received the sewage of numerous towns. The Wandle, for instance, received the sewage of Croydon, Mitcham, and Carshalton: the Ravensbourne, also, drained several towns.

He did not believe that the existing laws were strong enough to prohibit the fouling of rivers. In order to secure this object there must be some combined action over each watershed, by means of a local board, or some body of that sort, and he would give them Parliamentary powers, something resembling those given to railway companies. To the best of his knowledge, Croydon and Horde are the best instances of the successful distribution of sewage without the pollution of a stream. He understood that the manure produced was worth about 1*l.* per acre, and the water, when it entered the Wandle, was purer than the river itself. The Manchester corporation spent about 20,000*l.* a year in removing the contents of middens and cesspools, and they got about 50 per cent. of that back again. He knew of no case of a successful application of sewage in a dry form. He was decidedly opposed to any legislation which would prevent towns from removing the putrefying matter in cesspools.

If any company were formed for the purpose of applying the sewage of London to agricultural purposes, and were to give any such price for it as he had seen suggested, he would venture to predict that that company would soon be in the Bankruptcy Court.

No doubt, the introduction of the water-closet system had been very injurious in the pollution of rivers. The cesspool system was very injurious to health. At Ashton-under-Lyne a plan was in operation for deodorising the fœcal matter in cesspools, but he was not aware with what success. Still, it would not be applicable to a great town like London. The water-closet system was bad for the rivers, but towns which possessed them were infinitely more healthy than those under the cesspool system. Health was the first consideration; and he contended that sewage ought to be got rid of, even though the rivers were fouled, or if large expense were incurred in converting it to agricultural purposes. He had examined the water in the Thames above tide-mark, and had found it pretty pure in dry weather; but when there was a freshet the water came down in a turbid muddy condition. The great thing was to carry off the sewage-water rapidly, without allowing it time to ferment: it was the fermentation which did all the harm. He was sure that town sewage properly deodorised might be put on land, and no offensive odour would be traceable half an hour after its application, and he believed there would be no injury to health. Any attempt to sell the sewage of London at a large price would be a fallacy, and would throw the question back, as the Leicester failure had thrown it back. About 30,000 acres would be required for the London sewage.

LEICESTER SQUARE: SABLONIÈRE HOTEL.

A NEW impulse to the improvement of this central part of the metropolis has been set in action by the purchase and proposed renovation of the freehold property which embraces the whole south-east angle of the square, part whereof consists of the hotel most frequented by foreigners. For a long time this square has been sinking in public estimation. The trees and shrubs which luxuriated there so lately as 1830 have been devastated; the Royal equestrian statue has been mutilated; the rail fence broken up; and this pleasing largo in the vitals of London has become a by-word and disgrace to the residents, and therefore to the whole City. Often has the *Builder* referred to the subject in the hope of redressing so palpable a blot and deformity. Yet, notwithstanding the recent Act of Parliament empowering vestries and communities to embellish public squares, but little has been done to redress the disgusting ruin. Nevertheless, the concentric position of the quarter, coupled with the attractions of a convenient and well-directed hotel, on the continental system of moderation and comfort, has continued to retain the custom of that nation with which our associations are most intimate, and our habitudes most congenial.

The Alhambra Palace, a building of superior pretensions, was erected several years back, close to the site of the hotel, on the east side. Several large magazines of trade have long flourished on the *north* side; but the intrusion of a shapeless exhibition in the centre, and the conversion of the whole garden area into a laystall; placed fatal barriers in the way of all further improvement. Now, however, a company of respectability has purchased freehold property adjacent to the Old Sablonière, and proposes to erect a structure sufficiently ornamental in the exterior, and upon a scale of extent that may confer a character suitable to this favourite resort of our French neighbours. Their peculiarly national taste for hotels, comprising luxuries, comforts, and freedom, found in restaurants *à la carte*, cafés, and, above all, the *table d'hôte*,—and all these combined with moderation of charge and rates suited to the discretion of all comers,—should such a policy be adopted, will not fail to appreciate and support an establishment which has hitherto, upon a much smaller scale, commanded their preference, despite the deplorable condition of what was formerly the ornamental foreground of a Royal palace.

The growing importance of the district between the Hungerford Grand Railway Junction and Piccadilly, the proposed enlargement of the National Gallery, and the spacious new street conducting direct thence to Tottenham-court-road;—all these demand a thorough reform and expurgation of Leicester-square. Besides that, the influx of foreign visitors, annually increasing, requires the establishment of such an hotel as the plan of Mr. Whichcord, architect, proposes for the company.

LADIES' SANITARY ASSOCIATION.

THE *conversazione* of this excellent association, held on Tuesday evening last in the Conduit-street Galleries, passed off very successfully. Lord Ebury presided, and was supported by Lord Shaftesbury, Mr. Hanbury, M.P., the Hon. Mr. Cowper, M.P., Mr. Chadwick, and others, the Hon. Mrs. Cowper, Lady Ebury, and a host of other ladies assisting. Mrs. Balfour read the report, to which we shall return; and some very agreeable music by Madlle. F. Lancia, Madlle. Sedlatzek, Miss A. Atkinson, Mr. Horace Bennett, &c., closed the evening after some excellent addresses. The exertions of the ladies who direct this association are above all praise. The galleries were crowded.

THE BATH SCHOOL OF ART.

A PUBLIC meeting was recently held in the council-chamber of the Guildhall, under the presidency of the mayor, "to take into consideration whether steps shall not be taken to re-establish the Bath School of Art upon a more permanent basis," the committee being "anxious that one of the most useful of our institutions should not be closed without an effort being made to enlist public support in its behalf." The attendance, at the hour announced for commencing the proceedings, was very limited; but as the evening advanced the room became pretty full. Mr. Henry Cole, C.B., of the South Kensington Museum, attended to give his advice in the matter. The mayor, in opening the proceedings, said the object of the meeting was no less than to prevent the extinction of the School of Art in Bath. Mr. Cole, in course of his remarks, said they had 52,000 people in Bath, all more or less well off; and he should feel ashamed of having been born in Bath if they allowed the School of Art to go down. In conclusion, he appealed to the citizens to give their mayor and corporation no peace until they had a School of Art in Bath equal to any in the West of England. The following resolution was unanimously carried:—"That the attention of the inhabitants of Bath be called in every possible way to the discredit and disadvantage which would accrue from the extinction of the School of Art in Bath; and that, with a view to placing this institution on a more permanent and satisfactory footing, by providing better rooms, and other means, an immediate effort be made by all classes to pay the debt of about 60*l.* which has been allowed to accumulate."

BOOKBINDING.

LECTURES, SOUTH KENSINGTON MUSEUM.

AN interesting lecture on bookbinding, from its earliest date to the present time, was given at the South Kensington Museum, on Monday, by the Rev. James Beck, when some beautiful specimens of the bibliopegistic art were exhibited. The lecturer appears to have studied the subject *con amore*, and seemed equally at home whilst descanting on the gorgeous bindings bestowed by the monks of old on the service books of the Church, which were adorned with sculptures of gold, silver, and other metals, richly ornamented with enamels, ivory plaques, and precious stones; or whilst pointing out the beautiful coatings of Grolier, Maioli, Laurinus, Canevari, De Thou, and the innumerable collectors of the sixteenth and seventeenth centuries, including popes, cardinals, bishops, abbots, and simple monks; emperors, kings, princes, and noblemen of all nations; authors of every denomination, who seem to have vied in decorating their lucubrations for their patrons or their own private use; or the host of amateurs who, since then, for the sake of show, have left specimens of binding executed by Le Gascon, Dusseuil, Padeloup, Derome, Simier, Capé, Montagu, Baumgarten, Roger Payne, Lewis, Clarke, Bedford, and other celebrated manipulators of leather and gilding.

ST. ALBAN'S.

A CORRESPONDENT writes:—The thick and clumsy old wall that skirted the right of the paved pathway leading from the Clock-tower of St. Alban's to the north chancel door of the famous Abbey of the mitred abbots of the town, has been carted away, and a tall and handsome and not inappropriate semi-Gothic railing (one, however, that Pugin would have pilloried in his famous Contrasts), is on the eve of "reigning in its stead." The rail is wrought at Oxford, and the ironmongers of St. Alban's (the three principal shops in the borough are ironmongers') are in a "white heat" at being overlooked by their worthy rector on this occasion. "Why," they exclaim, "go to Oxford, when the work wanted could be done as well in St. Alban's?" They do not add, however, as *cheaply*; and that must always be a point for full consideration when a work of necessity (and this is nearly such) has to be paid for out of small means—the proceeds, we believe, of tickets to see the Abbey. We may here mention what guide-books and handbooks do not tell us (not even Mr. Davis, the glib-tongued and well-informed verger who shows Duke Humphrey's tomb to hungry hundreds), that the beautiful north door of the chancel (to which this iron railing leads) was copied by Horace Walpole for Strawberry Hill. The *copy*, we may add, thanks to Frances Countess of Waldegrave, is still to be seen in its old place and duty. "The great door of the gallery at Strawberry Hill," writes Horace Walpole, "is copied from the north door of St. Alban's, and the two smaller are parts of the same design."

THE WORKING CLASS INDUSTRIAL EXHIBITIONS.

THE promoters of the South London Working Class Industrial Exhibition contemplate having another Exhibition, to commence on the 1st of February next, and continue open for a month, at an admission fee of 2d., and for children half-price; season tickets, giving admission once a day, 6d.; exhibitors free. They have issued a printed list of suggested rules and regulations, including the subjects to which prizes will be given, and which are of a very miscellaneous description, such as to inventions for saving or preserving human life, whether by sea or land; for stimulating the production of good and cheap food; the increase of social happiness, and sanitary advantages; toys, games, &c., either for indoor or outdoor amusement; general building or engineering purposes; articles peculiarly ingenious, ornamental, or curious; also for models, statuary, drawings, etching, and designs (whether for patterns or in architecture); and even literary productions or music. Prizes will also be given for skill in execution and excellence of workmanship. No prize will be more than 20*l.*, or less than 2*l.* for men; or more than 10*l.* or less than 1*l.* for women, apprentices, or youths; and no article or *fac-simile* of the same shall be eligible

for a prize which has already received that distinction from previous exhibitions.

The promoters of the North London Exhibition called a general meeting, in the parish of St. Luke, in favour of the object in view, at which a resolution pledging the meeting to support the movement and assist in its promotion was unanimously passed.

PARIS.

THE erections, as far as they have been carried, of the so-called Palace of the Universal and Permanent Exhibition at Auteuil, were to have been offered for sale by public auction on the 25th of last May; but the sale was postponed until the 27th of next July, to allow time for an arrangement of the separate rights of the proprietor of the land, M. Erlanger, a banker at Frankfort, and of the contractors for the building, Messrs. Viboux & Co., of Colmar. The land is valued by M. Erlanger at 3,300,000 francs; and Messrs. Viboux & Co., after expending 8,000,000 francs, or thereabouts, towards the construction of the edifice, have become bankrupts.

The so-called palace has much the same appearance that it had a year ago. Its extreme solitude from the total absence of workmen renders it almost as melancholy a picture as the city of Pompeii, with its fragments of walls and roofless buildings, extending here over a surface of two acres more than the London International building of 1862.

All the walls are now completed of the Pavillon de Flore, at the Palace of the Tuileries, and it is ready to receive the roof: the portion of the gallery adjoining which leads from the palace to the Louvre, and was taken down, is now completed and roofed. It advances nearly 10 feet beyond the line of this gallery, and appears to be intended for inhabitation, from the numerous windows in the several stages; but it completely destroys the unity of design of the north and south sides of the courtyard of the Carousel.

At the new Théâtre du Chatelet, a gilt trellis-work has been placed on the stage, between the foot-lights and the performers, to obviate any chance of combustion to female dresses.

WYGGESTON'S HOSPITAL COMPETITION, LEICESTER.

THE exhibition of the designs sent in for this hospital is now closed. There were some sixteen designs sent in under motto, but somehow quite half of them were known, and the authors openly talked about in the room. Yet worse than this, on the first two view days, when the drawings were only open to the private view of the trustees and their friends, some of the local competitors were stationed by their drawings, explaining them to the visitors as they passed round; and these are amongst the selected favourites of the trustees. It is to be hoped that architects from a distance will be cautious of future competitions in Leicester, when local favourites are supplied, in this questionable manner, with tickets of admission, by the trustees or the secretary, for the private views of themselves and friends.

There are six designs selected for future adjudication, when Mr. Brandon will be requested to assist the committee. These six are as follows:—"Desideratum," Messrs. Kirk & Parry, of Sleaford; "Spes et Fides," Messrs. Goddard & Son, of Leicester; "Commissio," Mr. J. King, of Coventry; "Wyggeston Arms," Mr. Millican, of Leicester; "Melton," Mr. Giles, of London; W., within a circle, Mr. Ordish, of Leicester. The stipulated cost is 15,000*l*. The cost of some of the selected would surely far exceed this?

IPSWICH TOWN HALL COMPETITION.

THIS competition appears to have resulted in a dilemma. The town council issued an advertisement, offering two premiums,—the one of 100 guineas, and the other of 50 guineas,—for the best and second best designs which might be sent in, and referred architects intending to compete to the town clerk for instructions, which contained a statement of the rooms and conveniences required, and the minimum area for each room. For instance, the council chamber was to be of a minimum area of 2,100 square feet; the sessions court of the area of 1,000 feet; the upper museum of 2,500 feet; and so on. When the committee came to examine the plans which were sent in for competition, twenty-eight in number, they found that no less than sixteen of them, and including some of the best designs in every respect, were deficient in the amount of accommodation they afforded. Those sixteen were set on one side as not having fulfilled the conditions of the competition, and the committee selected the best and second best out of the remaining twelve; but on referring these to the surveyor, that officer reported that there were faults in them which rendered it impossible that buildings could be erected in accordance with them. Another selection was made, with a similar result as far as one was concerned; and, eventually, the committee determined to recommend two for the premiums, viz., that with the motto "Virtus in Ardnis" for the first, and "Voilà" for the second.

One of the conditions was that the building should not be Gothic; and the consequence is that the designs are mostly Italian, and there is a certain general resemblance in many of them. The most prominent feature in the majority is a clock-tower, placed either at the corner next King-street, or over the central entrance. The majority of the designs are of poor character.

The council have confirmed the selection of the committee, and awarded the premiums to the designs named; but it was stated distinctly at the last meeting that neither of these would be adopted. A design marked "Alpha" was advocated by some members of the council, but has several striking defects. Another meeting was determined on, and the designs were thrown open for public inspection.

THE NEW MARINE-STORE-SHOP REGULATIONS.

A MEASURE we have long advocated, and which, if properly carried out, will prevent a large amount of juvenile crime, has passed the Legislature, and is now in operation in the metropolis. This is the application of new regulations as regards the management of marine-store shops, which have long been a danger and a snare to youth of both sexes. The law now demands that these places of business must be registered by the police, who have power to inspect them at any time. The good character of persons entering the trade must be known; the names of the proprietors, whether male or female, must be carefully and plainly placed on the front of the premises; and the person so named is responsible for the transactions of persons employed. No purchase is to be made from any one who is under the age of sixteen years; and questions must be asked whether or not the property offered for sale belongs to the party who brings it, and a satisfactory account is to be had as to whence it has been brought and that it has been honestly come by. Every article must be described, and entry of its price, date, and hour of sale made in a book kept for this purpose, and which is open to the inspection of the police, or to those who can give satisfactory reason for inquiry.

There are other provisions which to a considerable extent will prevent the operations of the receivers of stolen goods. In this case Parliament has shown a wise discretion and performed a useful duty; and it depends upon the authorities at Scotland-yard to use the powers which they now possess, by stopping the temptation, to save many hundreds from dishonesty and disgrace.

It is probable that the changes which have been made in the law will lead to many alterations in the manner of managing this business, which, taken as a whole, is of great extent and importance; and it is thought that a better class of persons will be brought into it; but, whether or not, there will be increased opportunities for the extension of the labours of the rag-collecting brigade—which we hope will not be overlooked—in the localities in which several of the old shops may probably be discontinued; for the enforcement of this enactment will render many unprofitable.

The magistrates must in this matter assist the police; and it will soon cease to be a common occurrence to read in the newspapers terrible accounts of poor children of tender age, whose heads are not high enough to look over the docks, accused of thefts, which they have been encouraged by dealers who are old in vice to commit. Of course, there are many honest keepers of marine-store shops, but, as a rule, the places have been productive of evil.

FROM SCOTLAND.

Dundee.—The new works at the harbour are progressing. The east wall, for nearly three-fourths of its length, has been entirely rebuilt; and the north wall is almost all founded. At the east and west ends, the wall has been brought up nearly to its full height, and, at the present rate of progress, will be completed in a month. A portion of the west wall has also been rebuilt. The rebuilding of the lock wall is delayed until Mr. Abernethy can examine the foundation. Meantime every effort is being used to discover the source of a stream of water which at present flows from beneath the foundation of the cill of the lock.

Airlie.—At a recent meeting of the Society of Antiquaries of Scotland, among the papers read was a notice of antiquities in the parish of Airlie, Forfarshire, by Mr. A. Jervise, of Brechin. Mr. Jervise gave details of the excavation of a sepulchral mound near the church of Airlie, known as "St. Medan's Knowe;" and concluded with an account of an eirde or Pict's house, on a height about a mile distant from the Knowe. The weem is about 67 feet in height, its average breadth about 7½ feet, till near the entrance, where the size is considerably contracted. The walls converge much to the top, and are covered with huge roofing flags. [Quite in the style of the sorcery halls at Maeshowe, in Orkney, and New Grange, in Ireland.] At a point about 12 feet from the entrance, a smoke-hole was visible until within the last few years. At one time, other four underground houses of this description were in the same neighbourhood, but these have been destroyed. Lord Airlie has taken steps for the preservation of the specimen still remaining.

Dumbarton.—A new Free Church, erected here at a cost of about 5,000*l*.,—4,000*l*. of which was subscribed previously to the laying of the foundation stone in May last, by the Rev. Sir H. Moncrieff,—has been opened for Divine service. The new edifice is in the Gothic style of architecture, has a spire of 140 feet in height, and it is seated for 850 persons.

Hawick.—All over the town, says a local paper, we see proofs of the unusual prosperity of trade in the extensive building operations that are going on. The extensions, additions, and improvements are not confined to one class of house property. Here we have whole ranges of workmen's houses rising with mushroom rapidity: there we see the warehouses of flourishing merchants doubling their dimensions: in one locality we watch many-windowed factories rising in imposing masses along the river; and around the suburbs various new, large, and beautiful residences testify to the prosperity and enterprise of our merchant princes. Only one thing detracts from the general satisfaction at the activity of the building trade: the Corn Exchange, of which so much was hoped, and which is so greatly needed, remains *in statu quo* it was left by the recent unfortunate collapse of its foundation arch. The most attractive houses at present in the hands of the builder are the villas of Provost Wilson and Mr. Thomas Laidlaw, manufacturer. The former is more imposing than elegant. "Sillerbet Ha'," the future residence of Mr. Laidlaw, must be familiar to those who inspected the pictures shown in the last exhibition of the Royal Scottish Academy. Its style is diversified, and its outline irregular. It is traced with belts of sculpture, and has sloping French roofs, a rounded dome, turrets, and minarets.

IRELAND.

National Bank, Roscrea.—A new branch office of the National Bank now approaches completion. The planning provides spacious accommodation for the transaction of the public business in a well-lighted room 40 feet by 22 feet 6 inches. The chaste character of the design, which is Classic, both in the exterior and interior, will be a good addition to the ornamentation of this rising town. It will, on completion, cost about 2,000*l*. Mr. W. F. Caldbeck, of Harcourt-street, Dublin, is the architect.

Drogheda.—On Tuesday, the 24th May, in this well-known seaport, was laid the foundation stone of a new town-hall, called, in honour of its founder, the Whitworth Hall. He it was, as may be remembered, who some short time since offered to guarantee half the cost of new waterworks for the supply of good water to Drogheda. For this building a limited competition was invited, premiums having been offered. The accepted design was

that of Mr. Barre, architect, of Belfast. The design is of considerable merit, and provides a great hall and assembly-room, 80 feet by 42 feet, and 36 feet high to ceiling, with a gallery 16 feet deep, appropriated to an orchestra or platform, occupying a central part, having the required retiring-rooms for performers; with cellars for storage of seats and other effects. It will accommodate 700 persons. Placed conveniently at the entrance are commodious waiting-rooms, reached from the principal entrance and vestibule. On the upper floor is a minor hall, such as may be required for council meetings, lectures, chamber of commerce, or library, balls, &c., 42 feet by 20 feet, lighted by three large windows in front, and 20 feet high. In the basement are a coffee-room and a smoking-room, communicating with each other, and capable of being opened into one by a movable partition. Here are apartments for porters and housekeeper; also a kitchen sufficient for the entire establishment. The ground-floor is about 6 feet above the street-level, and is reached at the front entrance and through the vestibule by two easy flights of six steps each. From these the principal stairs conduct to the upper floor; portions of the basement are approached by external steps in the front areas, whence also are lighted the front rooms of the basement. The ultimate cost will be about 3,000*l*.

DISCOVERY OF ANCIENT CELTIC REMAINS IN IRELAND.

AN interesting discovery of an ancient Celtic necropolis, has been made by Mr. E. A. Conwell, of Trim. The remains are very extensive, and are situate on the peaks of Hag's mountain, as the hill of "Slieve na Calliagh," near Oldcastle, in the county of Meath, is called. Mr. Conwell read a paper on the subject before the Irish Royal Academy, of which he is a member. Some of the numerous cairns, he said, are yet unopened and uninjured. The stones, however, had been partially removed from most of the smaller ones, for fences, thus leaving exposed some of the interior chambers, the flag-stones forming which had been found *engraved with very curious devices*, rubbings of which Mr. Conwell submitted to the inspection of the Academy, together with enlarged sketches of various descriptions of chambers, and a general field plan of the present appearance of the place, and the relative positions of the cairns. The three largest, measuring each from 120 to 190 yards in circumference, and from 20 to 30 yards in height, had yet to be explored. He urged the thorough and systematic examination of the place under the auspices of the Academy. Various other tumuli and some very curious subterraneous caves, in the immediate neighbourhood of Slieve Calliagh, were also described. Mr. Conwell quoted extracts from the "Book of Ballymote," "Annals of the Four Masters," Keating, Dr. O'Donovan, and Professor O'Curry, to show that this ancient Celtic burying place, "on the confines of the Kingdoms of Meath and Ulster," exactly corresponds with all the descriptions possessed of the greatest of all the ancient royal cemeteries of Ireland,—Brugh; the precise situation of which, he said, had not hitherto been satisfactorily established, but which had been erroneously supposed to be near Stackallen. Objections, however, were made to Mr. Conwell's idea, in the discussion which followed.

PROVINCIAL NEWS.

Sheffield.—At a meeting of the shareholders of the Sheffield Music Hall, it has been resolved to adopt several improvements in the arrangement of the minor rooms in connexion with the main hall. These alterations are to cost a sum not exceeding 2,200*l*. At present, a broad passage runs by the side of the Literary and Philosophical Museum: this passage is to be abolished, and the large space it now occupies is to be thrown into the hall of the Museum, which hall it will nearly double in width. The main staircase is to be made larger, and is to be approached by a broad corridor, the staircase to be about as broad again as it now is. The Museum will, we believe, be lighted by a dome light, and will have a gallery round its upper end, as well as an independent entrance of its own apart from the great staircase which is to serve for the main hall. Another reading-room is to be substituted for the existing one, and the present reading-room will be removed to give space for the heightening and top-lighting of the Museum. A saloon or assembly-room, with all the requisite conveniences, is to be made both at the back and at the front of the chief room. Other alterations are also to be made. The architects are Messrs. Hadfield & Son.

Ironville.—In addition to the extensive iron works at Codnor Park, says the *Derbyshire Advertiser*, and the immense new rolling mills recently erected, and now in full operation, the works having been much extended, the company have erected a considerable number of houses for their workmen; and, with their accustomed liberality to provide for their comforts, they have also commenced new baths, lodging-houses, and institute at Ironville, from plans prepared by Messrs. Stevens & Robinson, architects, the cost of which will be about 4,000*l*. Mr. J. W. Thompson, builder, Derby (who built the rolling-mill, and who obtained a premium for the way in which the work was done) is the contractor for the work.

THE BUILDING TRADES MOVEMENT.

Neath.—The carpenters and joiners here have applied to their respective employers for an advance of wages.

Wolverhampton.—The master builders having held a meeting, and come to a unanimous resolution to the effect that if the labourers in the union who gave notice to certain masters for a rise of wages, did not withdraw that notice, there would be a lock-out at all the master builders' yards in that town; this resolution they have since carried out: building operations, were therefore brought to a standstill. The bricklayers also have resolved to give a three months' notice, on an early day, for a rise of 2*s*. a week, making 28*s*.

Tamworth.—The bricklayers here belonging to the trade society have refused to work without a rise of 2*s*. per week. One master has agreed to the demand. Labour is now much wanted.

Coventry.—The labourers employed in the building trade in Coventry, following the example of their fellow-workmen in other towns, have struck for an advance of wages. The men complain, that while in other towns builders' labourers are being paid from 18*s*. to 1*l*. per week, they are only getting 15*s*. They, therefore, ask for an advance of 1*s*., but at present their demand has not been acceded to. A meeting of masters and labourers was held, but no satisfactory arrangement was arrived at. The men express their determination to continue on strike until the advance is given. There are several important building contracts on hand, and a greater demand for labour than has been experienced for some time past.

Leicester.—The labourers' demand for 3d. per day has been given to all. The bricklayers' demand of 4d. per day has also been given generally to all the men. The carpenters and joiners have asked for 4d. per day advance, to commence in July. The stonemasons have sent notice requiring 6d. per day advance in August. The plumbers and glaziers have asked for 6d. per day advance, in July. Farriers and smiths have asked for an advance, and the plasterers have also intimated that they shall try what they can do.

Stockport.—Following the example of other towns, the joiners of this borough have made application to their employers for certain concessions, which, if not agreed to, would be followed by a strike. Their demands include both an advance of wages and an abridgment of the hours of labour,—*i. e.*, an increase from 26*s*. to 28*s*. per week; and to commence work at seven instead of six o'clock on Monday morning, and to have the "pay-table" at one o'clock instead of half-past on the Saturday. The masters have had a meeting on the subject, and, we understand, are quite willing to concede the advance, although deprecating the proposed alteration of time.

Doncaster.—A meeting of joiners and others engaged in the building trade in this town has been held, to consider the decision of the master builders to advance good workmen 2*s*. per week, from the 1st of July next. The master builders had previously decided to increase the wages of men in their employ 2*s*. per week, but only to first-class workmen. This was regarded with dissatisfaction, and it was unanimously agreed to appoint a deputation to wait on the masters, and point out that the proposed 2*s*. should be given to all indiscriminately, thus making the wages 24*s*., instead of 22*s*., as at present.

Malton.—The strike at this town is about at an end. Most of the men have returned to work at the old wages, except in a special case or two; and the chief instigators to the disaffection, who were strangers, have left the town. All now seems settled, and the men are fully employed.

Sheffield.—Negotiations for an advance of the wages of the carpenters and joiners have not terminated amicably. A crowded meeting of joiners was held, "for the purpose of hearing the decision of the employers," when it was announced that a portion only of the employers had assented to the proposed advance. The men have asked for an advance of 2*s*. per week on their wages, which are 24*s*. and 26*s*. The masters suggested a compromise, offering an advance of 1*s*. per week, with some minor arrangements as to "boundary." The joiners declined to accept this proposition, and part of the employers acceded to the proposed demand. The meeting unanimously resolved to support on strike the workmen at all establishments where the advanced wages are not given. The joiners have also resolved unanimously to reject the rules submitted to the trade by the employers.

Stockton.—The bricklayers of this town have obtained a rise. They demanded 4*s*. 6d. per day, by a strike a few weeks ago, and now ask for 5*s*. per day. Some masters acceded to their request, as building is brisk. The labourers, to whom the masters refused for some time to give 1*l*. per week when the artisans were on strike, have got their wages advanced to 1*l*. 1*s*.

Scarborough.—The joiners and bricklayers at Scarborough turned out for an advance of wages. The bricklayers had 27*s*. per week, and the joiners 24*s*., and they struck for an additional 6d. per day; the bricklayers asking also to begin work on Monday mornings at seven instead of six o'clock. The strike was not in either case of long duration, and many, at least among the joiners, returned to work at their former wages, unconditionally. Trade is tolerably brisk in Scarborough, but there also appears to be a sufficient number of men for the work in hand.

Newcastle-upon-Tyne.—The mass of the operative painters are now on strike for an advance of 6d. per day on their present wages of 24*s*. per week. They allege that they only want to be placed in the same position as the painters of the neighbouring towns of Shields, Sunderland, and Hartlepool, who have had for some time past 27*s*. per week. Some employers have granted the advance.

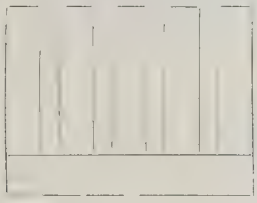
Carlisle.—A meeting of the joiners of this city has been held with respect to a proposition to ask for an increase of 2*s*. per week wages. The workmen ground their claim on the assertion that their hours of labour are longer than many other trades, and yet they are not so well paid. They work sixty-one hours per week, which they say are four hours more than the time worked by the trade in almost any other town in England. Their present rate of wages is 22*s*. per week. The meeting unanimously agreed to the proposition, and a workman in every shop was appointed to give notice to the master.

Cases of intimidation of workmen are occuring. At Liverpool, Matthew Darcey, a joiner, was brought before the stipendiary magistrate, charged with having intimidated another workman named Evans, with the view of preventing him working at the shop of Mr. Hughes. The prisoner was sentenced to three months' imprisonment.

At Stockport, seven persons with their faces blackened, belonging it is supposed to, or hired by, the Brickmakers' Union, visited the brickyard of Mr. Simpson, who employs non-union men, and, after firing several times at the watchman, destroyed a number of "green walls" or bricks in the process of manufacture, and attempted to set fire to the offices by throwing naphtha upon them; but fortunately the wood refused to burn. The watchman fired at the men, and they suddenly disappeared.

A diabolical attempt to destroy a brick-kiln by an explosion has been discovered and frustrated at Birkenhead. Eleven pounds' weight of powder had been enclosed in a piece of water-spout, with a blast fuse affixed to it, and placed within the influence of the heat of the kiln, which is close to a road, and also to the windows of St. Ann's Church. 10*l*. reward has been offered for the scoundrel who committed the act.——A fellow has been committed for trial at Manchester for attempting to destroy several cart-loads of bricks by taking out the kecker-bars from the carts,

while the carters were in a public-house, the effect of which might have been that, on moving the carts, the bricks would have all tumbled out.



NATIONAL MUSEUM, SOUTH KENSINGTON.

THE COMPETITION DESIGNS.

WE publish in our present number illustrations of Mr. Kerr's design, and take the opportunity at the same time, of recurring, as promised, to the protest delivered by him to the Government with regard to the award of the first premium to the design of Captain Fowke.* In the peculiar circumstances of this case, it may be well to let the author speak directly for himself, in the following statement.

The Government issued to competing architects, for their guidance, copies of a design for a Natural History Museum, which had been prepared two or three years ago by Mr. Hunt, the well-known surveyor to the Office of Works, under the directions of Professor Owen, who holds an official directorate over the Natural History department of the British Museum.

This model has been accepted in the present design, after due inquiry and consideration, as proving itself to be admirably well adjusted to the internal administration of the Natural History Museum. It represents the *gallery* principle, as opposed to the *bazaar* principle of the International Exhibition Building, and other instances. In a bazaar (that is, in a place of great height and width, surrounded by balconies and so on, and lighted from the roof,) natural history specimens would lose scale and importance, the casual visitor would be bewildered and the student interrupted, and the display would sink from the character of science to that of show; and these considerations lie at the root of Mr. Hunt and Professor Owen's plan, which aims at providing, as far as possible, a simple series of long parallel galleries, 40 feet wide, on two stories, with spaces between for light and air, and a basement under for stores; thus:—

In accepting this model, however, certain improvements are proposed. The intermediate spaces are enlarged into courts, about 27 feet wide, open from the basement floor level to the sky; whereby thorough lighting and ventilation are obviously secured, and the whole basement especially by these means utilized. This basement, as another innovation, is formed wholly above ground. Lastly, there is introduced a central corridor (30 feet wide), from which the galleries would branch transversely on both sides; whereby the passing crowd, which frequently becomes so inconveniently great, would accumulate in this corridor out of the way of the collection.

In the accompanying block plan the galleries are indicated by the letter G; the central corridor is marked C C; the letter S represents the position of public staircases at each end in connexion therewith; and E signifies the entrances; O being the mark for the open courts. The author claims for this arrangement the merit of a simplicity and convenience which do not seem possible in any other.

Beyond the provisions of the model plan, a number of private apartments were directed to be added as attendants' rooms; being more properly laboratories and the like, where specimens are prepared for the galleries, and revised as occasion requires. Such rooms, for obvious reasons, were stipulated to be "in contiguity" with the galleries. The letter A is used on the block plan to represent these attendants' rooms; and they are placed in conjunction with short cross corridors or ante-chambers by which persons would pass from one gallery to another at the farther end. At each of these points there is also an attendants' stair, leading down to the basement, for communication with the depositories there; and the rooms have in all cases lifts for the passage up and down of the specimens.

The letter L marks the natural history library, formed out of the upper story of the existing building which fronts the Horticultural Society's gardens. The lower story is appropriated to apartments for the directorate, &c. This library, being in floor-level about midway between the two stories of the Museum, would have the convenience of being reached from both alike by steps across the intervening space.

Th and E M signify on the block plan, the theatre and evening museum. Professor Owen, in a work published on the subject last year, advocates the liberal idea of attaching to the great natural history collection, as an adjunct for the use of the working classes, a small selection for evening exhibition. This suggestion is here followed out; and the lecture-theatre of the Museum is attached to rooms for such an evening collection, forming together a separate building. The basement story, as has already been implied, is wholly above the ground level, and is lighted and ventilated throughout by ordinary windows, so as to be suitable for the extensive depositories and unexhibited collections, &c., of the Museum.

The letter T marks the clock tower. P M indicates the place assigned to the Patent Museum as a separate establishment; here there are two stories of galleries, as before, and basement above ground for the workshops and depositories required. C H would be a future grand central hall (under the dome): and A H a future assembly hall for great scientific meetings, being at the same time a connecting link between the central hall (and state entrance) and the gardens behind.

It will be observed that the intended buildings are (according to the instructions) *confined to the eastern side of the ground*, strictly and without any compromise, and space for extension included; and the western portion is left intact for future buildings.

The question of exterior treatment was fully spoken of in the criticism of the designs generally in a former number of the *Builder*, the present design being distinguished by the motto, "Well to build is well to buy."

To turn now to the protest against the award of the first premium. As soon as possible after the announcement of the award, I delivered to the First Commissioner of her Majesty's Works a document, whose scope is most readily explained in its own opening words, as follows:—

> "There being now three selected designs before the Government, of which mine is one, I beg leave to submit for your consideration—1. Descriptive particulars of my design, which time did not admit of my preparing in the usual manner before the delivery of the drawings: 2. Certain objections to the award of the first premium to the design marked *'dà ogni uccello suo nido è bello,'* which objections I beg leave to urge against any further precedence being accorded to that design. In connexion with the second question I beg also to lay before you an explanatory sketch of my design treated as a building to cover the entire site."

The descriptive particulars are very much what has been given above; the explanatory sketch is reproduced amongst the present illustrations; and the objections to the award are in brief the following:

1. It is distinctly set forth in the conditions of competition, that "the buildings for which a design is required are to be placed on *the eastern portion of the site*." In the descriptive particulars of the first premiated design, the very first words are "The object aimed at has been to prepare a design for the occupation of *the entire site*;" and the whole scope of the design is in accordance with this idea, so that the subject becomes altogether a different subject from the one offered to competition.

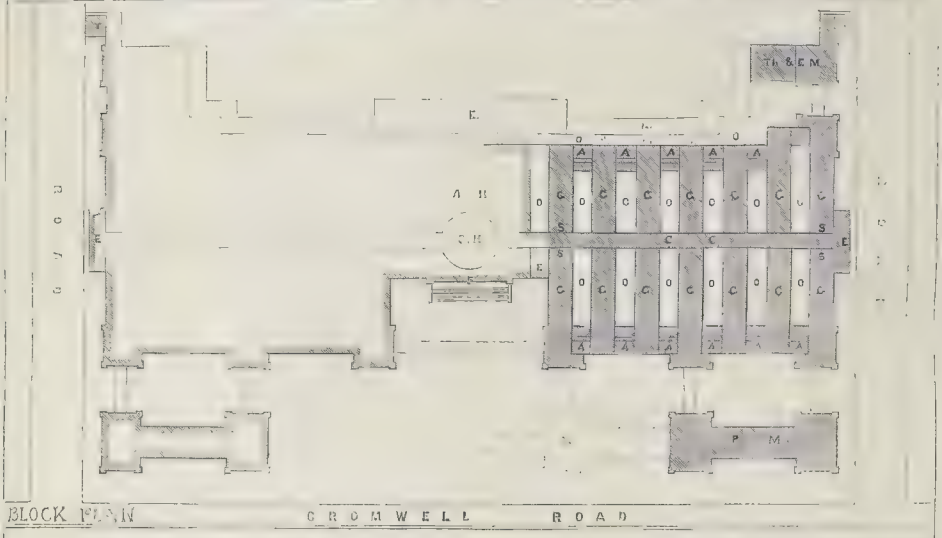
2. If it be supposed that the design meets the conditions by its eastern half being equal to the stipulated accommodation (3,280 feet by 40 feet), measurement proves that this is not so, taking the accommodation even at its minimum, and without any space for extension.

3. The gallery system of Professor Owen and Mr. Hunt has been entirely lost sight of in this design, and a bazaar system resorted to (apparently at random), which ought not to have been nominally approved by the adjudicators, in presence of the model plan, without scientific authority. Instances of the faults of the bazaar principle are adduced from the very design in question;—as in respect of the glass-cases of ground-story, which are placed under arcades and balconies overhanging them 16 feet, and lighted from 75 feet off;—the glass-cases of upper story, which stand on an immense length of balconies, 3¼ feet wide;—the obvious difficulty of ventilation by the roof alone;—the utter impossibility of lighting the basement;—and the objectionable structure of the roof (as in the condemned Exhibition building).

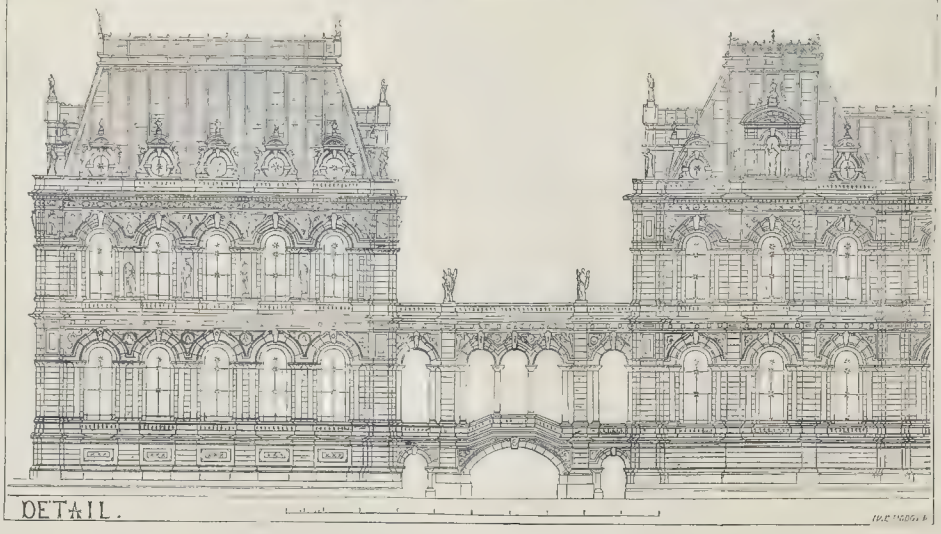
4. The further demands of the Natural History collection at Bloomsbury have not been consulted in respect of the preference of the design; there being no suitable basement depository with its appendages, and no other basement possible except a vast expanse of dark useless vaults. The attendants' laboratories also, instead of being "in contiguity" with the galleries, are 10 feet and 12 feet off the level.

5. Certain "artifices" are alleged to appear in the design, which it is contended ought to have excluded it from consideration altogether; for instance, that certain basement windows are shown (essentially) on plan, which are all omitted in the elevations and perspective view, because of their being inimical to the effect, if not impossible to be had; also that an entire basement story is given on plan to the Patent Museum, accommodating essential parts of the establishment, whereas the section shows that no basement whatever is really intended; and also that the attendants' rooms, which are as essential to the upper story as to the lower, are represented on the first-floor plan, complete in number and relation, whereas no such rooms of any kind can possibly be had on that story.

The purpose of the additional perspective sketch is the presentment of my design (otherwise unaltered) "treated as a single composition for the entire site," as in the work of my opponent, contrary to conditions. In a word, the Cromwell-road façade is made the grand basis of composition; the same point of sight is taken as in Captain Fowke's drawing (half a mile off, by the bye, through Brompton bricks and mortar, so that the effect is a mere delusion); and it becomes apparent that all that is required to change the one designer's unity of the eastern part into the other's unity of the whole is an inconsiderable shortening of the Patent Museum to the size of a wing (see the point marked * on the block plan), the stipulated accommodation for this part of the building being still provided to the full, and the plan of the Natural History Museum, as the chief of all possible considerations, being left untouched.



No doubt there will be the usual amount of conscientious difference of opinion upon these arguments: one side will allege that it is the privilege of genius to overleap formal restraints; the other will reply that it is the essence of English fair play to keep within stipulated limits. But, at any rate, the controversy involves most important questions of competition practice, upon which the result, whatever it may be, will go far to establish, either for good or evil, a weighty precedent; and it is not to be expected or, indeed, desired that in such a matter judgment should be allowed to go by default. It is one especially favourable circumstance that the dispute involves no petty grumbling against the good faith of the adjudication (although obviously implying dissatisfaction with its unexampled precipitancy); and it is plain that no struggle is desired to be set up over the bone of the money prizes. The purpose of the protest is the much more business-like intimation that, without any disrespect to the judges, or any opposition to their award so far as it goes (that is to say, to the appropriation of the promised premiums), the writer claims the position of real preference and practical honour to be his. Whether the proposal to build these museums on the South Kensington estate may ever be revived, is thought by many persons to be now somewhat problematical; but if it should be, the assertion will be revived also, that *within the conditions* the second design is the first.



ROBERT KERR.

* For illustrations and account of Captain Fowke's design, see p. 393, *ante*.

A BI-CENTENARY UNITARIAN MEMORIAL HALL IN MANCHESTER. The foundation stone of a memorial hall in connexion with the Unitarians has been laid in Manchester. The hall, as the parchment deposited states, is erected "in commemoration of the bi-centenary of the 2,000 ejected ministers who, on St. Bartholomew's Day, 1662, so nobly proved their fidelity to conscience, by resigning their livings in the English Church." The hall (says a Manchester paper), will have some pretensions to architectural beauty, and it is expected will prove one of the ornaments of the square in which the statue of Prince Albert will be the centre piece.

PROPOSED MUSEUMS, SOUTH KENSINGTON.

DESIGN FOR PROPOSED NATIONAL MUSEUMS, SOUTH KENSINGTON, TO WHICH THE SECOND PREMIUM WAS AWARDED.

PROFESSOR KERR, ARCHITECT.

THE ARCHITECTURAL ASSOCIATION.

THE usual meeting of members was held on Friday, the 10th inst., at the House in Conduit-street. The chair was occupied by the president, Mr. T. Roger Smith.

The Chairman announced that on the following Saturday (the 18th inst.), the members of the Association would have an opportunity of visiting Westminster Abbey, and that Mr. Gilbert Scott had kindly promised to be their cicerone on the occasion.

The hon. secretary (Mr. J. D. Mathews) read a letter from the secretary of the Nottingham Architectural Association, requesting that the Architectural Association would propose it as a member of the Architectural Alliance.

On the motion of Mr. Blashill, seconded by Mr. Ridge, the delegates were requested to comply with the application at the ensuing meeting of the Architectural Alliance.

The hon. secretary read the names of Mr. Christian, V.P., as president for next year, and of Mr. J. Webber for the vice-presidency, subject to election by ballot at the next meeting.

Mr. Burges then read a paper "On the Modern Development of Mediæval Art." This we printed in our last.

At the conclusion,

Some observations having been made by Mr. Seddon,—Mr. Webber observed that, from what he collected as to the meaning of Mr. Burges, the latter recommended unpolished marble in preference to polished. He feared that no polished marble (unless, perhaps, serpentine) would last long under the influence of a London atmosphere.

Mr. H. Christian said he believed that glazed tiles might be very profitably used, and that they might be manufactured without that extraordinary bright glaze to which Mr. Burges had referred. He agreed in the observation made by Mr. Webber about unpolished marble, for polished marble did not stand long without requiring scraping. He believed that majolica might be very advantageously introduced into London buildings.

Mr. Burges threw out a suggestion that the secretary of the Association might write to Messrs. Maw and Minton, asking them whether they could produce tiles without so great a glaze.

Mr. Christian suggested the use of polished Parian, which he said would stand a great deal of wear when water did not drip on it.

Mr. Webber said he had seen the tiles coloured by Mr. Minton last very well for many years.

Mr. Christian thought they must make up their minds to give up colour and depend on form in London architecture, or use glazed materials to the exclusion of all others. He did not see why polished marble might not be used in cases where it would not be directly exposed to impure atmospheric influences.

Mr. Burges called attention to the specimens of majolica shown in pieces at the South Kensington Museum, which appeared to him to realize all that was required. He believed the question of glazed tiles was one to which the attention of the committee might be profitably directed, with the view of obtaining information from manufacturers. Of all marble in combination with stone, Purbeck looked the best, in consequence of its silvery appearance.

Mr. Blashill said that highly-glazed tiles for pavements were open to the objection that they were dangerous to walk on. He had used tiles which were not so highly glazed, but he found that they soon cracked.

The Chairman, in putting a vote of thanks (which was passed) observed that he agreed in much that had fallen from Mr. Burges, and that he had himself always advocated the necessity of students paying attention rather more to building than designing. He thought that plaster might be used on flat surfaces, especially in panels, so long as the architectural features of the building were preserved; and that next to plaster, red brick might be judiciously introduced. The bricks of Mr. Taylor, used at the stations of the London, Chatham, and Dover Railway, struck him as being good; but the best material for London buildings was, perhaps, the Darley stone, which had, however, the drawback of being very costly. With regard to the present system of competition, to which reference had been made, it seemed to him that its effect was to produce good drawings, but bad buildings.

Mr. Tarver having invited gentlemen anxious to join the life school of drawings to give in their names,—

The Chairman observed that the expense would not exceed 6*l.* a month, and that it would be desirable that as many members as possible should join. He also stated that no rule had been made which would operate to exclude gentlemen from joining who were not members of the Association.

The next subject for the class of design will be a brass lectern.*

MORE STILL CONCERNING SHAMS.

You will remember that Mrs. F.'s aunt in Mr. Dickens's "Little Dorritt," on one occasion abruptly exclaims,—"I hate a fool." Although not willing abruptly to interfere with the question between "Ex Stirpe" and "Art Lover," yet I cannot help saying emphatically, "I hate a sham." As "Art Lover" says he has kept some ammunition for a future occasion, I am aware I expose myself to his fire; but as he possibly only employs a sham gun or blank cartridge, or, at any rate, may naturally be supposed to do so, in defence of shams, I hope to escape serious damage.

A lover of art should know wherein real art consists. Mere copies and imitations are but the lowest phases of art; in fact, a "species of art," to use "Art Lover's" own words, "which some folks denounce as no better than that of lying:——"

> "Some folks do—some folks do,
> But that's not me nor you."

Dr. Johnson once said "The man who makes a pun would pick a pocket." Similar ferocity would give those people who, against light and knowledge, patronize art shams, small chance of salvation when the destroying angel passes by and finds their front doors grained.

Disdaining this bigotry in art, it cannot but be matter of regret to an art-lover to witness the immense sacrifice of time and talent in the production of shams. Works of art are worthy of this time and talent, and will meet with the respect of following generations. Shams are not so. Let the object or the material be inferior as it may, one touch of originality or artistic feeling, and the work is worth all the specimens of imitative painting (I mean graining) in existence, as a work of art. Imitations of wood, marble, &c., have attained a wonderful degree of perfection,—a perfection not to be surpassed by the reality, since the sham is sometimes more like the reality than the reality itself; and it is often almost impossible to tell "which is which." "Art Lover" has quoted Hudibras, and holds that—

> "Doubtless the pleasure is as great
> In being cheated as to cheat."

There may be great pleasure in partaking of "mock turtle" (I have never tasted it); but you know and are told it is a mockery. A false set of teeth, and a wig and a cork leg, especially if combined in one individual, would not be a source of so much gratification as the natural things. In the world of art, the pleasure of being cheated is only "great" in proportion as our appreciation of real art is small. We all *ought* to prefer the true to the false; and the true *ought* to be, and generally is, more beautiful than the false. A real art-lover would surely rather bend his energies to the production of a true than a false thing. But, apart altogether from the moral aspect of the question, how lamentable that so large an amount of skill and labour, which might be art-labour, should be exercised in mimickry. A painting was once shown to Sir Joshua Reynolds as a marvel of art, in the production of which the artist had whimsically only employed his fingers. Instead of joining in the admiration, Sir Joshua remarked, "Why didn't the blockhead use his pencils!" Whenever I see some wonderful imitation,—knowing, when I see it, that there has been an exercise of ingenuity and patience worthy of a better object,—that the mere fingers of barbarism (of course this is only figurative, and must be taken for what it is worth) have been busily employed when the pencils of art, and the skill to wield them, were at hand, the thought naturally forces itself upon the mind,—"Why didn't the blockhead use his brains." I do not say that the man who so beautifully imitates the natural grain of some wood, or vein of some costly marble, on a door or pillar, is a blockhead *per se*, or even because he is doing the work which he may be directed to do. Often we architects are the blockheads. If half the labour that is employed in graining and imitations were employed in *decoration*, a better effect, at less cost, would be the result.

I hate shams because I love the arts. A painting is not a sham: a statue is not a sham: mock turtle is not a sham (nor a fine art); for they all tell us what they are. But in the construction of a building, when stone pretends to be wood, deal oak, plaster stone, &c., the art displayed is of a low order, at very dear cost, however cheap; for its natural tendency is not to refine or to elevate, but only to cause blank wonder or blank contempt. Both "cheap" and dear shams are contemptible as works of art. But, then, to talk about cheap—or at any rate economical—shams, is nonsense. No sham is economical. To parade and protrude shams as works of art, and as being saving to the pocket, is only deceptive and disgusting. Of course, it by no means follows that all truthful works of art are beautiful; but I put it to any reasonable man that they are far more easily made beautiful than shams. Those who deal in and perpetuate shams, and those who prefer them to reality, are perhaps more to be pitied than blamed. At the same time, we do not want "fulmination" against shams. "Why," says "Art Lover," "do they not fulminate against floor-cloth painted to imitate a patterned stone pavement with an ornamental border?" Simply, I should say, because there are far more serious matters requiring "fulmination," or more properly speaking, "ventilation;" and because the best patterns of oil-cloth, though having an ornamental border, do not attempt to imitate patterned stone.

Gold presentation-cups to which "Art Lover" alludes as being far inferior in æsthetic beauty to plaster vases hawked about the streets by Italian image boys, are only proofs that the artistic excellence of a thing does not depend on the material, but on the design. Shams and imitations are utterly void of design, except the design of imposition. I do not say this of necessary and useful shams. The matter about which we are arguing I take to be architectural. Shams, even in ordinary things, such as cork legs, and false teeth and hair, are only resorted to in extreme necessity, or as exceptions to a rule. In building, this necessity does not obtain, unless it be made. To build a house on cork legs and with false teeth is ridiculous, and expensive too, and a thing that art-lovers might be expected to discountenance. With regard to cement and ashlar coating to brickwork, there is no reason, *per se*, why cement should imitate stone. It is well known that the bricks made in the suburbs of London are so inferior as to be unbearable, if exposed to view in a building. If they must be coated with cement, the coating need not be "jointed, and coloured in imitation of stone." Let the cement coating be treated *as a cement coating*. The architects are beginning to feel that the shammery of pseudo-stone in cement is derogatory to art, and as irksome as the necessity of false teeth, false hair, and cork legs.

The ammunition that "Art Lover" has kept in reserve I should like to see fired off.

HI JACULIS ILLI DEFENDERE SAXIS.

ALBERT MEMORIAL, EXETER.

SIR,—A correspondent in your last issue says that a building committee "would of course subject themselves to legal proceedings in the event of their finally accepting a design which was contrary to their instructions in the most practical and important element."

Is this true? and, if so, what are the proceedings which can be taken?

I sent in a design for the Exeter Albert Memorial, under the distinct instruction "not to exceed 5,000*l.*" in cost: the two premiated designs, and a third honourably mentioned, could neither of them be carried out for less than 10,000*l.*—indeed, an Exeter architect writes me, of the first, nearly 15,000*l.*

I have exposed this to the committee, and asked the revisal of their award; but, after a second meeting, and reading my further offer to prepare working drawings, &c., free of expense to them, should builders' tenders deny my estimate, the committee has returned my drawings without note or comment, or reply to either of my letters. I understand the committee is composed of gentlemen of unimpeachable integrity. What would your correspondent advise?

EDWARD C. PRESSLAND.

* The paper to be read on, this Friday, the 24th instant, will be by Mr. G. H. Birch, on "London during the Middle Ages." The annual dinner will take place on Thursday, the 30th instant, at the Freemasons' Tavern, Great Queen-street.

THE NATIONAL GALLERY AND BUCKINGHAM PALACE.

SIR,—THE recent debate in the House of Commons, as to the removal of the national gallery of pictures, leaves the question open for rediscussion, and I wish to lay before your readers a comprehensive plan of improvements, suggested with no object in view beyond the public good.

The plan is this. It is proposed to remove the National Gallery to Buckingham Palace, and to build a new palace for her Majesty at Kensington Gardens, when the present National Gallery would be handed over to the Royal Academy, on proper terms.

The receipts from the sale of twenty acres of ground on the south-west side of Buckingham Palace, estimated at 250,000*l.*, would not only be sufficient to build a new palace, but to open up the Mall of St. James's Park to Charing-cross, at the one end, and Grosvenor-place at the other. With this new street, in connexion with the proposed street from Pont-street to Cromwell-road, South Kensington, a Bill for which has been before Parliament, we shall have a continuous line of new street, which will completely relieve Regent-street, Piccadilly, and Knightsbridge-road. It is new streets, and not new railways, that are so much wanted in London; and now the public have the opportunity of completely relieving the crowded streets of the West-end without a shilling of expense.

Plans and estimates of the work have been prepared, from which I extract the following:—

1. Cost of new palace, with enclosures, &c.	£170,000
2. Purchase of property at Spring Gardens	30,000
3. Cost of making the street through Buckingham Palace Gardens	50,000
	£250,000

Responsible contractors being willing to undertake these works for the sum specified, the question of their practicability, without cost to the nation, is placed beyond a doubt.

If it be said that this plan would involve the loss of ground to the public at Kensington Park, the reply is, that that loss will be made up to the public by adding an equal quantity of land to the Green Park; so that there need be no complaint on that score. Buckingham Palace is so overlooked by the hotels and houses recently built in Victoria-road and Grosvenor-place, as to be very unsuitable for a royal residence: consequently it is little used. A few drawing-rooms and state balls are held in the course of the season, but these could be held equally well at Kensington Palace: the change, therefore, would, we think, be a desirable one as respects Her Majesty's convenience.

For a National Gallery, Buckingham Palace, surrounded as it is with parks and gardens, is all that can be desired; and, when contrasted with Trafalgar-square or Burlington House, its superiority is obvious. A.

STAINED GLASS.

SIR,—People do not seem generally to understand the principles of beauty in stained glass. Permit me to explain.

1. Colour applied to canvas or wall is opaque: there is no transparency in an oil painting or fresco.

2. Therefore glass painted with colour would be a failure, because glass is transparent, and all applied colour is essentially non-transparent.

3. Therefore a window should not look like a transparent picture.

4. A stained-glass window should be made up of a number of pieces of stained glass, each piece of lovely colour, the whole forming a combination of lovely colour—a mass of gems.

5. Whatever drawing is necessary in a stained-glass window, should be done with the fewest possible lines, so as not to injure the colour of glass. Fine shading spoils colour of glass, and is also lost, as windows are intended to be seen from a distance. The lead lines in which glass is set are so arranged by the skilful artist as to give much of the effect of drawing, therefore avoiding black lines on the glass.

6. The fault of Munich windows is, that they look like transparent pictures—not like pictures made up of bits of stained glass: they are full of fine shading.

7. The true effect of a stained-glass window is a broad effect of colour gained by using a number of pieces, not too small, of stained glass with few lines on them, and is to be seen especially in the works of Messrs. Morris, now exhibited at South Kensington.

8. The Mediæval manner of using stained glass, as above described, was the true one; therefore all modern stained glass, if it is good, will have a more or less Mediæval effect.

STAINED GLASS.

COMPETITIONS.

SIR,—I venture to make a suggestion relative to the above unpleasant subject. I propose that the Institute or the Association take the subject into consideration, and frame a set of reasonable and just conditions to be observed by committees and others, who advertise for competition plans. All architects to be requested to form a union, and pledge themselves not to compete unless the conditions of the competition are approved of by the committee of architects appointed to decide the question. A very large number of architects would, I am certain, only be too glad to join such a union as I have proposed. Committees and others advertising for competition designs would then be compelled to offer better and more just terms to competing architects. There is not another profession, or even a trade, in which its members are so continually insulted in competitions as are the members of the architectural profession. UNITY.

DOUBLE ACROSTIC.

THE LETTERS.

1. O'ER the wide plain he rides with lightning speed;
   A tent his home, his truest friend a steed.
2. A minister of state, in history known,
   Who, though a Churchman, led and ruled a throne.
3. In former days a singer known to fame,
4. And his, in music's art the mightiest, name.
5. A noble epic of a far-off day;
6. 'Neath southern skies it flings its falling spray.
7. Where silver Thames 'mid flow'ry meadows flows;
   Four centuries back, its halls of learning rose.
8. Its lowly rafters, or its high-arch'd space,
   Whitewash may deck, or gorgeous painting grace.
9. In every fireside nook they find their homely place.

Buildings. *μ.*

ROMAN CATHOLIC CHURCH-BUILDING NEWS.

Brighton.—Between two and three years ago, the new church in Upper North-street, dedicated to St. Mary Magdalene, was opened. Only a section of the building was then completed, the western end of the nave being temporarily closed, so as to admit of divine service being performed. Recently the works have been resumed; and they will now be continued until the original design of the church (in the Early English style) is completed. At the western end, the nave is to be extended some 33 feet, and in this portion of it the organ gallery will be erected. On the north side of this addition to the nave a spire is in course of being raised. The tower (58 feet in height), which is built of red brick with stone dressings, has seven windows in it, for the accommodation chiefly of the belfry and ringing-loft. The buttresses which support the tower on the north side have two niches for figures; and at each of the four tops of the springing of the spire there will be the figure of an angel, of large proportions. The spire itself is built of stone; and its height, from the springing to the top finial, will be 63 feet 6 inches: it will contain a dormer window and two smaller ones above. The total height, from the base of the tower to the top of the vane, will be about 130 feet. Mr. Blunt, of London, is the architect of the church, and the work is being performed by Mr. Fabian, of this town.

CHURCH-BUILDING NEWS.

Hascomb.—The new church here, dedicated to St. Peter, has been consecrated by the Bishop of Winchester. The church will hold about 120 persons. The architect is Mr. H. Woodyer, of Graffham, and the builder, Mr. Mitchell, of Shalford. The expense of erection is about 2,000*l.*, which will be defrayed by Mr. J. Godman, of Park Hatch, and the clergymen of the neighbourhood. All the men in the parish had a hot dinner provided for them at the White Horse Inn, and were addressed by the bishop in a very humorous speech.

Portsmouth.—In the Landport district, the chief stone of a new church has been laid in Surrey-street, to be called the Circus Church. The new edifice has a frontage in Surrey-street of 66 feet, and a depth of 70 feet, with an additional building at the back about 24 feet by 19 feet, containing vestry, gallery, &c., and connected with the building by a large elliptical arched opening. Its internal height is 40 feet in the centre. It is divided longitudinally into three spaces by two rows of cast-iron columns, which support the galleries and take part of the weight of the roof. There is a gallery at each side and at the end nearest to Surrey-street, besides the singers' gallery at the opposite end already referred to. The ceilings over the side galleries are flat, with ornamental perforated openings for ventilation. The centre space is covered with a ceiling at a higher level than those over the galleries, with horizontal glazed panels, for the admission of light. The principal front will have kiln brick facings, with bath stone quoins, and Portland cement dressings, the openings have semicircular heads with arches in gauged brickwork, the whole surmounted by an ornamental cornice, the central portion of the elevation having a pediment following the lines of the roof. It is proposed to construct a bell turret upon the end of the roof next Surrey-street. The other fronts are to have kiln brick facings and plain semicircular headed window openings. The church will seat about 1,800 persons. The seats are open benches of deal, stained and varnished. A school adjoins the main building, and communicates therewith. It has a frontage to Surrey-street of 28 feet, by a depth of 68 feet, and is intended to accommodate 600 children. It is a plain building, of one large room, 19 feet high in the centre, and 10 feet on the walls. The style is Italian in character. The architect is Mr. B. Tabberer, of London. The buildings are to be finished by November next, and the cost will be about 2,600*l.*, independently of the purchase of the land, and other incidental expenses. Mr. Backhurst, of Landport, is the contractor.

Kenilworth.—The plans for the restoration of the church, approved by the parish at public meetings held in February, 1863, have been altered in this respect, that the present inconvenient vestry-room will be thrown into the church, a room of equal size being substituted in the north transept; and that, in place of a gallery at the west end of the building, there will be a small south transept, corresponding to that already existing on the north side. The main features therefore of the restoration will be these:—All the galleries will be removed; the mean round arch between the chancel and the nave replaced by a pointed arch; an aisle added to the chancel on the south side, and the long line of roof on that side of the building broken by the small transept already alluded to. The roof of the nave, which now blocks up one of the windows in the belfry tower, and dwarfs the already sufficiently short steeple, will be moved; the ceiling within removed, and an open roof shown. The chancel roof, on the other hand, will be raised. All the present pews will be removed, and open seats substituted. Tenders for contracts have been received by the committee, and that of Mr. Marriott, of Coventry, has been accepted. He engages to complete the general works for 2,080*l.* The seating, if done in oak, will cost 950*l.*; if in deal, 520*l.*, and will be in addition to the 2,080*l.* The committee, have, therefore, contracted at present only for the general works, leaving the seating, whether in oak or deal, and the warming, to be determined, according as the state of the finances may permit. The subscriptions already received and promised amount to 2,800*l.*

Symondsbury (Dorset).—A new church is to be erected at the hamlet of Eype. The site selected is an eminence known as the Mount, about midway between Eype and Bridport harbour. The edifice will consist of a nave 65 feet long, chancel 26 feet long by 20 feet wide, an aisle on

the north side, and small transepts north and south, with a porch on the south side, and a prominent bell turret rising from the west end of the roof. The walls will be of the local stones, but all the windows, doors, and arches of Bath stone; and accommodation will be provided for 300 adults. Mr. T. Bury, of London, is the architect, and Messrs. G. Swaffield & G. G. Hayward the builders.

Pershore.—The Abbey Church of Holy Cross, Pershore, has been re-opened after restoration by Mr. Scott. A full account of what has been done is given in the *Worcester Herald*, from which it appears that almost everything suggested by the architect has been carried out. The work was commenced in October, 1862, under a contract with Messrs. Collins, Cullis, & James, of Tewkesbury. One of the chief features of the restoration is the opening out of the lantern-tower, which it was at one time feared could not be carried out from want of funds. The total amount expended on the church itself up to this time is 5,410*l.* The cost of opening out and restoring the lantern-tower was 402*l.*

Burrington (*Herefordshire*).—The church of this place has been rebuilt and re-opened. The *Hereford Journal* states that the church is the work of two architects; and that, upon the whole, the result is satisfactory. The chancel and screen are from designs by Mr. G. F. Bodley. The style is Early English. The plan includes nave and chancel. The east window consists of three lights, the side ones much lower than the centre, and each surmounted with a quatrefoil, the centre of which is nearer the middle compartment than the line which vertically divides the side-lights. The chancel is floored with encaustic tiles, by Mr. Godwin, of Lugwardine, in three different degrees of richness as they approach the altar. They are after an old example, and agree with one of the tiles turned up in the excavation. The edifice will seat 200 persons. The nave has been erected at the entire cost of Mr. A. B. Knight, of Downton Castle; and the chancel by the vicar and others.

Brighton.—A new church has been consecrated at Cliftonville. It is dedicated to the Holy Trinity. The church will afford accommodation, under the existing contract, for about 650 persons; but it has been arranged to furnish 200 additional sittings, making a total of 850, by the erection, if necessary, at a future period, of an aisle on the north side, the arcade of communication between it and the nave being already constructed. The edifice, as it stands, consists of nave, side-aisle, with south tower, porch, and chancel, with apsidal end. The interior is very unpretending. The roof is open timbered, stained, and varnished; the details of a simple and inexpensive character. The only decoration of importance in the interior of the building is a stained glass window at the east end of the chancel. This is in three divisions, each division being in two compartments; the centre division illustrating the Baptism of Our Saviour, and the Last Supper. This has been erected as a monument to the memory of Capt. John Taylor, R.N., and his wife, father and mother of the Rev. F. J. Taylor, who has held the office of curate, at Hove, for twelve years. The other divisions are presented by subscriptions. The division to the right of the centre one contains the sacramental injunctions, "This is my body, which is given for you," and "This cup is the New Testament of my blood, which is shed for you." Directly opposite the pulpit, at the other extreme end of the church, is erected a gallery, capable of accommodating about 100 persons, in which is placed temporarily a small organ. The total length of the church is 120 feet, and the breadth of the nave is 25 feet, and of the aisle 15 feet. The interior of the church, in its unpretending character, is only in harmony with the exterior, which is without architectural pretensions. Bricks are used in the façade, with a moderate admixture of Bath stone. A tower and spire enter into the design when completely carried out; but this portion of the edifice awaits the collection of the necessary funds. The plans were furnished by Mr. Woodman, of Brighton, architect, and the church was built by Mr. Cane, of Brighton. The site is on a piece of land slightly elevated, at the top of Medina-villas.

Gloucester.—Some months ago the ancient stained glass of the clerestory of the south transept of the cathedral was removed, preparatory to its being cleaned and re-arranged, by Messrs. Hardman, of Birmingham. It has now been replaced, the stonework of the windows having in the interval also been repaired. The upper lights are filled with a design representing the vine, in white and yellow, on a ruby ground; and the lower lights are composed of the ancient quarries, with coloured borders. Workmen have been engaged in taking the measurement of the two large windows at the west end of the south aisle, preparatory to the erection of the Jenner and Elliott memorials, which it is expected will be completed by the end of October. The execution of the Elliott memorial has been entrusted to Messrs. Hardman, and the glass for the Jenner window to Messrs. Clayton & Bell.

DISSENTING CHURCH-BUILDING NEWS.

West Ashling. — The new Congregational Church at West Ashling, according to the *West Sussex Gazette*, has been opened for Divine service. The walls are of stones from the cathedral at Chichester. Colonel Webber Smith gave the ground. The architect was Mr. H. N. Goulty, of Brighton.

Deal.—A new Wesleyan chapel of much larger size than that in Duke-street is about to be erected in Queen-street. The estimated cost of the edifice is 2,000*l.*, half of which sum, it is reported, will be contributed by Mr. Wm. Betts, of Sandown.

Dudley.—The memorial stone of a new Baptist chapel, at Netherton, has been laid by Mr. H. B. Sheridan, M.P. The building, which is intended to hold about 400 persons, will be erected by Messrs. Bagnall & Round, at a cost of 820*l.*, from designs by Mr. Grosvenor.

Penrick.—The following were the estimates sent in for the proposed new Congregational Chapel at Pole Elm, in this parish. Mr. G. Johnson, architect:—Heming & Son, 650*l.*; Wilson, 588*l.*; Wood & Son, 515*l.*; Holland, Brothers, 463*l.* 10s.

Openshaw (*Lancashire*).—A new Wesleyan Methodist chapel has been opened for divine worship in Openshaw. The edifice occupies a plot of land abutting upon a side street off Grey Mare-lane in the Ashton-road, and has the advantage of a front and side approach. It consists of a chapel 56 feet in length, and 45 feet in width, calculated to accommodate 610 persons; and, at the rear, a school 54 feet in length, and 25 feet in width, with class-rooms, two vestries, and a chapel-keeper's house. The chapel proper is designed in the Anglo-Italian style. The works have been carried out by Messrs. Warburton, Brothers, builders, of Harpurhey, under the superintendence of the architects, Messrs. Hayley & Son, of Manchester. The cost, exclusive of lighting and warming, but inclusive of boundary wall, &c., is about 2,600*l.*

Plymouth.—The foundation-stone of the new Wesleyan chapel, to be erected in King-street, has been laid in the presence of a very large concourse of persons interested in the progress of Wesleyan Methodism. The site of the chapel is at the junction of King and Tracey streets; and the piece of ground on which it will stand is 225 feet in depth by 74 feet in width, and cost 1,700*l.* The building will be in the Italian style, with stone frontages in King-street and Tracey-street, and is intended to seat 1,600 people. The architect is Mr. J. Forster; and the contract for the erection has been taken by Messrs. Call & Pethick, at the sum of 5,000*l.*

Llanymynech.—The foundation stone of a new Presbyterian chapel has been laid here, in the presence of a large concourse of spectators from the immediate neighbourhood, and from Oswestry, Welshpool, and other parts of the Principality. The building is to be Gothic, and without much ornament. At one angle will stand a turret, with a slated spire, rising to the height of 45 feet. The building is to be constructed of Sweeney stone, with red bands and arches, and Bath stone dressings. Its size internally is to be 36 feet by 27 feet, and it will contain accommodation for 175 persons. Mr. Whiston, of Wolverhampton, builder, has contracted to execute the works for the sum of 338*l.*; and the architect is Mr. W. H. Spaull, of Oswestry; being the same builder and architect as for the Oswestry Public Hall.

Kantsford (*Cheshire*).—The foundation-stone of a new Wesleyan chapel and schools has been laid here. The site is adjoining the savings-bank in Princess-street. The style will be Early English; the front faced with white Alderley stone, in random courses, and the dressings of red Alderley stone. The plan is a parallelogram, 63 feet by 37 feet, with ministers' and deacons' vestries behind. The chapel will be divided into nave and two aisles by pillars of wood, supporting a clerestory above, from whence most of the light will be obtained, there being on one side of the site buildings touching the chapel, and on the other only sufficient space to admit of a passage between the chapel and the savings-bank. The front will have a tower on one side, surmounted by a spire, the total height being 70 feet. The entrance will be in the centre of the front into a lobby, from whence will be doors right and left into the aisles; on each side of the door a single-light window, and above a traceried window of five lights. At the east end there will be a wheel window, 11 feet in diameter, filled with quarry glass of an ornamental pattern. There will be a gallery for the school-children at the west end, which will also contain the organ. The nave will be divided into five bays, the pillars being of wood, as also the clerestory. The chapel will be heated with hot water, and lighted with gas from the roof, and will accommodate about 450 persons. The building will be separated from the road by a stone wall, surmounted by a dwarf iron railing. The total cost, including purchase of site, architect's commission, &c., will be 2,680*l.* The architect is Mr. T. R. Clements, of Knutsford; and the contractor Mr. Massey, of Alderley Edge.

Cheadle. — The London and North-Western Railway Company having purchased the Wesleyan chapel at Cheadle, a larger edifice is about to be erected in a central part of the village. The amount given by the Company for the site and materials of the old building is said to be 900*l.*; and this, with the sum already subscribed, will go far to meet the cost of the new chapel, which is estimated at 1,300*l.* The foundation-stone has been laid. The chapel is to be built of seconds bricks, with Hollingstone dressings, and black bricks will be used in some parts of the exterior by way of relief. It will be in the Geometric style, and will consist of a nave and transepts. It is in contemplation, at a future time, to add a school-house to the chapel, at a probable cost of 400*l.*; but until this be done, the two transepts, with the intervening space, will be appropriated to the use of the children connected with the Sunday-schools. This portion of the chapel will be separated from the nave by a wooden screen, so constructed that the whole of the interior will be available, when required, for devotional or other purposes. The nave, which for the present is to be used as the chapel, will accommodate 240 persons. The dimensions within the walls are 64 feet by 29 feet. Suitable vestry and other accommodation will be provided at the rear. The building will be lighted by traceried windows of Gothic pattern. The roof will be of stained open timbered work. There will be no galleries. Mr. H. Fuller, of Manchester, is the architect; and Mr. G. Bardsley, of Cheadle, the contractor. The sum mentioned as the estimated cost of the building will include the expenses of heating and lighting.

SCHOOL-BUILDING NEWS.

Westbromwich (*Staffordshire*).—The Oldbury National Schools, Oldbury, the chief stone of which was laid on the 3rd of November, 1863, by Lord Lyttelton, were formally opened on the 1st of June by the Bishop of Worcester. The buildings comprise a schoolroom, 72 feet long by 32 feet wide, for boys, with a class-room, 18 feet by 16 feet; a schoolroom, 50 feet long by 18 feet wide, for girls, with a class-room, 18 feet by 14 feet; and an infants' school, 42 feet long by 22 feet wide, with a class-room, 21 feet 9 inches by 16 feet. The style is an adaptation of Early English Gothic. The ends of the boys' and the infants' schools facing John-street are carried up as gables, and a large wheel-window and two three-light windows inserted in the former, and a lofty lancet-pointed three-light window in the latter. The flank of the boys' school is also broken up by a gable containing a rose-window with two three-light windows beneath. The side of the girls' school has two smaller gables, with a three-light window in each. The entrance to the boys' school is surmounted by a bell-turret. The walls are built of red bricks, with blue bricks for the plinths and ornamental work in the strings, arches, and labels. The principal windows and other chief features of an ornamental character are worked in Bath stone. The roofs are high pitched, and are covered with red and blue tiles in patterns, surmounted by an ornamental ridge crest. The main timbers are visible from the inside, and wrought, stained, and varnished. The architect was Mr. E. Holmes, of Birmingham; and the builder, Mr. J. Harley, of Smethwick.

GAS.

THE Rugby Gas Company's directors propose a dividend for the year on shares of the different classes amounting to 15 per cent., and that 200*l.* stock be added to the reserve fund; also that the price of gas be reduced to private consumers from 4s. 7d. to 4s. 2d. per thousand feet, with a discount of 5 per cent. for payment within a month from quarter-day; that the price for lighting the public lamps after September next be reduced from 58s. to 54s.; and that the price of gas to the railway companies be reduced from 3s. 6d. to 3s. 3d. per thousand feet.

The Hinckly Gas Company have resolved that the price of their gas be reduced to the public 10d. per thousand; the net price to be 5s. 10d. instead of 6s. 8d., as before. If the consumption increases, a still further reduction may be anticipated.

The South Shields Gas Directors have laid the foundation stone of a new retort-house, which, with other extensive improvements, will be carried out upon the works in Waterloo Vale, in that town. The new works will occupy double the area of the old ones, and in consequence of the improvements, a number of old tenements will be demolished, and the lower end of St. Hilda's-lane will be closed up.

The Hawick Gas Company have declared a dividend of 10 per cent. on their paid-up stock, and have resolved that the price of gas be reduced from 6s. 5½d. to 6s. 3d. per 1,000 cubic feet.

In the journal of the Society of Arts, Mr. C. Tomlinson calls attention to the attempt of a M. Payen, well known as a writer on technological subjects, to claim for a Frenchman, of the name of Philippe Lebon, the discovery of the way to manufacture gas for lighting, from wood and coal, towards the close of last century. "It was not till ten years later," continues M. Payen, "that is to say, twenty-six years after the primitive invention by Lebon, that Murdoch succeeded in lighting up the factory of Boulton & Watt, at Soho." After giving this word to Murdoch, continues Mr. Tomlinson, "our author brings in a host of French names, who did all that was required in the production, purification, and distribution of street gas. Now, all this is unfair, not singularly unfair, because it is unfortunately the usual mode of treating such subjects adopted by French writers. Every one at all acquainted with the literature of the subject knows that in 1667 Mr. Shirley described, before the Royal Society, a burning spring at Wigan, in Lancashire, and traced the origin of the gas to the beds of coal beneath: he also pointed out that the same kind of gas might be procured by the combustion of coal. In 1739 we have a letter printed (Phil. Trans.), but written to Boyle, who died in 1691, and, of course, written before his death, in which the method of procuring gas from the distillation of coal is described. Dr. Hales, in his work on 'Vegetable Statics,' published in 1726, states that he obtained 180 cubic inches of gas, weighing 51 grains, by distilling 158 grains of Newcastle coal. 'This result,' says Mr. Hughes in his 'Treatise on Gas-works,' 'which is rather more than 8,500 cubic feet per ton, agrees very nearly with the production of gas actually realised from Newcastle coal at the present day.' In 1733, Sir James Lowther described (Phil. Trans.), the inflammable air of a coal-mine near Whitehaven; and, in 1765, a proposal was made to the magistrates of Whitehaven to convey this gas through pipes to light the streets of the town; and the proposer, Mr. Spedding, proved the practicability of the idea by conveying the gas into his own office, which he illuminated by its means. . . . . While M. Lebon was engaged in a series of dangerous failures, Murdoch had completed his invention so far as to apply it safely to the purposes of illumination."

Books Received.

Report on the Works of Pupils in the French Schools of Design, recently exhibited in the Palais de l'Industrie, Paris. By WALTER SMITH, Head Master of Leeds School of Art. London: Simpkin, Marshall, & Co. 1864.

THE writer of this pamphlet is one of the Art-Masters who were appointed by the Science and Art Department to visit, in 1863, the Paris Exhibition of the works of pupils in the French Schools of Design, and to report on them under certain headings. Returning to his duties, as master of the Leeds School of Art, Mr. Smith wrote a full report of what he had seen, and what he thought, and duly forwarded it, expecting it would be published. Finding, however, that the Department declined to do so, he has published it himself, with an angry prefatory letter addressed to Sir Stafford Northcote, chairman of the Parliamentary Committee of Inquiry into the Condition and Management of Schools of Art.

In his report the writer states his conviction that we have little to fear from any future artistic competition with the French. "The artistic instruction given to the French," he says,—

"As judged of by the vast majority of the works in the Palais de l'Industrie, is child's play in comparison with the art education obtainable in England in schools of art; so that, unless schools of art become extinct in England, and are invented in France, we need not fear any future artistic competition in our industrial arts, or in design applied to manufacturing purposes."

Elsewhere he says, a comparison of the English and French systems of art-education is overwhelmingly in favour of the former.

"I should consider it nothing less than calamitous if any serious modification of our English system were made, with a desire of assimilating it to the French; for if this were done, instead of advancing steadily, as we have done for the last twelve years, we should be retrograding. This view of the subject is, however, perfectly consistent with our adoption of that which is excellent in the systems of individual schools, and incorporating it with our own system; and I submit to the favourable consideration of the Department the advisability of a further examination, by a few competent masters, of the management and discipline of some of the schools mentioned favourably in this report: the information to be sought for in the class-rooms of the schools themselves; and in the close observation of the methods of study adopted by the best schools. More good would result from such an examination by practical men, who have from experience the knowledge of where real difficulties lie in our system, than from the criticism of all the exhibitions in the world.

My own opinion, derived from observations on the subject, extending over many years, is, that though our system of art-education is still imperfect, it is yet by far the best plan of art-education in existence; and that the difficulties which arise in its working are not the result of the system, so much as the want of true educational ability in the men who work the system. More schools of art are shut up by the masters than by the rules of the Science and Art Department; and this is the case, not from any unwillingness to perform their duties as art masters by the masters themselves, but because, by education and their own tastes and inclinations, many men who can take certificates are radically unfitted to become educationalists."

In respect of instruction in science, however, he considers the French doing much better than we are. The French, he says, have inaugurated a system of mechanical drawing incomparably superior, in a practical sense, to that which exists in England; and he mentions, as what he considers a humiliating fact, that the School of Art at Leeds has to procure its educational examples of machinery from Paris.

VARIORUM.

"Church Restoration: What is it? Whence is it? Rivingtons, London and Oxford." This is a good little tract, by the author of "Thoughts on Churches and Churchyards." The following extract will show the nature of it:—"The Bishop of Lincoln's words are weighty. 'It was a mark of a languid and dwarfed Christianity when Churchmen adorned their houses with all the luxuries which wealth could provide, and allowed the House of God to remain uncared for and neglected.' . . . . . If the love of high art advances as it has done of late, and with it an appreciation of what is beautiful, we may again ere very long have a coloured architecture; and if we are to have it, painting must, we suppose, be the chief means of effecting it, whether of figures in fresco, or in the far simpler forms of diaper, together with various coloured marbles and bricks, now freely used. It is thought that our ancient churches, though, so far as we know, not warmed, yet were painted, as witness that most perfect specimen of ancient colouring in the monument of Bishop John de Sheppey, in Rochester Cathedral. The effect of colour may now be seen in perfection in Ely Cathedral, in rich glass and golden diaper, relieved by neutral tints, grey-stone, and Purbeck marble, as also in the restored sculptures in the beautiful chapter-house at Salisbury, in the magnificent choir-screen at Hereford, and in a tomb lately erected from designs by Mr. Blomfield, to the memory of Bishop Pearson, in Chester Cathedral."——"Homes without Hands. By the Rev. J. G. Wood, M.A., F.L.S. Part VI. Longman & Co." This account of the habitations constructed by various animals continues to sustain its character as an interesting and instructive work. The part under notice relates chiefly to wood-boring insects, a subject of practical importance to the builders of homes *with* hands.——"The Fractional Family; being the first part of Spirit-mathematics-matter. By Arthur Young. London: Sampson Low & Co. 1864." This is a thoughtful book, with rather an odd and uncouth title. The "spirit-mathematics-matter" is an unwieldy word which relates to the fundamental principles of the universe, of which the book treats; but the "fractional family" relates to the very natural habit of the world to associate in small families, according to closeness of relationship. This social arrangement the author reprobates; and he would wish to substitute "the integral family," thus making all the world akin; but we suspect something must be done first of all to *overturn* the *self*-asserting principle, ere mankind will ever consent to live in communities such as Mr. Young and others contemplate. The Christian apostles did live in common; but it was under the direct and sanctifying influence of the Holy Ghost that their selfish propensities were subdued, and their passional and mental nature adapted to such a state of social communion. The case of monks and nuns is not exactly to the point, even though spiritual influences be admitted to have "mortified the lusts of the flesh" in such cases; because what is contemplated by such social reformers as Robert Owen and Mr. Young is not exactly the ascetic life, but "integral families" of men, women, and children, in the full exercise of all their faculties. Mr. Young's volume contains some curious symbolical diagrams, showing "the path of destiny," and embodying his thoughts in general on the subjects regarding which he writes; but their meaning and value require thought to make out; and, after all, we fear their speculative drift leads to no very definite practical result. There is no little thought, as we have said, however, displayed in the work, which is curious and amusing, if not very instructive. One certainly highly practical result the author has in view, could he only establish his "integral family" arrangement,—that is, the sanitary improvement of the "homes" of the people; but it must be remembered that these homes are not such at all as are now inhabited, each, merely by a single family, of father, mother, children, and servants, but a much more wholesale affair, seemingly such as Owen originated, and more especially such as a body called the Christian Socialists once, we remember, spoke of establishing, in the form of model agricultural and manufacturing villages. "What is wanted," says Mr. Young, "is an architectural system which shall permit of a thorough co-ordination of sexes and ages, and occupations, and on such a scale as to permit of all the most improved appliances of science and art;—and such distributive order, model fractional houses [such as the model lodging-houses], of whatever description, can never combine sufficiently with economy of means."——A new edition has been published by Mr. Tegg of poor Albert Smith's amusing and acute "Adventures of Christopher Tadpole," the best of his works. It contains the original capital illustrations by Mr. John Leech.——The "Autographic Mirror," now advanced to No. 9, maintains its interest; and will form, when completed, a remarkable and interesting work.

Miscellanea.

MOSCOW TO BE LIGHTED WITH GAS.—It is stated that a concession for lighting the city of Moscow with gas has been granted to a party of Englishmen, most of whom are directors in the London gas companies. Several foreign houses and bankers competed for this privilege.

FEVER AT OWLERTON, SHEFFIELD.—A report having prevailed that fever had broken out at Owlerton in consequence of the place being choked up with stagnant mud from the inundation, this was contradicted by the statement that only clean sand and gravel had been swept into the cellars, but that it was being cleared out. It seems, however, that this was incorrect, and that the fever has broken out at Owlerton, partly on account of the collection of mud, and partly from the consequent defilement of the water-supply, from the wells in the neighbourhood. There are now fifty-six cases of fever in the village. It is hoped, however, that the precautions now taken, by a new water-supply, by clearing the drains, and by the free use of disinfectants, may prevent further mischief. The cleansing of the houses has involved enormous labour at the cost of the Sanitary Committee.

COPPER.—The price of copper has been reduced 5*l.* per ton, making present wholesale prices of tough cake 93*l.* per ton, and best selected 96*l.*

RELICS AND ROMAN REMAINS IN A CHURCH.—Bowes Church (county of Durham) is at present undergoing restoration, and many interesting relics have come to light. Several floriated crosses, built into the walls, have been disentombed; and fragments of Roman pottery and stonework (doubtless from the adjacent camp) have been discovered in the foundation.

RAILWAY TRAFFIC RETURNS.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 4th of June, on 11,207 miles, to 628,806*l.*, and for the corresponding week of last year, on 10,809 miles, to 571,025*l.*, showing an increase of 398 miles, and of 57,781*l.* in the receipts. For the week ending the 11th of June, they amounted, on 11,242 miles, to 636,667*l.*, and for the corresponding week of last year, on 10,809 miles, to 561,487*l.*, showing an increase of 433 miles, and of 75,180*l.* in the receipts.

RESTORATION OF GOD'S HOUSE CHAPEL, WINKLE-STREET, SOUTHAMPTON.—This building having undergone a thorough renovation, French Protestant worship has been resumed therein. The building is vested in the hands of four trustees, under a scheme agreed upon by the Lord Chancellor. There are stalls for the accommodation of the four brethren and four sisters of the hospital. The other part of the church is fitted up with movable seats.

SOCIETY OF ARTS' PRIZES.—H.R.H. the Prince Consort's prize of twenty-five guineas has been awarded to John Allan, 25, of the Glasgow Athenæum, assistant surveyor, who obtained the following first-class certificates:—1861. Logic—first-class certificate, with first prize. 1862. English history—first-class certificate, with first prize; English literature—first-class certificate, with second prize. 1863. Arithmetic—first-class certificate, with first prize; book-keeping—first-class certificate, with first prize; geography—first-class certificate, with second prize. 1864. Magnetism, electricity, and heat—first-class certificate, with second prize; domestic economy—first-class certificate, with first prize; animal physiology—first-class certificate, with second prize. [Well done, John Allan!] In practical mechanics—first prize, 5*l.* to David Bruce, 18, Newcastle-on-Tyne Mechanics' Institution, engineer; second prize, 3*l.*, Henry Logan, 23, Wakefield Mechanics' Institution, ironfounder. In free-hand drawing—first prize, 5*l.*, Henry Hill, 33, Messrs. Chance's Library, Smethwick, designer; second prize, 3*l.*, John Dingwall, 28, Popular Evening Classes, Andersonian University, Glasgow, ornamental draughtsman. In mechanical drawing—first prize, 5*l.*, Thomas Edwards, 19, Oldham Science School, mechanic; second prize, 3*l.*, Thomas Wood, 30, Oldham Science School, clerk.

REMOVAL OF METROPOLITAN TURNPIKES.—On Monday morning workmen commenced the removal of the toll-bars at Camden-town and other places. The new Act, 26 & 27 Vic., cap. 78, will take effect immediately after twelve o'clock on the night of Thursday next, the 30th instant, and abolishes on and from that time no less than eighty-one gates and bars; frees fifty-one miles of road; and reduces the tolls in the country districts, Hounslow, Brentford, Ealing, Uxbridge, Harrow, Edgware, Tottenham, Enfield, Edmonton, Lee Bridge-road, &c., to 1d. for every horse not drawing; 2d. every horse drawing; every score of oxen, &c., 5d.; calves, sheep, &c., per score, 2½d. The gates and bars so to be removed on 1st July, 1864, are,—Fulham—Walham Green, Earl's-court, and all gates and side-bars in the district; Kensington—Hammersmith, Notting-hill, and all gates and side-bars in Kensington and Hammersmith; Harrow-road—Kilburn, and all gates and side-bars; Camden-town—King's-road gate, High-street gate, Chalk-farm gate, Haverstock-hill gate, and all gates and side-bars; Camden-road—Brecknock gate, and all gates and side-bars in Camden-road, &c.; Kentish-town—Gate in road, and all gates and side-bars near, and at Gloucester-place, &c.; Holloway-road, and all gates and side-bars; Islington, and all gates and side-bars; Ball's-pond, and all gates and side-bars; Kingsland-road—Cambridge-heath, Hackney, and all gates and side-bars in Hackney, Clapton, and Stoke Newington; Twickenham and Teddington—All gates and bars; and the City-road gate, and all gates and side-bars.

ECCLESIOLOGICAL SOCIETY.—The annual general meeting was held in the South Kensington Museum, on Wednesday evening last, Mr. Beresford Hope in the chair, when the Report was read, and a discussion on the arrangement of Town Churches took place. We are obliged to postpone our report of the proceedings.

RECREATION GROUNDS AT BOLTON.—The town council have given an instruction to their finance and general purposes committee to purchase the vacant land adjoining the recreation ground in Lever-street, Bolton-moor, that it may be fitted up for the physical training of the young of both sexes. The recreation ground referred to is rather more than 3½ acres in extent; was presented by Alderman R. Heywood to the borough for recreative purposes in December, 1862; and has been planted and laid out by the corporation. The price required for "the adjoining land" is 1¼d. per yard; and, taking the extension at rather more than 3½ acres, the outlay, with the chief rent capitalised, will be about 2,100*l.*

ALDERSHOTT INDUSTRIAL EXHIBITION.—The Camp Industrial Exhibition will be opened at the Clubhouse on the 29th instant, by the Duke of Cambridge. The articles to be exhibited will be divided into two classes,—first, those invented or made by officers, non-commissioned officers, and men, now quartered at Aldershott, or by their wives and children; and, second, of articles collected by officers, non-commissioned officers, and men, now quartered at Aldershott, or by their wives and children (*bonâ fide* their own property), during the course of their service in various parts of the world. The exhibition will be open until the 14th of July (Sundays excepted); and the sum received for admission at the doors will go to defray general expenses; any surplus to be divided among committees of regiments and corps exhibiting.

THE WORKING CLASSES AND THE METROPOLITAN RAILWAY.—Since the underground line was opened on the 10th of January of last year, it has conveyed about fourteen millions of persons. Of these, more than sixty per cent. have been of the third or lowest class of passengers. The company have recently run special trains for workmen, so as to enable them to get to their work before six o'clock in the morning, the fare for the double journey being 3d. By means of these trains the labourer may live out in the open districts about Paddington, and go daily to and from his work in the City for 1s. 6d. weekly; and it is said that when the company's extension is open to Finsbury, they propose to increase the number, and to reduce the payment to 1s. weekly. Very shortly the line will be placed in direct communication with the Crystal Palace, and cheap trains will be run for behoof of the working classes. The opening of the Hammersmith line in connexion with the Metropoliton, which took place on 13th June, will enable the public to avail themselves, at low fares, of the opportunity of being landed in half an hour in the pleasant open country in that neighbourhood.

NEW RACE-STAND, NEWCASTLE-ON-TYNE.—An additional stand has been erected on the Newcastle-upon-Tyne race-course. The design was supplied by Mr. J. E. Watson, of that town, architect. The structure is 50 feet long by 20 feet wide. It is supported by stout metal columns, having flanges and openings, through which the longitudinal timbers pass the entire length, the cross timbers resting on the same part of the columns, the whole being firmly bolted together by screw bolts. The platform is of timber work, properly framed, the couples being let in and resting upon the metal columns, the intermediate couples also being supported by struts. The front, back, and ends, as well as the centre columns, are strongly secured by cross braces. The railing round the top of the stand is also braced, the tops of the metal columns being carried up the full length, and the top rail fixed into them, by which firmness is given to that part of the structure. Easy access is afforded to the stand by a stair, 5 feet in width. The stand is estimated to accommodate about 600 persons. Beneath the stand a roomy and commodious weigh-house has been erected. Light is admitted by windows looking into the stable-yard. At the side next the light a long desk has been fitted up for the use of the Press. The stand has been erected by Mr. William Gibson, builder, Newcastle. The metal pillars and iron work were supplied by Mr. Walker, of the Percy Iron Works.

IMPROVED DWELLINGS FOR THE INDUSTRIOUS CLASSES.—A Joint-stock Company is about to be formed at Southampton, having a twofold object; the first, that of building improved dwellings for the industrious classes on the Marsh estate, by which means the working man will obtain the advantages of residing near their work; the second, that of enabling the corporation to borrow money on the ground-rents, and thus give them the means of fencing the parks without entailing any expense on the ratepayers.

THE DAVY MONUMENT FOR PENZANCE.—The announcement of a donation of 1,000*l.* has led, as we have before mentioned, to the idea of giving this memorial a new form; and to this end a public meeting has just been held, at which Mr. Coulson gave an able and extended memoir of Sir H. Davy, which is reported at length in the *Cornish Telegraph*; and resolutions were unanimously passed approving of the proposal to erect almshouses in combination with a statue of Davy, and pledging the meeting to promote the object in view.

NEW TOWN-HALL, STRATFORD.—The site purchased for the erection of a new town-hall and public offices at Stratford is situate at the corner of West-Ham-lane, in the Broadway. One portion of the land will be appropriated to the widening of the road at the corner of the lane; and on the other portion the town-hall will be erected with suitable public offices for the meetings of the various local boards, police-court, and other purposes. It is estimated that the cost of the land and erection of the hall will be about 10,000*l.*; but it is presumed the lettings of the hall and public offices will repay for the outlay.

ACCIDENTS.—A poor fellow employed as a painter on a house in Victoria-terrace, Victoria-road, has met with a fearful death by impalement, in falling from a ladder at one of the windows. A coroner's jury have returned a verdict of accidental death.——At Hastings, a carpenter, at work on one of the new houses in Warrior-square, was at a window on the second floor, and placed his foot on an iron bracket, which was intended as one of the supports to the verandah. The ironwork, not being properly fixed, gave way beneath his weight, and he fell into the area beneath, a distance of about 30 feet. He sustained some severe contusions but fortunately no bones were broken.——Three deaths have occurred at Liskeard, in Cornwall, from the falling of a wall of the old post-office, which was being taken down: verdict, accidental death.

PAINTINGS BY MR. HOLMAN HUNT.—The life-size Girl of Ghizeh, which, under the title of "The After-glow in Egypt," Mr. Holman is exhibiting, with other pictures, in Hanover-street, is a remarkably fine piece of depiction. She stands in the evening on the banks of the Nile, bearing corn and a water-vessel, and with a flock of Barbary pigeons gathering about her. It is painted with wonderful brilliancy and power. A second picture by the same artist represents "London Bridge on the Night of the Marriage of the Prince and Princess of Wales." The flags and other decorations of the bridge preponderate overmuch at the first glance, but quiet examination soon brings into view a whole world of faces, incidents, and thoughts. The two works serve to show the artist's power alike over large and small. We hear with much satisfaction that Mr. Hunt has undertaken to paint, probably in water-glass, a series of subjects from the history of St. Michael the Archangel, in the church at Cambridge dedicated to that saint. Subscriptions are being raised for the purpose.

APPLICATION OF A KNOWN INSTRUMENT TO A NEW PURPOSE.—The plaintiff in the case of Horton *v.* Mabon had obtained letters patent for an alleged new invention for the improvement of telescopic gasholders. The improvement consisted, among other things, in the application of a double angle-iron cup or trough, filled with water to the points of contact between the respective cylinders of the gasometer, by which the escape of gas was prevented. Such a user of the double-angle cup was new as regards gasometers, but was well known, and had been commonly used for other purposes. In this action for infringement in making gasometers with the double-angle cup, the Court of Exchequer Chamber (affirming the decision of the Common Pleas), held that this was merely the application of a well-known instrument to an analogous purpose; that it was not a new invention; and, therefore, not the subject of a patent.

"FISH PRESERVING."—To satisfy a large number of Mr. Grove's customers, we step out of our way to say that it is not his yard that was referred to by a correspondent in our last.

SHIPLEY WATERWORKS.—In consequence of the increased demand for water in Shipley, Saltaire, and Windhill, the Shipley Local Board have determined to extend their works by forming an additional reservoir for the storage of water at Baildon Bank Top. Its capacity will be ten million gallons. Formed of masonry, backed with puddle and an earthen embankment, it will constitute one of the largest reservoirs of the kind in the country. Tenders have been obtained, and the works are about to be carried out by Messrs. Ives & Son, contractors, of Shipley; Mr. McLandsborough, C.E., of Bradford, being the engineer.

VENDOR AND PURCHASER.—The case of *Morey v. Bigwood*, in the House of Lords, was where a purchaser, after an inspection of some property, had entered into a contract under a mistake that a piece of ground was to form part of the conveyance, and the mistake was not attributable to any neglect on his part, but was in some degree occasioned by statements of the vendor in answer to inquiries as to boundaries. It was held, under these circumstances, that the purchaser (the defendant) having acted under a mistake, it would be inequitable to enforce specific performance of the contract against him. The case was heard upon an appeal from a decision of the present Lord Chancellor, reversing a decree of Vice-Chancellor Stuart, whereby his honour had decreed specific performance.

THE METRIC SYSTEM.—By the permission of the president and officers of the Royal Society, the platinum metre which was obtained by the Royal Society, in pursuance of a resolution of the House of Commons, of March 15, 1816, and brought over by M. Arago from the Academy of Sciences in France, for the purpose of a comparison of the French and English standards of length, was shown on Saturday, at Burlington House, to a number of gentlemen who take an interest in the question of its adoption as the standard of the metric system of measures and weights proposed to be introduced in this country under Mr. W. Ewart's Permissive Bill. On the table were sets of weights and measures, books on the subject, &c.; and Mr. J. Yates gave a short account of the platinum metre, and entered into a history of our standard measures.

SALE OF THE ARBORETUM, WORCESTER.—The premises belonging to the Worcester Pleasure-grounds Company have been sold for 9,500*l.* The property consists of 14a. 1r. 2p. of freehold land, free from land-tax, near to the centre of the city, and without restriction as to building thereon or otherwise. The directors did not attribute their losses to a want of public patronage or attendance, but to the fact of their beginning with insufficient capital. The auctioneer stated also that the property contained 69,030 square yards, and estimating the price at 2s. 6d. a yard, that would bring 8,628*l.* for the land only, to say nothing of buildings, trees, shrubs, flowers, &c. The whole was close to the canal, near to the railway stations and the centre of the city, and there was no restriction on it. The biddings commenced at 7,000*l.*, and gradually rose till Mr. Laslett offered 9,500*l.*, at which price the property was sold.

SOUTHAMPTON CASTLE WALL.—Among the reasons why the corporation should vote a sum of money towards the purchase of the Southampton castle wall, says a correspondent of the *Hampshire Independent*, should be noted that there is no equal portion of the town walls of so much importance as this especial part, as this is the only fragment left of the castle wall which enables the student to trace the distinctive features of the Norman method of fortification. The corporation, which has improperly suffered the castle walls to fall into private hands, are the only proper conservators of such walls, as a party of private gentlemen cannot permanently keep possession for the town of such relics, and it is somewhat unjust to tax the liberality of a few for what is equally for the benefit of all. Moreover, as the ground is of some value on which the castle wall stands, as well as the wall itself, the corporation have their money's worth in the outlay. While spending money to beautify the town in other ways, as at the bar gate and parks, it would seem neglectful of the public interest to let this interesting relic be wantonly destroyed.

A LITTLE INSIGHT AS TO THE MAGNETIC FORCE.—At the Royal Institution, the other evening, Professor Tyndall gave "A Magnetic Experiment," in course of which he demonstrated that a magnetized bar of iron becomes elongated, not shortened, at the moment of magnetization. He also showed, that when rapidly intermitting currents of electricity were sent through the wire, a humming sound was distinctly heard in the iron bar, occasioned, as he conceived, by the momentary changes among the particles of iron as the magnetic power was imparted and lost. The lengthening of the bar was shown to the sight by help of a lever acting on a small mirror and a ray of light, so as to show very minute changes in the length of the iron bar. Dr. Tyndall accounted for the lengthening by the hypothesis that the particles of iron tend to arrange themselves in the direction of the current, which passes lengthwise through the iron bar. This reminds one, we may here observe, of the expansion of water while freezing under the influence of the usually contractile force of cold, and is not, therefore, inconsistent with the attractive nature of the magnetic force. In further illustration of the experiment, that of the arrangement of loose particles of oxide of iron suspended in water was exhibited, showing that, when magnetized, the opacity arising from confusion was replaced by translucency from the magnetic arrangement of the particles in lines. May not this shed a light on translucency and transparency in general, as of crystals and glass?

THE GOVERNMENT ANNUITIES BILL.—We are glad, for the sake of the poorer classes, to have now to note that this Bill has been read a third time in the House of Commons, and passed. On the motion for passing the Bill, Mr. Gladstone stated that dividends would be paid wherever annuities might be purchased; and that a man who purchased an annuity and insured his life under this Bill would not be held to have opened a second account in the sense of the Savings Bank Act. Assurances to be created under the Bill will be a property transferable at law. He had no doubt that the competition of the Government would be highly useful to existing friendly societies: the operation of the measure would be much more to extend the total area than to diminish the field now occupied by such institutions.

ARCHITECTURAL ASSOCIATION.—VOLUNTARY EXAMINATION CLASS.—The class will meet, as usual, on Monday next, the 27th inst., at 7·30 p.m. Subject, "Mechanics," by Mr. J. E. Edmeston, jun. The subject for the Monday following will be "Valuations," by Mr. J. W. Penfold.

TO ARCHITECTURAL DRAUGHTSMEN.
AN ARCHITECT, in London, will shortly require an ASSISTANT, who must be thoroughly acquainted with Gothic architecture, and a first-rate perspective draughtsman.—Address, H. H. Office of "The Builder."

A GOOD GRAINER and MARBLER WANTED.—Address, H. G. Fulham Library, 151, Fulham-road, S.W.

A GOOD OAK-GRAINER is REQUIRED, for a constancy.—Apply to F. PIANDER, 8, Winchester-street, Wellington-road, Kentish Town, any evening after EIGHT o'clock.

GENTLEMAN WANTED.—If this should meet the eye of the Gentleman who travelled in a Second-class Railway Carriage, with a Lady in mourning and a Little Girl, on SATURDAY, the 7th of NOVEMBER, 1863 (being a very wet day), and who got into the carriage at Croydon for London and was put down short of the platform at London Bridge Station, making a remark that it was a pretty place to tell a lady to jump out, and who assisted the lady to alight, will COMMUNICATE with Mr. J. FOY, 60, Aldermanbury, City, London, he will render the lady a very great service.

PADDINGTON.—The Vestry of this Parish are prepared to receive APPLICATIONS from CANDIDATES for the APPOINTMENT of SURVEYOR. Information as to the duties, salary, and all other matters relating thereto, may be obtained by personal or written application, at the Vestry Hall, Harrow-road, between the hours of TEN and FOUR, daily. Applications, with testimonials, to be forwarded to me on or before MONDAY, the 4th day of JULY next.
FREDERICK AVELING, Vestry Clerk
June 24, 1864.

TO ENGINEERS AND SURVEYORS.
THE FAREHAM LOCAL BOARD of HEALTH are in immediate WANT of a SURVEYOR, competent to prepare all plans, drawings, estimates and specifications required by the Board, to take charge of and superintend all works of drainage and water supply, lighting, paving, cleansing, and repairs of highways, within the district. He will be required to report upon all newly projected streets and new buildings within the district, as to their conformity with the bye laws of the Board. To report all nuisances, and take the necessary steps for their abatement, and carry out all the directions of the Board in connexion with his office. Applications (accompanied by testimonials), stating salary required, to be sent in on or before THURSDAY, the 30th instant.—Further information can be obtained by applying to
ALFRED DRIVER, Clerk to the Board.
Fareham, June 16, 1864.

TO JOINERS.
WANTED, a thoroughly practical and energetic Man as SHOP FOREMAN.—Address, with full particulars, W. BROCK, Steam Joinery Works, Railway Arches, Temple Meads, Bristol.

WANTED, a GENERAL FOREMAN, one that is versed in stonework and scaffolding for heavy weights.—Apply to Messrs. FARSNIDGE & SON, Contractors, Uxbridge.

WANTED, in the Country (a short distance from Town) an experienced SHOP FOREMAN. Wages, 22*s.* per week, and situation constant to a suitable person. A good character will be indispensable.—Apply, by letter prepaid, to C. S. Office of "The Builder."

WANTED, a CLERK, in an English and Foreign Timber Merchant's Office; one well acquainted with the trade, and of good character.—Apply, stating salary, age, &c. to A. Y. Post-office, Chelmsford, Essex.

WANTED, a practical Man, one who thoroughly understands building materials, and keeping builders' accounts.—Apply, stating terms, to A. Post-office, Salisbury.

TO SURVEYORS' ASSISTANTS.
WANTED, a first-class SURVEYOR and DRAUGHTSMAN.—Address, with reference and terms, to RICHARD HORSFALL, Surveyor, Waterhouse-street, Halifax.

Secretary (pro tem.)—A. Platt, esq.
Temporary Offices, 160, Gresham House, Old Broad-street.

ABRIDGED PROSPECTUS.

This Company is formed for the purpose of purchasing and developing certain new and valuable patents for improvements in the drawing and shaping of metals, and for the machinery employed therein. By this process metal tubes can be produced from the finest of a needle to the size required for the largest cylinder, and its products may be applied to numberless other uses with infinitely increased strength and diminished cost.

The Directors, in order to afford those interested a means of testing the commercial value of their mode of manufacture, have erected a powerful hydraulic draw-bench, of 600 tons pressure, at temporary works in Loud-m, C, Willow-walk, Bermondsey, where it has been seen in operation, in consequence of which applications have been received for licenses and machinery, and from these sources alone a large annual income cannot fail to be derived.

Samples of the manufacture can be seen at the Company's Offices; and cards to view the machine in operation may be obtained on application to the Secretary.

Further particulars are given in the detailed prospectus.

Applications for shares must be made either to the Secretary or the Brokers of the Company.

THE HYDRAULIC TUBE DRAWING and STEEL ORDNANCE COMPANY (Limited)—Notice is hereby given, that the SHARE LIST of the above Company will be CLOSED on SATURDAY, the 25th instant (this day), for London, and on MONDAY, the 27th instant, for the country.—By order,

Dated June 12, 1864. A. PLATT, Secretary.
Temporary Offices, No. 160, Gresham House, Old Broad-street, E.C.

PARQUETS SOLIDAIRES. — HOWARD & SONS, 26 and 27, Berners-street, are prepared to supply machine-made patented solid PARQUET FLOORS 50 per cent. cheaper than they have been yet offered.—Illustrated catalogues, plans, and estimates free.

PARQUET FLOORING.
TO ARCHITECTS AND BUILDERS
JACKSON & GRAHAM
Are the sole Agents in England for the superior PARQUET FLOORINGS manufactured by ANTON BEMBE, of MAYENCE & COLOGNE, for which a prize medal was awarded in the International Exhibition of 1862.—Books of designs sent free by post. No charge for taking plans and giving estimates.
33, 34, 35, 37, and 38, OXFORD STREET, LONDON.

ARROWSMITH'S SOLID PARQUET FLOORS.—A SOLID INTERLACED OAK PARQUET FLOOR at 2s. per foot (including fixing), the same price as a plain oak floor. The speciality consists in each separate piece being solid inch thick, grooved, and tongued, and keyed at back (not veneered). References to works done for the eminent architects, Messrs. W. Burn, D. Brandon, P. C. Hardwick, G. G. Scott, A. Salvin, Sydney Smirke, and others, during the last ten years. Show rooms, 8, New Road street, W.

MEDIÆVAL PAPERHANGINGS, from the Thirteenth to the Sixteenth Centuries. Designed by G. T. ROBINSON, F.R.I.B.A. Manufactured by WM. WOOLLAMS & CO. 110, HIGH STREET, near Manchester-square, London, W. May be obtained of the principal Decorators.

Extracts from notices in the undermentioned published journals:—

"Conventionalized patterns, often displaying great beauty of form, characterize the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Athenæum*.

"The designs are exceedingly elegant, and the colouring good and well arranged. Some of the patterns are of strictly ecclesiastical character, suitable for mansion churches and oratories, or they may be used as screens in church decoration."—*Church Builder*.

"The majority of the patterns are exceedingly satisfactory, and not expensive." *Builder*.

"Lines designs are infinitely varied, yet always consistent and effective; the colouring is pre-eminently good, both in the selection of tints, and in harmonious combinations; and the quality of the paper is of the highest order."—*Art Journal*.

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Stranding for Driving-bands, Lathestraps, &c fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-pouches, Bosses, Union-Joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Tailobtype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES,

TO BUILDERS and OTHERS.—Superior RED and STAINED TILES, RED KILN BRICKS, and ORNAMENTAL WARE, in Stock and to Order, at FRIMLIN'S Brick and Tile Factory, Wateringbury, Kent. Can be put into Medway barges, or on the South-Eastern Railway.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 3+ to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

FIRE BRICK and CEMENT WORKS, WOODEN BOX, near BURTON-ON-TRENT.

THE FURNISHING OF BED-ROOMS.
HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of displaying complete suites of Bed room Furniture in the different styles.
Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.
Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.
A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS
The Stock of Mahogany Goods for the better Bed rooms, and Japanned Goods for plain and Servants' use, is very greatly increased The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.
Every attention is paid to the manufacture of the Cabinet work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.
Their Bedding trade receives their constant and personal attention, every article being made on the premises.
They particularly call attention to their Patent Spring Mattress, the Sommier Essex, or Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.
HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham-court-road, London.

TO BUILDERS AND OTHERS.

Insurances against Loss by Fire are effected by the Phœnix Company upon every description of Property, in every part of the world, on the most favourable terms.

The magnitude and liberality with which its engagements are always met by this Company are well known; and the importance of its relations with the public may be estimated from the fact that since its establishment it has paid more than Eight Millions Sterling in discharge of Claims for Losses by Fire.

Insurances with this Company expiring at Midsummer must be renewed within fifteen days thereafter, or they will become void.

Receipts are now ready at the principal Offices, Lombard-street and Charing-cross, and with the respective Agents throughout the United Kingdom.

FIRE INSURANCE, -REDUCTION OF DUTY

ALBERT INSURANCE COMPANY, LIMITED (Fire and Marine), undertakes FIRE RISKS from the 24th JUNE, at the Full Reduction of Duty.

The Premiums charged will be estimated by the individual risk; and the utmost liberality will be maintained in every transaction. Professional men introducing business, will be liberally treated with.

For prospectus and every information, apply at the Offices, 8, Finch lane, or 7, Waterloo-place, Pall Mall; or throughout the Kingdom, of any of the Agents of the Albert Life Office

MORELL THEOBALD, Secretary, Fire Department.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION,

MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall linings, &c. a new Illustrated Catalogue of which can be had at the Pimlico Slate Works, 33 and 46, Upper Belgrave-place, Pimlico, S.W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 458, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, Wharf, Macclesfield-street North, City-road, London, N. 2ndly, that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Jurors," page 681, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Titeries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON, HOLLINS, & CO. Stoke-upon-Trent, beg to inform architects, the gentry, and others, that, in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show-room, at their Establishment, No. 50, Conduit street, London, where experienced draughtsmen will be constantly in attendance, to afford all information required.

DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.

MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

HAMILTON & CO.
No. 10, GREEK-STREET, SOHO-SQUARE, LONDON, W.
Sole Manufacturers of
C. A. WATKINS'S PATENT WIRE-BOUND ROUND and OVAL
PAINTING BRUSHES.
Distemper Brushes, Sash Tools, Stippling Brushes, Gilders' and Grainers' Tools.
These goods are made of the best materials and workmanship, and have obtained a high reputation among the chief decorators in the kingdom. Varnish and Colour Manufacturers, Oilmen, Merchants, &c. are supplied on the lowest terms. Price Lists forwarded on application.

CUMBERLAND'S FERRIOXIDE PAINT should be used by Builders, Engineers, Ship Painters, Contractors, and all who are interested in preserving Iron, Wood, Stone, or Compo. For Ironwork there is nothing equal to it. Its preservative and anti-corrosive properties render it universally applicable. It possesses good body and colour (a rich dark red), and, the greatest recommendation of all, cheapness.
PRICE 20s. PER CWT. Samples sent if required.
MANUFACTURED SOLELY BY
HENRY CUMBERLAND,
CHEMICAL WORKS, MILLWALL, LONDON, E.

JUROR—Class XXVI. GREAT EXHIBITION, 1851.

JUROR—Class XXX. INTERNATIONAL EXHIBITION 1862.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), dated and plain columns, panelled dados, all kinds of diaper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made, it has been used under the direction of Owen Jones, esq., for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

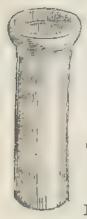
87, BISHOPSGATE STREET WITHOUT, LONDON, E.C.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the Lead or Atmosphere.



ADULTERATIONS.—Some Paint Grinders have been using Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Worth as it is under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEMICAL.—It only takes a proper proportion of oil, a two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 21, LIME STREET, LONDON.

INTERNATIONAL EXHIBITION, 1862. CLASS 10, No. 2268.

BY Order of the Secretary of State for India in Council.—NOTICE is hereby given, that TWENTY-FIVE APPOINTMENTS in the Upper Class of the ELECTRIC TELEGRAPH DEPARTMENT in INDIA will, in the year 1865, be open to PUBLIC COMPETITION.

A COMPETITIVE EXAMINATION will, accordingly, be held in this Office in the month of MAY next.—Full printed particulars of the conditions on which candidates will be admitted to the examination, and also respecting the nature of the appointments to be competed for, may be obtained at this Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W.

India Office, 1st July, 1864

GAS REFORM.—GEORGE FLINTOFF, who has saved the gas consumers of England, Ireland, and Scotland, 200,000*l.* a year, may be ENGAGED to LECTURE, or CONSULTED on GAS ABUSES, STREET LAMPS, NEW JOINT PANELS, and the Means of Securing Cheap Gas.—Apply, W. WRIGHT & CO. 151, Strand, London.

NOTICE.—Mr. LUDWIG DENICKE, of Leipzig, has been appointed AGENT to receive Advertisements, and to supply "The BUILDER," in GERMANY and EASTERN EUROPE.

NOTICE.—LOST.—Should this Meet the Eye of WILLIAM or GEORGE BODLEY, whose two brothers, Robert and Joseph, left England in the year 1848, and sailed for the Cape of Good Hope, they will hear of them by writing to R. BODLEY, Builder, King William's Town, British Kaffraria.

March 21, 1864.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr TYLER, 12, Abingdon street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

72—74, Bishopsgate street Within.

COMPETITIONS.

IRON CHURCH.—Designs and Estimates required for the ERECTION of an IRON CHURCH, with Wood Frame, to seat 200 persons, with and without seats, including a Vestry 8 feet square, and an Entrance Lobby, within three miles from Charing-cross. The lowest estimate will be accepted if the design is approved. Estimates to be sent in on or before WEDNESDAY, JULY 6th, to A. B. care of Messrs. Simpson & Cullingford, Solicitors, 61, Gracechurch-street, E.C.

CONTRACTS.

BOROUGH of STOCKPORT.—The Corporation of this Borough (the Local Board) is desirous of receiving TENDERS for from 300 to 1,000 tons of 6 inch by 3½ inch WELSH SETS, to be delivered at the Canal Wharf, Lancashire-hill, Heaton Norris, or either of the railway stations in the borough, in quantities of not less than 20 tons per week. Samples to be sent with the Tenders. Tenders to be addressed to me, marked "Tender for Welsh Sets," and to be delivered at my Office not later than the 5th day of JULY next—By order,

HENRY COPPOCK, Clerk to the Local Board.

Stockport, June 20, 1864.

STOCKPORT.—NEW BRIDGE.—TENDERS are required for the ERECTION of a New BRIDGE over the River Mersey, at Stockport, on the Estate of C. Howard, Esq. The Bridge will be of brick and stone, in one span of 70 feet.—The drawings and specification may be seen, and Forms of Tender, and all requisite information obtained, until the 30th JUNE inst. on application to Mr. BRIERLEY, Civil Engineer, Blackburn, and, after that date, on application to Mr. MORLEY, Surveyor, &c. George Hotel, Stockport. Sealed Tenders may be sent to the undersigned not later than WEDNESDAY, the 6th day of JULY next.

JOSEPH BRIERLEY, Engineer, &c. &c.

Blackburn, 23rd June, 1864.

LANCASHIRE and YORKSHIRE RAILWAY.—The Directors are prepared to receive TENDERS for the CONSTRUCTION of a BRANCH RAILWAY from Aintree to the North Shore at Bootle, Liverpool. Plans and specifications may be seen, and forms of Tender obtained, at the Engineer's Office, Hunt's Bank, Manchester, on and after FRIDAY, the 24th of JUNE instant, and TENDERS, properly endorsed, and addressed to the Directors, must be delivered to the Secretary not later than TUESDAY, the 12th JULY proximo.

WM. S. LAWN, Secretary.

Manchester, 19th June, 1864.

LANCASHIRE and YORKSHIRE RAILWAY.—The Directors are prepared to receive TENDERS for the BUILDING of a STONE VIADUCT, in lieu of the present wooden structure, called the Mytholm Viaduct, on the Hebden branch. Plans and specification may be seen, and forms of Tender obtained, at the Engineer's Office, Hunt's Bank, Manchester. Tenders, properly endorsed, and addressed to the Directors, to be forwarded so as to be received by the Secretary not later than TUESDAY, the 5th JULY proximo.

WM. S. LAWN, Secretary.

Manchester, 15th June, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a NEW CHURCH at East Molesey, near Hampton Court, Middlesex, may see the drawings and specification at the Office of the Architect, Mr. TALBOT BURY, 50, Welbeck street, London, W. any day between the hours of TEN and FIVE, after TUESDAY, the 5th of JULY. Tenders to be delivered at 50, Welbeck street, not later than SATURDAY, the 16th JULY, addressed to the Rev. A. WILLIAMS. The lowest or any Tender not necessarily accepted.

CONTRACTS.

BLACKFRIARS BRIDGE.—TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and in steps, Roach, Portland, and rough rubble. Also for the handsome columns, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

TO BUILDERS, &c.—The Committee for the Restoration of St. Mary's Church, Shrewsbury, solicit TENDERS for the RESEATING, in Oak, of the NAVE and AISLES of the said Church. The drawings and specifications may be inspected between the hours of TEN a.m. and SIX p.m. at the Parochial Room, St Mary's-place Shrewsbury, on and after 1st JULY next. The Committee do not bind themselves to accept the lowest or any other Tender. Further particulars may be obtained, by application to Mr. S. P. SMITH, Architect, Shrewsbury. Tenders must be sent to the Rev. T. B. LLOYD, Whitehall, Shrewsbury, before JULY 15th, 1864.

THOS. B. LLOYD, Chairman of the Committee.

Shrewsbury, June 25th.

TO BUILDERS.—Persons desirous of sending in TENDERS for the COMPLETION of TWO pairs of HOUSES at Croydon, can, on and after MONDAY next, the 4th JULY, see the plans and specification at the Office of Mr. TEMPLE, 38, High street, Croydon. The lowest Tender will not necessarily be accepted.

R. J. WOOLCOCK, Architect.

TO BUILDERS and CONTRACTORS.—TENDERS are required for BUILDING the TOWER and SPIRE of St. John's Church, Putney Hill, Surrey. A copy of the bills of quantities can be obtained on application to the Architect, Mr. CHARLES LEE, No. 20, Golden-square, St James's, where the Tenders are to be delivered between the hours of TEN a.m. and FOUR p.m. on WEDNESDAY, the 13th of JULY. The Committee do not pledge themselves to accept the lowest or any Tender.

BRISTOL LOCAL BOARD of HEALTH.—To BUILDERS, CONTRACTORS, & OTHERS.—The Local Board of Health of the City and County of Bristol hereby give notice that they intend to CONTRACT for Laying Down, Constructing, and Completely Finishing, certain intended SEWERS, in the Pyrene Intercepting Sewer District, within their District, about 4,400 yards in length. Persons wishing to Contract for the same are requested to forward through the post, on or before THURSDAY, the 14th day of JULY next, by TEN o'clock in the Forenoon, sealed Tenders, addressed to the Committee of the Local Board of Health, 14, Prince-street, Bristol, and endorsed "Tender for Sewers." Any Tender not sent through the post will be rejected. The plans and specifications of the works to be done may be seen at the Offices of the Local Board of Health; and any further information may be obtained, either on personal application or by letter, prepaid, addressed to the Surveyor, Mr. FREDERICK ASHMEAD, C.E. The party contracting will be required to give sufficient security, to be approved by the Local Board of Health, for the due performance of the Contract. The Local Board will not hold themselves bound to accept the lowest or any Tender.

By order of the Committee,

JOHN G. HEAVEN, Clerk.

Local Board of Health Offices, 13, Prince-street,

24th June, 1864.

BRISTOL LOCAL BOARD of HEALTH.—To MASONS and QUARRYMEN.—The Committee of the Bristol Local Board of Health hereby give notice that they are ready to receive TENDERS for the performance of the following WORKS for Two Years, from the 25th of MARCH last.

FOOTWAYS.

For the Supply of Paving Pennant, Curb and Edging, of the best Basham Stone, or Frenchay, Welsh, or other Stone, if of equal quality, and for Setting and Laying the same in the Footways of the Roads, Streets, Squares, Courts, Yards, Lanes, Passages, and Places within the City and County of Bristol, at such times as the said Local Board or their Surveyor may direct. Any person ready to Contract for doing the above mentioned Works is requested to deliver sealed Tenders for doing the same, on or before TEN o'clock on THURSDAY Morning, the 14th day of JULY next, endorsed "Tender for Paving," &c. and addressed to "The Committee of the Local Board of Health, 13, Prince-street, Bristol," where a specification of the Works, the terms of the Contract, a form of Tender, and any other information may be obtained. The Contractor will be required to find two good and sufficient sureties for the due performance of his Contract. The Committee will not bind themselves to recommend the acceptance by the Local Board of the lowest or any Tender, nor of any Tender, until after inquiry and approval of the proposed sureties.—By order of the Committee,

JOHN G. HEAVEN, Clerk.

Office, 13, Prince-street, 23rd June, 1864.

TO BUILDERS.—Persons desirous of CONTRACTING for the REPAIR and RE-ROOFING of the Chancels of the Parish Churches of Minster and St Mary-le-Crypt, Both in the county of Kent, may apply to Mr CHRISTIAN, 88, Whitehall-place, London, S.W., giving References, before JULY 8th next.—Mr. Christian does not bind himself to acknowledge or reply to any such application.

TO BUILDERS.—The Committee of the Willenhall Literary Institute are desirous of receiving TENDERS for their proposed NEW BUILDING. Small Iron Standard. Tenders are to be sent to Mr. J. C. TILDESLEY, the Hon. Secretary, Willenhall, on or before SATURDAY, the 9th day of JULY next. The plans and specification may be seen at applicants' residences.

J. R. WEALL, Architect.

62, Darlington street, Wolverhampton.

TO BUILDERS.—Builders desirous of TENDERING for the ERECTION of a PARSONAGE HOUSE at Great Marlow, Bucks, from designs made by Mr. G. E. street, Architect, can see the plans and specification upon application to the Rev. H. MILMAN, at Great Marlow. No quantities will be supplied, nor does Mr. Milman bind himself to accept the lowest or any Tender.

[*For remainder of Contracts see next Page.*

CONTRACTS.

SAINT MARYLEBONE.—To CONTRACTORS for HOT WATER WARMING APPARATUS on the LOW-PRESSURE SYSTEM.—Notice is hereby given, that the Vestry of the Parish of Saint Marylebone, in the County of Middlesex, will meet in the Board-room of the Court-house of the said parish, on THURSDAY, the 14th day of JULY, 1864, at ELEVEN o'clock in the forenoon, to receive SPECIFICATION and TENDERS for the WARMING by HOT WATER PIPES and APPARATUS.—Further particulars may be known on application to the Vestry Surveyor, Mr. ROBERT SCACE, at his daily attendance at the Court-house from TWELVE till ONE o'clock. Tenders, with plans and specifications, to be sent in sealed, and addressed to the Vestry's Surveyor, and enclosed "Tender for Hot Water Apparatus," before ELEVEN o'clock in the forenoon of the said 14th day of JULY, 1864. The Vestry do not pledge themselves to accept the lowest or any of the Tenders. The Vestry will expect the parties tendering, or their agents on their behalf, to be in attendance at the time of opening the Tenders.—By order,

June 3rd, 1864. W. F. GREENWELL, Vestry Clerk.

TO PAVIORS and OTHERS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City, on TUESDAY the 12th day of JULY, 1864, at half-past TWELVE o'clock precisely to receive TENDERS for REPAVING the Carriageway of Mansion-street, agreeably to a specification, which may be seen at the Office. Persons Tendering are required to give the names and addresses of at least two substantial householders as sureties, to enter into bonds with the Contractor for the due performance of the Contract. The Commissioners do not pledge themselves to accept the lowest Tender, or any, unless deemed satisfactory, and no Tender will be received after TWELVE o'clock on the day of treaty.

JOSEPH DAW, Principal Clerk.

Sewers Office, Guildhall, 28th June, 1864.

TO BUILDERS.—The Guardians of the Chertsey Union, in the County of Surrey, are desirous of receiving TENDERS for certain ALTERATIONS and ADDITIONS to be made at the Union Workhouse, situate in Chertsey. Plans and specifications may be seen at the Workhouse, where the site of the works can be viewed. Copies can be obtained on application to Mr. H. WALKER, Hampton-wick, S.W. the Architect. Tenders must be sent to me, or to the Master at the Workhouse, on or before MONDAY, the 11th day of JULY next. A contract in the usual form will be required. The Guardians reserve to themselves the right to reject the lowest Tender, and they will not be responsible for the quantities furnished by the Architect.—By order of the Board.

HENRY G. GRAZEBROOK, Clerk.

Chertsey, 28th June, 1864.

TO BUILDERS and OTHERS.—The Guardians of the Poor of the Parish of St. George the Martyr, Southwark, will meet in the Board Room of their Workhouse, situate in Marlborough-grove, Southwark, on WEDNESDAY, the 13th day of JULY next, at SIX o'clock in the afternoon, to receive TENDERS from such persons as may be willing to CONTRACT for the ERECTION of a BOUNDARY WALL and such other WORKS as are enclosed Vacant Ground adjoining their present buildings. The plan and specification may be seen at the Board Room any day (Sundays excepted) between the hours of TEN and FOUR o'clock. The Guardians do not bind themselves to accept the lowest or any Tender. By order,

JOHN H. PHIPPEN, Clerk to the Guardians.

19, Union-street, Southwark, June 23th, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of NEW FARM BUILDINGS, at Ravenstein, near Bisley, the property of John F. White, Esq., of Kenyon, in the County of Bedford, may see the plans and specifications, and obtain forms of tender, at the Farm House, from MONDAY, the 4th, till FRIDAY, the 15th JULY (inclusive). Tenders to be sent in not later than TWELVE o'clock on SATURDAY, the 16th instant, to WILLIAM WATSON, Surveyor, Henlow, Biggleswade. The lowest or any Tender will not necessarily be accepted.

Henlow, June 30th, 1864.

SAINT MARY, ISLINGTON.—The Highways Committee will meet at the Vestry Offices, Upper-street, on TUESDAY, the 5th JULY next, at SEVEN o'clock in the evening precisely, to receive TENDERS for the SUPPLY of the BROKEN GRANITE, to be used on those road in the parish now under the jurisdiction of the Metropolis Roads Commissioners.—Forms of Tender, which alone will be received, may be obtained at the Vestry Offices. No Tender will be received after SEVEN o'clock, nor will any Tender be received unless the Contractor and Bank of England note, which will be subsequently returned to those persons whose Tenders are not accepted, but will be retained in the other case until the contract is executed; and in default of the contract being duly executed, the sum deposited shall be forfeited to the Vestry. The Vestry do not bind themselves to accept the lowest or any Tender.

Vestry Office, Upper-street, JOHN LAYTON, Vestry Clerk.

28th June, 1864.

POLICE STATION and INFIRMARY, BISHOPSGATE STREET.—To BUILDERS, &c.—Notice is hereby given, that the Police Committee of the Corporation of London will meet at Guildhall, on MONDAY, the 18th day of JULY, 1864, at TWELVE o'clock precisely, to receive TENDERS for the ERECTION of a POLICE STATION and INFIRMARY, on a plot of ground in Bishopsgate-street, Persons Tendering or agents for Tenders must attend at the Architect's Office, Guildhall, on TUESDAY next, the 5th of JULY, 1864, at ONE o'clock precisely, where drawings, specifications, and Forms of Tender can be inspected, and copies of both of same obtained, on payment of two guineas, which amount will be returned to unsuccessful competitors. The tenders must be sealed up, addressed to the Police Committee, endorsed "Tender for Police Station and Infirmary," and left at the Architect's Office on or before ELEVEN o'clock in the forenoon of MONDAY, the 18th day of JULY next, and the parties tendering are required to be in attendance at one o'clock on that day, at TWELVE o'clock precisely. The Committee do not bind themselves to accept the lowest or any Tender.

WOODTHORPE.

Guildhall, June 30, 1864.

LONDON, BRIGHTON, and SOUTH COAST RAILWAY.—ERECTION of GOODS WAREHOUSE and GRANARY at the Brighton Arms Depôt.—To BUILDERS.—The Directors of the London, Brighton, and South Coast Railway Company are ready to receive TENDERS for the WORKS in the EXTENSION of the GOODS WAREHOUSE and ERECTION of a GRANARY, at the Brighton-arms Station. Plans and specifications may be seen at the Secretary's Office, Brighton, and at the Offices of the Company's Engineer, London Bridge Terminus; and in the meantime Forms only, and endorsed "Tender for Goods Warehouse," may be obtained at the undersigned; and delivered at the Office, not later than ELEVEN o'clock in the forenoon of TUESDAY, the 12th of JULY next. The Directors will not be bound to accept the lowest or any Tender.

FREDERICK SLIGHT, Secretary

London Bridge Terminus, 29th JUNE, 1864.

TO BRIDGE-BUILDERS and CONTRACTORS.—It is proposed to CONSTRUCT a CAST-IRON BRIDGE over the River Stour, at Bishop's Stortford, near the Railway station. Persons desirous of TENDERING for these Works will view the drawings and specification at the Office of Mr. FOWLER, at the Mercers' Hall, Cheapside, on Tuesday, the 5th of July next, and on FRIDAY, the 8th of JULY, between the hours of NINE and SEVEN in the evening, and on MONDAY, the 11th JULY. Tenders to be delivered at, on or before THURSDAY, the 14th JULY, under cover, as usual, "Tender for the Bridge at Bishop's Stortford." The Committee do not bind themselves to accept the lowest or any Tender.—By order of the Bridge Committee.

GEORGE PERRY, Surveyor.

Bishop's Stortford, 28th June, 1864.

Ditto, with silver ring compass, 11l. 10s. 10-inch ditto, ditto, 12l. 0s. 6d. and 12l. 15s. 6d. Best Surveying Instruments, 25 per cent. All other MATHEMATICAL Instruments at Reduced Prices.—Optical and Mathematical Instrument Makers to the Admiralty, having occupied the same Premises, 181, Strand, for upwards of a century.—181, Strand, London.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length, eleven best bedrooms; stabling for eight horses and coachhouses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 28 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell square.

LEWISHAM, KENT, near the Junction Station of the Mid and North Kent Lines.—TO BE LET, TWO PLOTS of GROUND, each for a Pair of Small Villas. Also, a Plot for Three Pairs. Ground rent 3l. per house.—Apply to THOMAS MILLS & SON, Builders and Agents, 28, York-street, Westminster, S.W. Leases 70 years, direct from freeholders. No advances.

WATERSIDE PREMISES, City-road.—Messrs. FULLER & HORSEY are instructed to LET, on LEASE, from Michaelmas next, extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick-built manufactory of two floors, engine and boiler-houses, with 50-horse power steam engine and three Cornish boilers, range of brick built offices, and paved yards with gateway entrances. There is a water frontage of about 207 feet.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

BUILDING GROUND.—TO BE LET, from Michaelmas next, a valuable PLOT of GROUND, adjoining the Lea Bridge Station, with a frontage of 200 feet to the Lea Bridge-road, the total area being five acres and a half. For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views. — Apply to A. B. 192, Bermondsey-street, S.E.

TONBRIDGE, KENT.—FOR SALE, by PRIVATE CONTRACT, Forty-five Acres of most desirable and highly ornamental Freehold BUILDING LAND, a Family Residence, Stabling, and Building Plots adjoining the Town of Tonbridge, having a frontage of 2,300 feet to the London turnpike-road, and 1,020 feet to the Shipborne-road, most admirably adapted, from its position and the extensive and beautiful prospects it commands, for the erection of first-class villas and other residences.—For further particulars, and to treat for the sale of the whole, or part, apply to Messrs. GORHAM & WARNER, Solicitors; or Messrs. CHARLTON & SON, Land Agents, Tonbridge.

TO BE LET, Large and Valuable PREMISES, with water communication, one mile north from the Bank. Formerly occupied by a mahogany merchant, who realized a large fortune there.—Apply to R. & W. STUEGE, Bridge Wharf, City-road, E.C.

TO CARPENTERS and OTHERS.—TO BE SOLD, separate or together, THREE well-built EIGHT-ROOMED SHOPS: one a corner in carcase, in a good situation, in a high road. Price 420l. Ground rent, 7l. each. Lease 99 years. The whole of the purchase-money may remain on first mortgage, if required. To see the above, and further particulars, apply to Mr. BELL, No. 1, Park-side-street, Battersea Park, S.W.

FREEHOLD LAND.—WANTED, to PURCHASE, a PLOT of an ACRE, more or less. The said Plot must be suitable for the erection of a villa, gravel subsoil, and within half an hour's railway ride of Gracechurch-street. Stockton.—Address, full particulars, price, terms, &c. to J. H. MONK, Grove-villas, East Ham, Essex.

FOR SALE, the LEASE of a HOUSE in the best part of Cockspur-street, valuable as a shop or for offices of a public company.—Address, O. P. Office of "The Builder."

FREEHOLD LAND TO BE LET, for Building, in Lyndhurst-grove and Denman-road, near Camden Church, Camberwell.—Plans and terms may be seen, from TEN to TWELVE (except Saturdays), at Mr. SPRIGGS'S, 8, W. Johnson's, Esq. 5, Gray's-inn-square.

CITY ROAD, Saint Bartholomew's Hospital. GROUND TO BE LET, for Building, in Collingwood-street, with immediate possession.—For further particulars apply at Mr. HARDWICK'S Office, No. 1, Henrietta-street, Brunswick-square.

July, 1864. WILLIAM WILBY, Clerk.

TO BRICKMAKERS.—TO BE LET, in consequence of the decease of the late owner, a valuable BRICK FIELD, of about 3 acres, abutting on a main road contiguous to an important town, and only half a mile from a station within about 50 miles of London. The brick earth averages a depth of upwards of 25 feet, and lime is found on the property. It is now in full work, and, as extensive building operations are taking place in the neighbourhood, a ready sale of all kinds of bricks can ready be effected at very remunerative prices.—Apply to Messrs. DEBENHAM & TEWSON, 80, Cheapside.

BUILDING LAND TO BE LET, on Wandsworth Common, close to New Wandsworth Station for Houses to be let at 30l. per annum, which are in great request. Good soil, drained into sewer. Advances made, if carcases built at an agreed price.—For particulars apply to C. W. TODD, Builder, Battersea Rise.

WATERSIDE PREMISES, Pimlico.—TO BE LET, with immediate possession, a WHARF, in Upper Belgrave-place, well adapted for a marble or stone merchant, with office, loading crane, &c.—Apply to CULLEN, HORNE, & EVERFIELD, 44, Parliament street, Westminster, and 80, Fore street, City.

TO MANUFACTURERS, PRINTERS, and OTHERS, displaced by the City Railways.—TO BE LET, on a Building Lease, or SOLD, a valuable PLOT of LAND, abutting on one of the Metropolitan Railway Lines. Trains to the City every fifteen minutes, and the Directors of the Railway will afford every facility for the conveyance of goods from the premises.—For terms apply by letter to Mr. HARRIS, Newsvendor, Princes-road, Notting-hill, W.

MUNSTER STREET, Regent's Park.—TO BE LET or SOLD, extensive PREMISES, suitable for a Builder, or any Manufacturer requiring space. The Premises are in a most spacious Residence-gateway at side, Cartilage-house, large Yard, with Sheds, Workshops, Stabling, &c. and back entrance.—Terms of Messrs. GLASIER & SONS, Auctioneers, 41, Charing-cross; or J. C. MEYMOTT, Esq. 5, Albion place, Blackfriars-road.

FREEHOLD LAND, a BARGAIN.—WOOD GREEN, near Hornsey, Alexandra Park, and the Station.—Capital building-land to be let in Three PLOTS, each having 54 feet frontage each, 145 feet deep, commencing at the rear of the Cemetery-road, 100 feet by 145 feet, and 200 feet by 145 feet, respectively, situate on the beautiful estate of the Conservative Land Society, and numbered 1, 22, 3, 4, and 5. The proposed sewers made and metalled, and water laid on.—Address, P. P. L. Office of "The Builder."

TO BE LET, or SOLD, an Eligible PLOT of BUILDING LAND, No. 17, fronting on Merrick-road, Plough-lane, near Battersea Park Rise, 16 feet by about 87 feet.—Apply to J. A. WILSON, Esq. Surveyor, 85, Norfolk-street, Strand.

LORDSHIP ROAD, Stoke Newington.—TO BE LET, on Building Leases of 61 years (at low ground rents), EIGHT building sites for semi-detached villas and terraces.—Apply to Mr. RODDA, Waterloo-road, Church-street, Stoke Newington. N.B. Bricks supplied on the estate at low prices.

TO CARPENTERS and BUILDERS.—TO BE LET, a convenient DWELLING-HOUSE, with Workshops, Stables, Yard, and Garden, situated at Leigh, within three miles of Tonbridge, in the county of Kent. Rent moderate. — Address, Y. Z. General Post-office, Tonbridge.

WHOLESALE TERMS TO THE TRADE.

BATTY & STEVEN,

HEATING AND VENTILATING ENGINEERS,

Undertake the **Heating and Ventilating of Buildings,** Fitting up with Stoves, Cooking and Hot-water Apparatus, Baths, &c.
Curing Smoky Chimneys,—Altering Defective Work (as has been Mr. BATTY'S practice for Fifteen Years).
They invite attention to their NEW STOCK OF STOVES—CLOSE AND OPEN FIRE-COOKING RANGES—HOT WATER AND RAIN-WATER PIPES—STABLE AND GARDEN FURNISHINGS—RAILINGS, &c. and to the following **PATENTED IMPROVEMENTS,** viz.:—
THE VENTILATING FIRE GRATE, admitting into the room fresh air moderately warmed in a chamber at the back. Grates of all qualities can be constructed on this principle.—(*Favourably mentioned at the Meeting, 2nd March,* 1863, *of the Royal Institute of British Architects.*
A NEW COOKING RANGE—dispensing with the Close Fire Door, besides having the following advantages:—
1. A strong Roasting Fire,—11-inch Fire, Roasting two joints at a time. Superior Ovens for roasting or baking at pleasure.
2. More perfect combustion,—preventing accumulation of soot,—economising fuel. Also removing the smell of cooking from the kitchen.
PRICE, 36 in. to 39 in. 3*l.* to 4*l.* 10*s.*; 42 in. to 45 in. 4*l.* to 6*l.*; 48 in. to 54 in. 5*l.* to 8*l.* 10*s.*; 60 in. to 72 in. 7*l.* to 16*l.*; and upwards.
THE POOR MAN'S COOKING GRATE, having a roasting Fire—a roasting Oven—a Boiler, and Flue for increasing the heat as required, thereby giving results superior to any other Cooking Stove, with a small amount of fuel. PRICE, 30 in. to 42 in. 32*s.* to 48*s.*
THE WARM AIR PAGODA STOVE, radiating the currents horizontally (not upwards), Warming Buildings in a superior manner.
A SELF-ACTING VENTILATOR FOR ROOMS—placed between the joists and ceiling—removing the vitiated air.
THE PYRAMID CHIMNEY HEAD, preventing Chimneys from smoking, and down-draughts. PRICE, 12*s.* 6*d.* to 20*s.*
B. & S. will be happy to give information on Ventilation, and the Repairing and Improving of Heating and Cooking Apparatus.

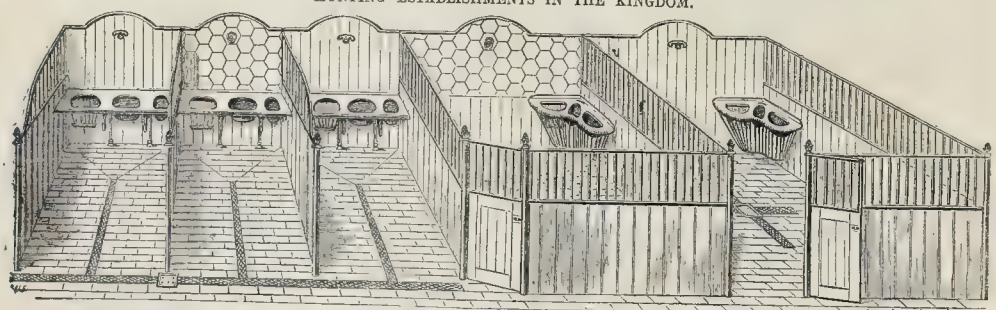
THE PRIZE MEDALS,

LONDON, 1851. PARIS, 1855. LONDON, 1862.

AWARDED TO

COTTAM & COMPANY,

No. 2, WINSLEY-STREET, LONDON, W.



FOR PROGRESSIVE AND GENERAL IMPROVEMENTS IN

STABLE FITTINGS AND HARNESS BRACKETS.

PATENTEES AND ORIGINAL INVENTORS OF

THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,

PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM.

SECURITY FROM ACCIDENT by the use of the Patent Halter Guide and Improved Curved Top-plate; PROMOTION of HEALTH, COMFORT, and CONDITION, by the cleanliness and power of resisting infection of the Mangers and Troughs; and also of the Patent Drop Cover, to curtail the quantity of water to be imbibed. ECONOMY in the USE of FOOD, from the improved formation of the Fittings, and by means of the Patent Portable Seed-box, are some of the peculiar recommendations of Cottam's Patent Componised, Enamelled, and Galvanized Iron Fittings for Stalls and Loose Boxes.

COTTAM'S PATENT COMBINED SADDLE and HARNESS BRACKETS; IMPROVED SURFACE GUTTER, WITH MOVEABLE SAFETY COVERS; Sanitary Traps, Cheap and Durable Corn-bins, and every Article requisite for the Stable and Harness-room.

IRON GATES, FENCING, and HURDLES MADE by MACHINERY.

COTTAM'S newly-invented REGISTERED NOISELESS MANGER SHACKLE and GUIDE FOR HALTER-STRAP, and IMPROVED VENTILATING HARNESS BRACKETS, are only to be obtained from the Inventors, and can be seen in use at their Manufactory.

COTTAM & CO. exhibit for inspection, at their Iron Works, 2, Winsley-street, W., an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

ILLUSTRATED CATALOGUES and LITHOGRAPHS free, on application to COTTAM and CO. 2, WINSLEY STREET, Oxford-street, London, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B. WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

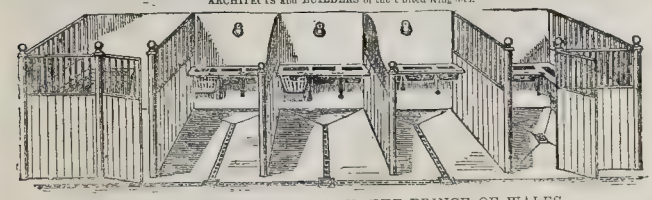
Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. It will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

BUNNETT & Co.

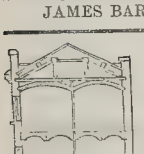
Original Patentees and Manufacturers.



Prize Medalists Great Exhibition

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.

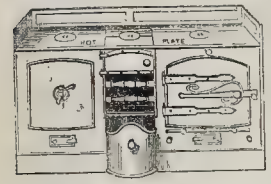


These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H. R. H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well-selected STOCK of STALL and LOOSE-BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the new-erected Practical Stables, now on view. Illustrated Catalogues on receipt of Four Stamps

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.



THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices. Used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has the advantage, that the arches constructed of it are so entirely in one mass (as they cover the space like a compact shell or inverted basin), and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens London."

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT

PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Palaces and Chapels, Admiralty, Horse Guards, many hundred sets without one single Door Handle to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the lock of the knob. Perfect Fit guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, Cut, &c., Brass, Bronzed, Gilt, Carved Woods, Plated, &c., of Every Design

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and Particulars sent on application.

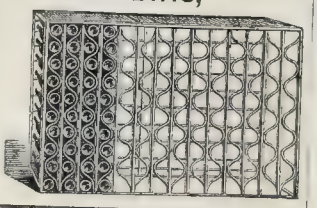
WROUGHT IRON WINE BINS.

FARROW & JACKSON
Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.



Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with
SEPARATE REST FOR EACH BOTTLE,
Peculiarly adapted for Private Cellars.
No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents o the Bin.

N.B. The Iron Buildings manufactured by R. STAP are not fixtures on Leasehold Property.

HOBBS, HART, & CO.'S
MACHINE-MADE LOCKS AND STREET-DOOR LATCHES.

These Locks are recommended for all purposes requiring good security combined with economy of price and durability of wear, as by means of machinery a faultless accuracy is arrived at, which by hand labour would be impossible except at a greatly increased cost.

Architects and Engineers are requested to notice that the security of these Locks consists in a series of Levers, that have to be raised to unequal positions by the bits of the key before the bolt can pass. These will bear comparison with those at treble their cost.

These Locks are made with from Two to Five Levers, and can also be made in suits to differ with Master Keys to pass.

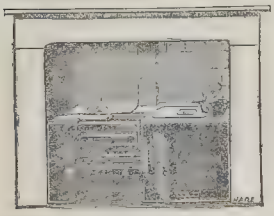
The retail prices of Locks for Cabinet purposes are from 2s. to 4s. each; for Room Doors, 4s. to 9s. 6d. each; Street Door Latches, 7s. 6d. to 18s. each.

This Illustration represents the Two-bolt Four-lever Mortise, with Hobbs & Co.'s Patent Follower, price 8s.

HOBBS, HART, & CO.'S PATENT PROTECTOR LOCKS.

300 Guineas were offered in the late Exhibition (*the only Lock for which a Premium was offered to pick*) to any one who could pick these Locks in thirty days. Their speciality consists in their combining the two essentials of security, viz.—Protection against picking by means of their Patent Moveable Lever Protector, and Protection against Illicit Tampering with the Key by means of their Patent Nozzle Protector.

These all-important principles are the special and peculiar features of HOBBS, HART, & CO.'S Patent Locks These Locks vary in price from 10s. to 50s. each, with Solid Keys. For prices, with Changeable Keys, see 16-paged Illustrated List of Locks, Iron Doors, Safes, &c. which can be had on application.



HOBBS, HART, & CO. 76, CHEAPSIDE, LONDON, E.C.

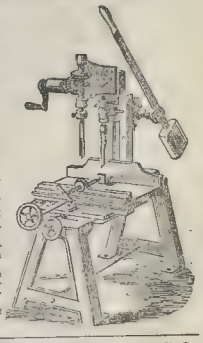
PERIN'S PATENT

FRENCH BAND SAW BLADES.

SAMUEL WORSSAM & CO. having purchased of M. Perin, of Paris, the sole right to import and sell his BAND SAW BLADES throughout the United Kingdom, beg to announce that they are now in a position to supply these Saws from 1-10th of an inch to 8 inches in width, and up to 60 feet in length.

The vast superiority of Perin's Band Saws over any others in point of finish, toughness, durability, and evenness of temper, is now everywhere admitted.

S. W. & CO. keep a large stock of all sizes up to 2 inches wide, from which they can supply orders to any part of the kingdom within twenty-four hours' notice.



For Price Lists, apply to

SMOKY CHIMNEYS,

S. DEACON

Respectfully invites the attention of Architects Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many smoky chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

GENERAL IRON FOUNDERS, GAS ENGINEERS, and WROUGHT IRON TUBE MAKERS.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 2 feet wide is equal to an ordinary Range 3 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, Class 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side by side*; and the ROASTER is constantly replenished with fresh air."

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

WINDOW-BLIND MATERIALS. — H. & J. DOVE, 31, Ludgate-hill, London, E.C. COX & SON'S New Illustrated Catalogue (May, 1862), with 350 Wood Blocks of Church Furniture, Painted Glass, and Decoration, forwarded for six stamps.—Show-rooms, 28 and 29, Southampton-street, Strand.

THE FURNISHING OF BED-ROOMS.
HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.
Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.
Bed Furnishings are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.
A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.
The Stock of Mahogany Goods for the better Bed rooms, and Japanned Goods for plain and servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.
Every attention is paid to the manufacture of the Cabinet work and they have just erected large Workshops for the exclusive use of this purpose, that the manufacture may be under their own immediate care.
Their Bedding trade receives their constant and personal attention, every article being made on the premises
They particularly call attention to their Patent Spring Mattress, the Sommier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress
HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham-court-road, London.

TO BUILDERS AND OTHERS.
WILLIAM SKETCHLEY would call attention to his SAWING, PLANING, and MOULDING TABLE. It is adapted for sawing 12 inch deep and planing 14 inch deep, and moulding 8 inch wide. It is also fitted with drunken saw and slide cramp for tenoning, &c. &c. The piece of deal to prepare 9 inch flooring, 7/8 N.B. The above can be applied to any saw table, and will prepare flooring in a first-class manner.—For further particulars apply to WILLIAM SKETCHLEY, Great George-street, Weymouth.

DAY and GAS LIGHT REFLECTOR MANUFACTURER.—THOMAS FOX, 90, Hatton Garden, E.C. and 263, Thames-street, Hatton Garden, E.C. A large assortment of Silvered Glass Globes, Lamp Spires, &c. always on hand. All kinds of Bent Glass Silvered.

DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.

Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.

Old Zinc laid by Lail will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.

Thin Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

THE LAND SECURITIES COMPANY

(Limited).

Capital, 2 [illegible].

Directors.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq., M.P.
Sir James Fergusson, Bart. M.P.
Col. Fulke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart. M.P.
Sir Laurence Palk, Bart. M.P.
Sir Henry Strakey, Bart. M.P.
William Dargan, esq.
Henry Farquhar, esq.
Sir John Gray.
John Horatio Lloyd esq.
Hon. William Napier.
Hon. Henry Petre.
Sir Charles Rich, Bart.
Granville Richard Ryder, esq.
Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, East End (54, Old Broad-street, E.C.), Office of International Financial Society.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security of

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the negotiation of special investments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S. W.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. which is sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with it. Practical Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

NOTICE TO ARCHITECTS AND THE TRADE.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,

FOR LIGHTING AND VENTILATING PUBLIC AND PRIVATE BUILDINGS.

SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements.

Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.

VOL. XXII.—No. 1117.

Memorial Tablets on London Houses.

"A man, you know, may study in the streets,
And raise his mind above the mob he meets."
Pope.

"Stay, Passenger, why goest thou by so fast,
Read, if thou canst." *Shakespeare's Epitaph.*

R. DYCE, the accomplished editor of Shakspeare, Beaumont & Fletcher and of the works of other Elizabethan dramatists, has preserved among "Ana" well worth remembering, the following breakfast-bit of talk of the poet Rogers:—

"To any one who has reached a very advanced age, a walk through the streets of London is like a walk in a cemetery. How many houses do I pass now inhabited by strangers, in which I used to spend such happy hours with those who have long been dead and gone."

The same sagacious thinker, who had carefully read both books and men through a long life, and to the last, has thus recorded, and in print, a similar sentiment arising from the *Pleasures* of "Memory:"—

"There is a custom on the Continent well worthy of notice. In Boulogne we read, as we ramble through it, 'Ici est mort l'auteur de Gil Blas;' in Rouen, 'Ici est né Pierre Corneille;' in Geneva, 'Ici est né Jean-Jacques Rousseau;' and in Dijon there is the 'Maison Bossuet;' in Paris the 'Quai Voltaire.' Very rare are such memorials among *us*; and yet wherever we met with them, in whatever country they were, or of whatever age, we should surely say they were evidences of refinement and sensibility in the people. The house of Pindar was spared:

"When temple and tower
Went to the ground;"

and its ruins were held sacred to the last. According to Pausanias, they were still to be seen in the second century."

A similar sentiment has been well expressed by Leigh Hunt:—

"I once had duties to perform, which kept me out late at night, and severely taxed my health and spirits. My path lay through a neighbourhood, in which Dryden lived, and though nothing could be more common-place, and I used to be tired to the heart and soul of me, I never hesitated to go a little out of the way that I might pass through Gerard-street, and so give myself the shadow of a pleasant thought."

The "shadow of a pleasant thought," how exquisite the expression: and might not (we appeal to Mr. Thwaites) this association be awakened in thousands were an inscription, something like the following (only better), cut on a stone between the first-floor windows of No. 43?—

"John Dryden,—'And Dryden's epitaph is Dryden's name,'—translated Virgil, and wrote 'Alexander's Feast,' in the ground-room next the street of this house, and dying here, 1st May, 1700, was buried in Poets' Corner, Westminster Abbey."

The shorter the inscription (it must be clear) the better. We like reading in Westminster Abbey, what Scotchmen do not care to read:—"Edwardus Primus Scotorum Malleus, hic est. 1308."

Surely outside the Jerusalem Chamber of Westminster Abbey something might be erected (with *taste*, which does not necessarily mean expense) to the effect that "in this Jerusalem did Harry die." As Mr. George Gilbert Scott, of Westminster Abbey, Bath Abbey, St. Alban's Abbey, and "here, there, and everywhere," seems to be out of *full employment*, he might, in a leisure hour, design something "feasible, if Art conduce."

Proper inscriptions (proper words in proper places) either in prose or verse, for tomb or cup, the dead or the living, are alike rare. We have more than half a wish to see Waller's fine verses on Le Sœur's statue of Charles I. carved on a vacant side of the noble pedestal on which it stands. Surely something might be set up to *explain* "Siste Viator," the standing statue of King James II. at Whitehall. Something like the following may prove suggestive:—

"This statue, by Grinling Gibbons, of James Stuart, Duke of York and King of England (the last of the Stuart kings) was erected, 31st December, 1686, at the expense of Tobias Rustat, a servant of the crown, and having escaped an abdication, a revolution, and a fire, stands where it was first set up."

An inscription over the Czar's Head public-house in Great Tower-street, *akin* to this, would both instruct and delight:—"Peter the Great, when in England, in the reign of King William and Queen Mary, learning the art of ship-building as a common mechanic in the Royal Dockyard at Deptford, was often 'Hail fellow, well met,' with one and all in this tavern."

This in Maiden-lane, Covent-garden, would serve a good purpose:—"Voltaire, when in England, in the year 1726, lodged at a house in this lane called the White Peruke."

This, again, on the large house at the end of Crane-court, Fleet-street, would call up a whole catalogue of associations:—"With reverence look. In this house the Royal Society met from 1710 until 1782. The room is still to be seen in which Sir Isaac Newton sat as president."

Something of this kind on No. 11, Berkeley-square (on the east side) would give an intellectual relish to an ice at Gunter's:—"In this house which he bought and liked, lived in his latter days, and died in 1797, Horace Walpole, the prince of letter-writers in his time."

The house of the Earl of Powis, on the west side of Berkeley-square, might carry an inscription to this effect:—

"In this house, and by his own hand, died, in the year 1775, Robert Clive, Baron Clive. This great man conquered and gave the East Indies to England."

A wall in Bolton-street, Piccadilly, might be thus inscribed, and to an historical end:—

"In this street lay in concealment, in the year 1762, Charles Edward Stuart, 'Bonnie Prince Charlie,' the Young Pretender."

Who that did not know would be otherwise than pleased, and who that did know would be displeased at seeing an inscription to this effect on Sir Isaac Newton's house, in St. Martin's-street, Leicester-square:—

"'Nature and Nature's laws lay hid in night:
God said, "Let Newton be," and all was light.'
Pope.

Sir Isaac Newton lived in this house. From the observatory on its roof, 'he looked from Nature up to Nature's God.'"

Let us borrow from Sir John Herschel part of an inscription admirably adapted to a London house, viz., No. 37, Tavistock-place, Tavistock-square:—

"In this house, in a small observatory, Francis Baily weighed the Earth. 'The building in which the Earth was weighed, and its bulk and figure calculated, the standard of the British nation perpetuated, and the pendulum experiments rescued from their chief source of inaccuracy, can never cease to be an object of interest to astronomers of future generations.'—*Sir John Herschel.*"

Stepping westward of Temple-Bar, let us seek the solitudes of the Adelphi-terrace, and look at the embankments going on (O unrewarded Martin, thy glad spirit,—

"Ev'n in our ashes live their wonted fires,"—

rejoices in thy sea-beat tomb and sea-girt isle). Then, turning to the terrace, let us read in imagination over many-memoried No. 5, these words:—

"In the back room of the first floor of this house died, 1779, David Garrick, 'the perfection of all that was pleasant in man' (*Oliver Goldsmith*); 'whose death eclipsed the gaiety of nations' (*Samuel Johnson*). The most universal and best remembered of English actors."

Ask all the monosyllabic named men we know,—all the Smiths and Joneses,—ask all the "men of colour" we know,—Black, Brown, Green, and White,—ask all who can read and think, if they would not look with Johnsonian St. John's Gate "reverence" at a house in Great Russell-street, Covent Garden, carrying this suggestive inscription:—

"In the back parlour of this house, on Monday, the 16th of May, 1763, James Boswell first saw Samuel Johnson."

Yes, in Tom Davies's back parlour it was,—

"Upon my life,
That Davies hath a very pretty wife,"—

Boswell, of Auchinleck and Corsica, first met Johnson of that "Ilk," or Johnson of Johnson's-court.

A tablet on the *east side* of Leicester-square thus inscribed would call up one of England's greatest painters:—

"'If genius fire thee, Reader, stay.' William Hogarth, 'whose pictured morals charm the mind, and through the eye correct the heart,' lived here. Born, 1697. Died 1764."

The front of Messrs. Puttick & Simpson's auction-rooms, on the west side of Leicester-square, might be made to exhibit with good effect the following inscription:—

"Sir Joshua Reynolds died in this house. One whose art preserved with learned skill the heads of two generations of English intellect, and the faces of three generations of English beauty. The room remains in which he worked such wonders."

In a now uninviting street—Buckingham-street, Fitzroy-square,—and on house No. 7, we should like to see words akin to those:—

"John Flaxman, sculptor, born at York in 1755, lived in this house from 1796 (when he returned from Rome), until his death here in 1826."

In Gray's-inn-lane, over the entrance to Fox-court, an inscribed stone might be erected, to this or a like effect:—

"In this court, on the 16th January, 1696-7, was born Richard Smith, better known as Richard Savage, distinguished alike by his vices and talents. The story of his life has been told incomparably well by Samuel Johnson."

No. 7, Bentinck-street, Manchester-square, should be made to carry:—

"In this house Edward Gibbon wrote part of 'The Decline and Fall of the Roman Empire,' and the whole of his 'Defence' of it."

Over the doorway of St. George's Hospital, we might read:—

"In this hospital died, in the year 1793, John Hunter, surgeon, and something more."

No. 6, Bedford-square, should be made to carry an inscription much in this manner:—

"John Scott, Earl of Eldon and Lord High Chancellor of England, lived from 1804 to 1815 in this house."

Dryden's lines on Milton's "Three Poets," &c. are properly inscribed on the outer wall of the Church of Allhallows, Bread-street. Another City church might bear a short inscription, and to good end:—

"Within this church of St. Benet, Paul's Wharf, on the 26th of June, 1652, was buried Inigo Jones, architect. His tomb, for which he left by will one hundred pounds, was destroyed in the Great Fire of 1666."

We began by referring to the poet Rogers, and will end by relating an anecdote of him which we had direct from his own lips. At one of many breakfasts we had the honour and good fortune to enjoy at No. 22, St. James's-place, we found the poet in his drawing-room in a more than usually pleasant vein. Taking our hand, holding it, and leading us to the window (half smiling, half laughing all the time) he exclaimed, "I have an anecdote for you, and in your way:—'Coming from the City yesterday, I took Fetter-lane, Fleet-street, in my road, that I might see reverentially—the newly-discovered house in which Dryden is said to have lived. I asked for the house, and could for a long time obtain no better reply to my repeated question, "Which is Dryden's house?" than 'Dryden—Dryden' (the policeman I spoke to thinking for a time with his finger, Sterne-like, to his ear)—'Dryden—is he backward with his rent?' That policeman knew to the life the poetical character. I went laughing home, and as you see, am laughing still."

Such, then, are some of the pleasures of memory and association connected with London houses. Let us awaken and maintain them.

PROGRESS OF THE METROPOLITAN SEWERAGE.

THE NORTHERN OUTFALL.*

As explained in our last article, the arrangements for the discharge of the metropolitan sewage of the northern side of the Thames, near Barking Creek, comprise a peculiar two-storied construction of sewers,—three terminating the parallel main lines, and three for a length of 400 feet on a lower level; a reservoir, into which is received the sewage from the upper sewers when these are not discharging direct into the river, and from which it is allowed at intervals to escape by the lower sewers; three tumbling-bay chambers, into which the sewage from the reservoir flows, through two openings into each chamber, and the sewage from the upper sewers falls; and nine culverts, three from each chamber, along which the whole of the sewage finally passes into the Thames.

The three parallel lines on the plan, as we have already said, do not come to the river as they were originally designed. They are now placed nearly in the direction of east-south-east. This helps to increase the irregularity which characterizes the shape of the reservoir.

The north-western angle of this reservoir corresponds with the termination of the construction of three upper and three lower sewers, (originally intended to be 490 feet from the river-wall), and the commencement of the construction of the three sewers carried on arches and concrete piers.† The length of the line of that side of the reservoir which coincides with the sewers, is about 464 feet; but the breadth of the reservoir towards the opposite end, the east, is 678 feet 6 inches, from out to out, not including footings and concrete. The area may differ little in superficies from that of a square; but only one of the corners, the north-east, is a right angle; whilst there are seven other angles of more or less obliquity. The southern boundary line, about 497 feet in length, is parallel with the river-wall: in the northern boundary, a portion, which is parallel, is about 473 feet to an oblique angle, which is 412 feet distant from the north-west corner. The whole area is said to be about 10 acres.

This reservoir is divided into four compartments which are capable of being used separately. They are spoken of as Nos. 1, 2, 3, & 4, counting from the river. The division-wall between the first two compartments, is parallel with the southern external wall, throughout the length; but as the breadths of the reservoir at the east and west are different, only the eastern halves of the two other division-walls are parallel; that is to say, they have an angle, similar to that in the northern external wall, about midway in their length. The reservoir is vaulted over from piers and arches; and the vaulting throughout runs parallel with the southern boundary, or so as to cut the western portion of the northern external wall, and the similar portions of the division-walls, obliquely, and so as to be cut by the greater portion of the eastern external wall, and by the line of the sewers also obliquely. There are ten bays of vaulting to each compartment, counting in the widest part of the reservoir.

The level of the floor of the reservoir at the lowest point, where next the sewers, is placed at 2 feet 9 inches above Ordnance datum, or 8 feet 9 inches above the level of the inverts of the nine outlet-culverts at their point of discharge, and 2 feet 9 inches above that of the crowns of the arches. The level of the floor at the opposite end of the reservoir, the east, next the Creek, is 5 feet 3 inches above the datum: or there is a fall of 2 feet 6 inches in a length of 643 feet 6 inches. The clear height, or depth, of the reservoir varies from about 17 feet 6 inches (measured in the centre of a bay to the crown of the vaulting), to 15 feet. The dimension to the crown of the arch from the footings of the brickwork may be taken as uniformly 21 feet 3 inches, and the depth of the concrete as about 19 feet below the footings. The thickness of the crown of the arch is 9 inches; and upon this there is a thickness of 3 feet 6 inches of earth, bringing the top of the covering of the reservoir to 12 feet above Trinity High Water Mark.

The concrete generally carried down to the depth of 20 feet below Ordnance datum, the footings are based at 1 foot below the datum; and the floor-level at the lowest point may be stated as 3 feet 9 inches above the bottom of the footings,—the level of which last was about 7 feet 6 inches below the average surface of the ground. The concrete under each of the piers measures on plan 5 feet 9 inches by 5 feet: the footings are also embedded in it; and the whole of the bottom of the reservoir is paved with 3-inch York paving laid on concrete 9 inches in thickness. The floor takes the form of a series of inverted arches, or approximately, so as to provide a channel in each bay, for the last dregs of the sewage running from east to west.

The concrete of each detached pier nearest the external walls on the Thames and Barking Creek sides, is carried across in widths of 5 feet to join the concrete under those walls. The concrete under the division-walls varies from 8 feet to 10 feet in thickness. In several places, different arrangement of the concrete must have been required, to that shown on the original drawings.

The external walls where not strengthened by counterforts of the brickwork are 3 feet in thickness: but the north and south walls are 2 feet 3 inches in thickness; and, to make up a thickness of 3 feet 9 inches, they have, besides a counterfort opposite each main rib of the vaulting, of the breadth 1 foot 6 inches, two intermediate counterforts in the length corresponding to the 22 feet 3 inches of the space between the ribs and the projecting faces of the internal piers. The spaces between the external counterforts are filled in with the concrete; and a sloping bank of earth surrounds the reservoir.

There are ten bays of vaulting, as stated, to each compartment, counting across the widest part of the reservoir, the vaults running east and west, and springing from piers and arches. Eight of the ten bays have each a clear span of 15 feet; whilst each outer bay has a span of 14 feet 6 inches. Each vault has a rise of 3 feet 9 inches, and is divided by transverse strengthening ribs, which spring from the piers, and are at the distance of 22 feet 3 inches from one another. They measure 13½ inches on the soffit; and are 1 foot 10½ inches in thickness, including the vault. The detached piers are cruciform on plan, and measure 3 feet 9 inches by 3 feet 4½ inches on the extreme breadth. The longitudinal arches carrying the springers of the vaults, have a span each of 20 feet, and a rise of 5 feet from a skew-back that forms a splayed set-off to the face of the pier, which below the arch-springing has a breadth of 2 feet 3 inches. These arches with their spandrels, and the courses of brickwork over them, are 18 inches in thickness. All the arches and vaulting are segmental.

Eighteen openings in the vaulting are provided; and circular shafts, 4 feet in internal diameter, are carried up from them to the surface of the ground over the reservoir, where they are coped with Bramley Fall stone, and fitted with an iron frame, and a perforated plate which may be removed should the reservoir require to be cleansed by other means than flushing; or should deposit, left, or produced by mechanical or chemical means, be in demand as capable of utilization. The openings serve also for ventilation and lighting.

On the outside of the vaulting, the spandrels are carried up solid to 2 feet 3 inches above the springing-line; and spandrel walls, 13½ inches thick, are filled in up to the level of the soffit of the arching, and at clear intervals of 6 feet 8 inches in the length of the vault. A channel or drain was to be formed in the solid spandrel, and covered with tiles, to discharge into the reservoir at each pier through a 2-inch stoneware pipe, built into the brickwork. For the earth-covering, a layer, 9 inches in thickness, of well-tempered clay was first to be laid next the arching, so as to drain into the channels in the spandrels; the space over which, for a width of 2 feet, was to be covered to within 6 inches of the surface, with clean gravel. The remainder of the earth-covering was to be of suitable material, and was to be sown with grass and clover seed. Around the reservoir, clay was to be deposited in layers well punned, the original slopes of the river-bank being cut into steps: earth was to be filled in; and slopes were to be finished to an incline of 1½ to 1, and sown with seeds. We believe these minute details have been observed generally; but broken stone, for the drains, was being deposited in the spandrels, at the time of our visit.

The reservoir at the west, though we have described it as skirted by the sewers, is actually separated from them by a *trough*, so-called, 6 feet in the clear width, or by what is rather to be described as a trough to each compartment of the reservoir. This "trough" is 35 feet in height or depth: its floor is 10 feet lower than that of the reservoir; or, otherwise stated, the level is 1 foot below that of the inverts of the nine culverts at their outlet-ends; whilst the inverts of the sixteen penstock-openings of egress, which lead into the three lower sewers, may be described as generally 6 inches above those inverts. It is desirable that there should be liquid in the trough to break the force of the cascades from the sixteen penstock-openings of ingress, or of the upper level. The lower penstocks being closed during the filling of the reservoir, a depth of 10 feet of sewage would be at all times in the trough,—unless, indeed, these penstocks were kept open till the time of low-water. But the whole arrangements suppose the stoppage of the flow into the river, and the recommencement of storage, long previous to that time. The upper tier of sixteen openings, terminating transverse connexions of the three upper sewers, have their inverts placed corresponding with the level of the inverts of those sewers, which is, as explained in the last article, about 1 foot 4 inches below Trinity high-water mark. The covering of the trough, of large Yorkshire landings, 6 inches thick, on iron girders, is carried up 4 feet 6 inches above the top of the embankment and covering of the

* See page 467, *ante*.

† It should have been explained that this latter method of construction was not used except where the concrete would be wholly below ground. Where the surface of the ground, in the line from Old Ford, was low, the sewers indeed were carried on concrete; but it formed a continuous substructure, and core to the embankment. The embankment itself,—only varied in the core, and substructure of the sewers, and where crossing over streams or ways,—extends throughout the distance from the junction of the High and Middle-level Sewers.

reservoir, and forms a terrace, where the lifting-gear of the thirty-two penstocks is worked.

The central division-wall of the reservoir, and the greater part of the length of the walls between compartments Nos. 1 & 2, and 3 & 4, respectively, may be described as constructed each of two external 9-inch walls at a distance of 3 feet, tied together by cross-walls 13½ inches thick, and 6 feet 8 inches apart, and having the cavities filled with concrete. For the lengths of 246 feet in the division between compartments 1 & 2, and 290 feet in that between compartments 3 & 4, the concrete filling-in is omitted, the walls have a thickness of 1 foot 10½ inches, the upper part of the cross-wall is carried on an arch (so that there is clear way for the stream), and the walls are coped with Bramley Fall stone, whilst the springing of each vault is carried by dwarf-piers in such manner that there are openings 4 feet 4 inches in length and 12 inches in height, and a lipped and throated formation of the capping, to complete the arrangement for weirs or overflows from the reservoir. In short, the openings, cavities, and 3-feet passage-way, in each of these two lengths of division-wall, are to answer the same purpose as the trumpet-mouthed stand-pipe of a common cistern. The floor in the trough here takes the same level as the floor of the reservoir; and one of the drawings shows the opening into the sewer at the same level; whilst at this point, the arrangement of the "trough" becomes that of a square shaft quite disconnected from the two compartments or troughs that it separates. The floor between the weir-walls, and the floor of the trough, are paved with 6-inch York landings; whilst the walls for a height of 6 feet 6 inches are faced with the Staffordshire bricks, all headers, the inner half-brick rim of the arch of the tie-walls being of the same description of bricks.

The wall between each compartment of the reservoir and the trough is pierced with openings, 16 feet 3 inches in height and about 14 feet in width, with piers of 3 feet 9 inches between; and their sides and inverts are lined with the blue brick.

The reservoir is flushed from a culvert, 6 feet in width, and about 6 feet 3 inches in height, which extends along the greater portion of the breadth of the reservoir, but external to it, at the east end, and which is supplied with water of the Thames, from a length of 36-inch iron piping. The culvert communicates with the reservoir, by three openings to each of the four compartments. Each opening is 2 feet 9 inches by 3 feet, and is faced and lined with Bramley Fall stone; and floored, like the culverts, with 4-inch York landing. The culvert also is lined with the blue bricks. Each of the twelve openings is fitted with an iron penstock door or valve. The valves are worked each by a worm-spindle which passes up into a stone built into the vaulting, and fitted with a cast-iron box to receive the squared end of the spindle; which last there receives the end of a moveable "spanner" that is turned from the level of the ground over the reservoir. The worm-end of the spindle works into a rack fixed down the front of the penstock valve or door, the edges of the valve being guided by grooves. The floor of the reservoir in front of the openings, is paved with Port Nant granite cubes, 7 inches deep, for an area of 6 feet in width by 10 feet in length, laid in cement. Attached to each penstock is a man-hole opening, 3 feet by 2 feet 6 inches, fitted with the usual arrangement of cover and safety-grate, and having below it the requisite foot-irons for descent. On the occasion of the visit spoken of in our last article, the reservoirs had been that morning flushed out; and some of the water still remained at the lower end. We descended, however, and walked as far as the water would permit, or for about two-thirds of the length. Some slight deposit was left, after the flushing, or about the piers; but there was very little stench. A penstock similar to the others, is fitted to a chamber which forms the junction between the iron piping and the flushing-culvert.

The iron piping, which extends to the outer edge of the reed-shore, or about 117 feet in length, was specified to have 6-inch socket-joints, packed with yarn and run with lead; and the pipes were to be steeped at the foundry in "Dr. Angus Smith's patent solution." The piping was to be imbedded in Portland cement-concrete laid in a trench. The work required great care, and a separate coffer-dam was we believe used in the laying. A large dam was required for the reservoir generally. At the end, of ingress for the flushing-water from the river, there was a protecting framework to the pipes, comprised of four 12-inch piles, with 15-inch capping-timbers, and on each side a walling-piece of 12 inches, and further strengthened by iron bolts and plates.

The arrangement, construction, and manner of working the penstocks in the "trough," requires some more words. There are, in all, thirty-four openings between the "trough" (or four troughs and two shafts), and the construction of upper and lower sewers. Two of the openings connected with the overflow-chambers and weirs, are always free for the passage of sewage out, in the event of their being needed. The thirty-two other openings, sixteen in the upper level and sixteen in the lower, are provided with penstock-valves, or sliding-doors, in the manner to be described. There are four pairs of the valves to each compartment of the reservoir, each upper penstock being at a distance of 16 feet 7½ inches above the lower penstock, measuring from invert to invert. Each upper penstock is 5 feet by 6 feet 8 inches in the clear; and the lower penstock is 3 feet 3 inches by 6 feet. The valves are calculated to sustain a pressure on either face, of a column of water, 14 feet in height for the upper perstock, and 30 feet for the lower. The valves and their seating are generally similar to one another; but the lifting-screw to the upper valve works in a tube, cast upon the centre-line; whilst to the lower one, there are two lifting-screws, which work in side-boxes or seatings for nuts. The spindles of the three screws are continued upwards to the landing already mentioned; below which, each has a toothed wheel; and the central spindle continues above the landing, into a hollow standard and winch-box, where the spindle is so contrived as to allow of the transmission of the motion direct to its own lifting screw, that of the upper penstock, and not to the side screws of the lower penstock, or otherwise to the side lifting-screws and not to the centre one; so that one driving motion will serve for either valve. Each valve has two wrought-iron wedge-hooks at the crown, and two tail-wedges at the invert, arranged with adjusting cotters and pinching-screws, so as to secure tight-fitting to the valve-seat and opening.

The penstocks to the ends of the main outlet-sewers, three in number, of the upper level, are somewhat differently contrived. Each valve, there, is worked by a windlass and the power of four men; and one long counterbalance weight is suspended by chains which pass over toothed wheels; whilst there are extra contrivances for strength of the valve, and for close fitting. The machinery of these large penstocks is carried by iron girders. The penstock-house, which is attached to the residence, is arranged as a kind of loggia or inclosed portico, with nine iron columns, bearing segmental arches and eaves-guttering; and there are three oak girders to be used in hoisting. Decorative character is given to the building generally, by arch-headed windows, brick pilasters, and stone dressings.

The brickwork of the reservoir is built in Portland cement (specified to be not less in weight than 110 lb. to the bushel) mixed with an equal portion of sand. The external work had the joints raked out, and pointed with neat cement. Hoop iron-bond was laid in every fifth course of the work, two widths for every brick in thickness. The bricks to be used generally were to be the best description of picked stocks; but much difficulty, we believe, was found in getting those which were originally contemplated. Very great care, however, has been given to the materials and work in every particular. The inside of the reservoir is faced with shippers or paviors. The concrete, of which the quantity used about the reservoir, and along the line of sewers-embankment, must have been enormous, is formed of blue-lias lime and Thames ballast, in the proportion of one of the former to six of the latter. In the schedule of prices referred to in, and forming part of, the specification and conditions, the brickwork of Portland cement and picked stocks, was set down as 16*l.* per rod; and that in which the shippers or paviors were used, as 18*l.* per rod. The concrete was to be 7*s.* per cubic yard.

The original contract-sum for the line of outfall-sewers from the west bank of the Lea, was 625,000*l.* That for the reservoir was 164,000*l.* What the actual cost of either division of the work has been, cannot be stated at present.

The whole work of the outfall-sewers and reservoir combined has been superintended by Mr. Edmund Cooper, as resident engineer under Mr. Bazalgette's direction. Mr. Cooper had previously conducted the works of the High-level Sewer, including the construction at Old Ford; and much credit is unquestionably due to him. Mr. George Furness, the contractor, and his manager and agent on the works, Mr. Broome, also deserve to have their names connected with this great undertaking of the Northern Outfall. The bulk of the comprehensive work, including details of great importance, as in the iron culverts, and the crossings generally of streams, roads, and railways, we have not attempted here to describe.

ON CIRCULAR ROCK-MARKS AND OTHER SYMBOLS.

CERTAIN rock-markings in Northumberland, of recent discovery, have of late been exciting a good deal of interest amongst archæologists, from their enigmatical nature, as well as from their multiplicity.

I propose, with your permission, to string together a few notes on this subject, as they occur to me, in connexion with other symbols of an apparently kindred nature, and with some relative matter of a miscellaneous description.

My attention was first drawn to the rock symbols of Northumberland by an article, with engravings, in the *Illustrated News* of 19th March last. From this article I may, in the outset, condense a brief descriptive extract; appending, also, a copy of one or two of the illustrations.

Incised Rock-Markings, of unknown Import, in Northumberland.

There have lately been noticed, upon some bared rocks in the flanks of the Cheviot hills, various incised markings, which are supposed to belong to a very remote period of British history. They consist, for the most part, of a central *depression*, round which one or more circles are drawn. Occasionally a number of dots are placed outside the outer circle. They show considerable differences of detail. The number of them is surprising. The district about Doddington, in which these circles abound, is characterized by the presence of *Celtic* remains—such as *barrows*, *stone circles*, and camps. These markings are not confined to Northumberland: they occur in several places in Scotland, particularly at Lochgilphead, in Argyleshire. Some, of spiral character, are found in Ireland. Others, wavy in their form, are met with on the stone circles and cromlechs of Brittany. One very interesting fact connected with these enigmatical figures is, that in several instances they have been found upon stones covering Celtic interments. No satisfactory answer has yet been given to the question which naturally arises, —What purpose were these strange devices intended to serve? The fact that they occur on stones used for covering the remains of the dead seems to indicate that *they have a religious significance* in relation to the rites of sepulture. The Duke of Northumberland has taken measures for having accurate representations of the Northumbrian examples executed in lithography, together with the most characteristic specimens which may be noticed elsewhere. Some well-known antiquaries are actively engaged in carrying out the designs of the duke; and these have appointed Dr. Bruce, of Newcastle-upon-Tyne, to conduct their correspondence.

One of the illustrations, with three concentric circles, is as under;—

and it is accompanied by two other and smaller ones, as here also given.

Another consists of seven concentric circles, with a single rough *branch-* or *root-*form, forked at the outer circle, and pointed at the central depression. The small marks adjoining the three-circled symbol here given show that not only does a single circle, with its central point, or hollow, occur; but the central point even without any circle: this is of frequent occurrence; and, with the pointing of branched and other stick-shapes always towards the centres of the concentric circles, is seemingly intended *to fix the attention, above all, upon the central point.* Sometimes a single branch or root-shape is even hooked, *like a bishop's staff*, round the centre.

Similar marks, but spiral in character, as said,

do occur in Ireland, and wavy ones in Brittany. In Ireland, however, not only do spiral ones occur, but also the concentric circles themselves, with their central mark, and a rayed circle, or circle surrounded by radiating lines,—as at Dowth, in a mound chamber, or "sorcery hall" (as such chambers are described to have been, in a Runic inscription recently discovered within the one at Maeshowe, in Orkney). In the Dowth sorcery hall, too, strange to say, there is a wheeled cross, like that of the Persian ferocher, pharaoh, fairy-guardian, or guardian angel, of kings, which, by the way, was also rayed. The concentric circles, the rayed circle, and the wheeled cross, of Dowth, are all three carved on one stone. Concentric circles and wavy marks, as well as spirals, also occur at the celebrated "sorcery hall," or artificial "cavern of initiation," within the immense pyramidal mound of New Grange: there are double and concentric spirals at the mouth of the "transe" or passage into the sorcery hall of this pyramid, as if to denote two contrary processes connected with a single centre, one concentrative, the other radiative; but of this I shall again have occasion to speak.

It is notable that on the slabs from Carthage, illustrated by Mr. Godwin in the *Archæologia*, and referred to in my letters on "Geometrical Symbols" in the *Builder*, there is a symbol amongst the angular ones of precisely the same class with the Northumbrian rock markings. It consists of the single circle and central point. The very same symbol occurs in connexion with the N or initial "wavy" symbol M and the figure of Minerva on the coins of the Ariarathan prechristian kings of Persia. In the Hindu cavern of initiation at Salsette, too, amongst an innumerable multitude of symbolical figures with which the walls are covered, and among which the lingam and the yoni are conspicuous, these are typified by the petal and the calyx of the lotus, and *by the point within the circle.* Indeed, it is well known that not only amongst the Hindus, the Egyptians, and the Druids, but throughout the Gentile nations generally, the central point within the circle prevailed, at one time, as a symbol which involved a similar sense, but obviously of a religious and mysterious character, although mistaken for a mere stupid sensual symbol.

In his book on "Signs and Symbols," the Rev. Dr. Oliver, the Freemason, has some remarks on the circle and central point, or point within a circle, which I may here condense, as matter already collected from various sources, and not because I quite agree with the reverend doctor, either in his own interpretation or in those which he has compiled from others; but simply to show briefly and at once what has already been thought and said on this curious subject.

The circle referred to eternity, and the central point to time. The Garden of Eden was of a circular form, and the tree of life was placed in the centre (Gen. ii. 9). Now, as the fruit of this tree was reputed to convey the privilege of immortality, the centre would hence be esteemed the most honourable situation, and be ultimately assigned to the Deity. The tribes contiguous to Judea placed a jod (י) in the centre of a circle, as a symbol of the Deity, surrounded by eternity. The Samothracians had a great veneration for the circle, and hence rings were distributed to the initiated as amulets, possessed of the power of averting danger. The first settlers in Egypt transmitted to their posterity an exact copy of our point within a circle. The widely-extended universe was represented as a *circle* of boundless *Light*, in the *centre* of which the *deity* was said to dwell. The number *One* was the point within the circle, and denoted *the central Fire*, or God. The point within the circle afterwards became a universal emblem, to denote the temple of the deity, and was referred to the planetary circle, in the centre of which was fixed the sun, as the universal God. Servius tells us that it was believed that the centre of a *temple* was the peculiar residence of the deity, the exterior decorations being merely ornamental (Serv. Georg. 3). Hence the astronomical character used to denote or represent the sun is a point within a circle, because that figure is the *symbol of perfection.* The most *perfect* metal, gold, is also designated in chemistry by the same character. With this reference, *the point within a circle was an emblem of great importance amongst the British Druids.* Their temples were circular, many of them with a single stone placed in the centre. Their solemn processions were all arranged in the same form; and without a circle it was thought impossible to obtain the favour of the gods. The rights of divination could not be securely and successfully performed unless the operator were protected within the consecrated periphery of a magical circle. It is remarkable that, in all the ancient systems of mythology, the Great Father, or the Male Generative principle, was uniformly symbolized by a point, within a circle. In the latter ages of idolatry *the point within a circle*, with an unequivocal allusion to the phallic worship, *was the principal object of devotion with every people in the world.*

St. Augustin has some remarks on the circle and centre which bring us, I think, much nearer to the true ancient ideas originally involved in this symbol than anything else, almost, which Dr. Oliver has succeeded in collecting together on the subject; inasmuch as St. Augustin speaks here of the human soul and its specialities of action in such a way as to show forth its evidently concentrative nature. He says,—

"As, in a circle, however large, there is one middle point, whither all converge, called by geometricians the centre; and, although the parts of the whole circumference may be divided innumerably; yet is there no other point save *one* which all measure equally, and which, by a certain law of evenness, hath *the sovereignty* over all. But if you leave this one point, whatever point you take, the greater number of lines you draw, the more everything is confused. *So the Soul* is tossed to and fro by the very vastness of the things, and is crushed by a real destitution, in that *its own nature compels it everywhere to seek* ONE object, and the multiplicity suffers it not!"

The Jewish "sephiroths," or "celestial splendours," are denoted by a symbol curiously akin to the concentric rock symbols. The sephiroths were *sometimes symbolized as a tree; sometimes as a series of concentric circles*, the outer one of which was called "The Crown," *and the inmost or central space* "*The Kingdom.*" And this reminds me of certain symbols of my own invention, intended to denote the connexion of the radiative and concentrative life principles, or Spirit and Soul; and used by me as such for many years before I ever heard of rock symbols, points within circles as symbols, or cabbalistic sephiroths. With your permission, I shall here illustrate by diagram one or two of these, which will at least show a curious coincidence with the nature of those admittedly mysterious symbols with which I am at present dealing.

In a note-book, of date 1834, herewith presented for your inspection, I have incidentally used, as I have ever since occasionally done, a point to denote the concentrative, and a circle to denote the radiative, while *the conjunction between the two* was denoted, as you will perceive, by *the point within the circle.* In the same volume and page a circle is filled with arrows, in black ink, concentrating towards the centre, in order to denote the concentrative or personal *Life* principle, or Soul; and with arrows, in red ink, radiating from the same centre, to denote the radiative or Spiritual principle, or *Light* of the Soul. In another of these old note-books, of date 1833, I have incidentally used the annexed rock-mark-like symbol, as you are aware; the upper arborescence, or *branch*, in red ink, to denote the radiative; the lower, or *root*, in black ink, to denote the concentrative; and the three concentric circles to denote the three great subdivisions of the mental radio-concentrative organism, — positive, comparative, and superlative, — with the central point to denote "the Head of every Man"—the Centre of every Soul,—the one common and Sovereign Centre of both concentrative and radiative, Life and Light, or Soul and Spirit, and "the straight and narrow *Way*" of translation, by ecstatic entrancement, from the concentrative life to the radiative,—from earth to heaven,—and of "thence returning;"—for the complete psychological and spiritual meaning of all which already explained mysteries I must here refer to my previous letters on Symbolism, in the *Builder.**

As every one will readily perceive, who has read the letters referred to, such symbols as those now under consideration, like the angular ones before treated of, *arose naturally out of ideas* such as those originated and entertained by me in regard to the concentrative and radiative principles of life and of religion; and, doing so, the coincidence with the general drift of meaning, as well as of form, in the Jewish sephiroths and in the Gentile circle and centre, as well as with the general form of the rock and sorcery-hall symbols, whatever was *their* meaning, must also be obvious, and must tend to induce the idea that *in all* there is embodied one and the same original meaning,—namely, that meaning which led naturally to the reinvention of the very same symbols, in order to illustrate that one meaning. In respect to the Jewish sephiroths, especially, I would wish to point out the circumstance that the "celestial splendours" indicated were symbolized, as Maurice, in his "Indian Antiquities," p. 566, mentions, sometimes by concentric circles, and sometimes by a tree,—in short, by *almost* the identical forms of the rock symbols, and by *precisely* those two methods which sciential principles of my own have led me, as already shown, to combine together into one compound symbol. And, in respect to the Hindu, Egyptian, Druidical, and even Jewish *point within a circle*, which symbol, as we have seen, is also identical with one of mine, denotive of the conjunction of the concentrative and radiative principles of life, animate and spiritual, I would wish to remind those who have read my former letters, that a sexual idea is also necessarily embodied in my use of such a symbol, just as it has been among the Hindus and other nations, the concentrative being the masculine and the radiative the feminine, encompassing it as a "crown of glory."*

Is it not probable, then, that the very same principles as those denoted by my own symbols and those of the Jewish sephiroths, and by the universal point and circle symbol, were at one time understood or intended by the original inventors of the closely-analogous rock and sorcery hall symbols, which are at present exciting so much interest as to their hidden meaning?

There is a peculiarity of the rock symbols to which I must now advert,—that is, their interminable repetition. To what purpose could this lavish multiplication of one and the same symbol have been subservient? To answer this directly and satisfactorily we ought first to really know their actual meaning; but, independently of any such knowledge, I might reply, like a true Scotsman, by means of another question. To what purpose can the interminable repetition of the Buddhist "Om mani" be subservient? There is something curiously analogous here. The sentence "Om mani padme houm," is a prayer which is repeated and repeated in millions of instances, inscribed everywhere throughout all Thibet,—in the temples, in the streets, on the roads, on the rocks, on the monuments or manis, in the houses: everywhere and at all times have the Thibetans before their eyes the never-to-be-forgotten "Om mani padme houm," which pervades their land. Not only so, but they have everywhere "praying-wheels," to be whirled about, and containing nothing else but interminable repetitions of the *Om mani*;—and in concentric circles too! Thus, in a description, given by Mr. William Simpson, of one of his water-colour drawings, of a Llama's praying-cylinder, he says;—

"These praying-machines are composed of cylinders which are made to revolve, a spindle passing through them. On this spindle are threaded a vast number of circular pieces of paper, corresponding with the diameter of the cylinder: on each of the successive layers, a mystic sentence is written; and repeated again and again, in concentric circles, until the whole surface is covered; and these are deposited one over the other until the entire bulk is filled."

The mystic sentence so repeated, as I have said, is the *Om mani*, of the meaning of which Sir William Jones gives an amplified paraphase, to the effect that *it is a prayer for illumination by the Divine Sun.* And it is so, if what Abbé Huc and others tell us be correct. The Abbé says that in Thibet an impressive spectacle occurs every evening, as the sun is setting, when every Thibetan *prostrates himself*, wherever he may be, or whatever he may have been doing, and repeats the *Om mani*, which is thus interpreted;—Oh, may I (now) attain *perfection!*†

It is not the Buddhists alone, however, who venerate the mystic name of "Om." The Hindus are taught by their religion to meditate on this mystic name; ever repeating, monotonously, the one identical monosyllable, Om, Om, Om, Om, in silent thought; the great religious purpose of *calling on Om* being to produce, by his help, the state of divine entrancement, illumined rest [in the light of the Divine nocturnal Sun], or holy "repose."‡ Much the

* See, especially, the letter on Geometrical and other Symbols, with Psychological Key, of 11th July, 1863.

* The Lord hath created a new thing in the earth: a *woman* shall *compass a man.*—Jer. xxxi. 22. She shall compass thee *with a crown of glory.*—Prov. iv. 9. This compassing crown of glory, then, which is as a woman to a man, a bride to a bridegroom, and a spirit to a soul, must be what is meant by the outer circle of the Jewish sephiroths, or celestial splendours, which circle is called "The Crown"—the crown of splendours—the crown of glory. Thus the one common idea embodied in circle and centre is brought home even to the sephiroths of the Jews, and from their own sacred Scriptures.

† The Buddhist practice of prayer seems very absurd in the eyes of professing Christians; but let them remember that, according to their own principles, to pray aright is to "seek the Lord;" and to pray for instantaneous illumination by the Divine Sun is assuredly to seek the Lord, however wrongly gone about; for the Divine Sun is no other than the Lord; and the Buddha himself is even called the Lord. Are the prayers of professing Christians always nothing else than seeking the Lord, or asking for divine illumination? And is their own mode of prayer so correct and effectual that they always, in its exercise, *find* Him whom they *seek?*

‡ "Repose," according to Medhurst, the well-known Chinese interpreter, *means* entrancement, with the Buddhists; so that to "enjoy repose" is an expression only used to denote being in a trance. [See *Builder* of 16th August, 1856, page 450.] The Hindus have much the

same purpose have the Christian monks of Mount Athos in view when they meditate upon the Christ within them, with their eyes fixed upon the umbilicus, as the centre of their body. And this reminds me that wherever an ancient oracle existed, that spot was called the *umbilicus*, or *centre*, of the earth, as indeed were the entranced themselves, who were consulted as oracles;* and that the very word Om is believed to have had a somewhat similar meaning, and to have been used even by the Greeks in this sense, and as "the opening," "the mouth," "the voice," &c. The word, indeed, occurs in many languages, and always, it is said, with a meaning in some way connected with the idea of a *circle* or the *centre* of a circle. *Umbilicus*, itself, has been quoted as a word etymologically related to *Om*; and what is very odd, in connexion with the subject of Northumbrian rock symbols, is the fact that Higgins, in his Anacalypsis, traces the name North-umber-land through the *Om*-bricæ, to the East, and to this very word Om, which, also, as he considers, is identical with the Omh of the *Irish* Druids, which means "He who is"—or in fact, the "I am"—the Identitive—the Ever-the-Same,—"The Same" of Plato,—to arouse whom in the Soul by the monotonous or identitive repetition or calling of the name of this "bent bow of the soul," as he is called by the Buddhists, appears to be the sole immediate purpose of all the *Om mani* prayers of the Thibetan Buddhists, and of all the reiterated callings on his name among the Brahminical Hindus.

The eternal repetition of the rock symbols may have had a somewhat similar purpose to the *Om mani*, in Druidical or Celtic devotion. The central point or hollow depression, or central *opening*, was evidently what it was desired to *fix the attention upon*; and the fixation of the devotee's eyes on this point under devotional impression would be analogous to the fixing of the Mount Athos monk's eyes upon the centre of his body, and his mind upon the internal Christ; as well as to the fixing of the Hindu's eyes upon the point of his nose, as Douglas, of Cavers, in his work on "Errors in Religion," says he is taught to do, while he fixes his mind upon the word *Om*; and to the fixing of the Buddhist's eyes and mind upon his *Om mani* or his whirling cylinder;—which cylinder reminds one, by the way, of the sorcerer's wheel,—

> "That magic wheel, which power to Nico gave
> To draw *the lover* o'er the distant wave;
> And, *from her couch*, half willing, half afraid,
> *At dead of night* to lure the trembling *maid*."
> *Anthology*, v. 205.

When it was spun in one direction, the sorcerer's wheel was believed to possess the power of inspiring love for one of the opposite sex; and when retrograded, or spun in the opposite direction, it was believed to free the heart from its own spell, as has been supposed to appear from Horace's prayer to Canidia:—

> "Citumque retro volve,—solve turbinem;"

which has been thus translated into English:

> "Reverse thy magic wheel, and break the spell;"

and thus into French:

> "Et que le cercle magique tourne,
> En un sens contraire."

In beseeching Canidia, however, in his ode to her, to desist from, or to reverse, her incantations, whereby she had *enchanted* or *bewitched* him, Horace doubtless had her enchanting or magical and revolutionizing influence on his mind in view, rather than any incantations by means of a sorcerer's wheel. Turbinem, besides denoting a sorcerer's or magician's wheel, includes such meanings as giddiness, fury, spinning round like a top, whirling like a wheel, and winding like a spiral; also whirlwind and whirlpool. These meanings may be usefully kept in view by the reader while perusing the remainder of this letter.

The concentric circles of the *sorcerer's* hall, and of the Northumbrian rocks, may have had something more in common with the *sorcerer's* wheel, and these with the Buddhist praying-wheel, than may at first sight be supposed. Even the potter's wheel has had something to do with oracles occasionally, if we may believe Apuleius, who had himself the credit, or discredit rather, of being a sorcerer;—and assuredly he was, by his own account, initiated (as Lucius) in the Eleusinian mysteries; and, on the "confines of death," had seen, or been illumined by, the divine and "midnight Sun," and was exhibited to the profane, "arrayed like the Sun," as a divine cataleptic, a living statue, or an entranced oracle, from behind the veil of the goddess Ceres or Isis.* Apuleius was tried as a sorcerer, or for magical practices, *and especially for entrancing a boy to make him an oracle*; and one of the points in his eloquent and ingenious defence was, that the boy had "the divine disease" naturally; and that it was well known that such epileptic (cataleptic?) persons were liable to *fall down* (or *prostrate themselves*) in their fits (of divinity?) from many causes, such as the whirling of a potter's wheel.

Oracles are even now (or were lately) in full force in the Sub-Himalayas. In the "Asiatic Journal of Bengal," vol. xviii. p. 730, is a curious account, by Mr. B. H. Hodgson, of an "incantation," as he calls it, named the bamboo festival of the Bodos, which was then still actually *ordered*, annually, by the Rajah of Sikkim, for the purpose of predicting the prospects of the harvest! In this modern incantation, thirteen priests (a devil's dozen) dance and chant with a monotonous invocation of a few brief syllables and chorus, round another,—a central priest,—called the Deoda, in whom the god or the oracle is to be manifested. Each of the thirteen holds a bamboo pole in his hand. The chant and whirling dance gradually become fast and furious, till, suddenly, all the thirteen poles *are concentrated to the one common centre of the circle*, into a *pavilion* form, above the head of the central Deoda, who immediately goes off in what Mr. Hodgson calls an "affected fit," but which a little more knowledge of what he was speaking of would have, no doubt, induced him to think was probably a real fit—of entrancement, during the continuance of which the oracle,—the God-possessed or God-given man, the Deoda,—in the encircled centre, was doubtless consulted by the surrounding priests. Even to the "pavilion" there is, in all this, something peculiarly and impressively *Druidical*; and the question forcibly suggests itself,—did not the Celtic and Druidical sculptors of the sorcery halls and Northumbrian rocks practise just such incantations or *invocations* of their God Hu or Hee, the Omh, the "I am," the "He *who is*," or the Identitive, in the Soul's centre of concentrative circles?

It may not be out of place here to remark, in reference to the spirals at the mouth of the passage (or "transe," as they would call it in Scotland) which leads into the sorcery hall at New Grange, that I remember being told by the brother of an aide-de-camp of a late Governor-General of India, of the account which a Hindu gave him of his feelings while falling into a state of entrancement. The Hindu said it was as if his head began to swim round and round spirally, nearing and still more nearing a centre, till, at last, he bolted, as it were of a sudden, *through a central hole or opening*, and was lost, in a moment, to consciousness. Now, ludicrous as this,—like the fixing of the Hindu's eyes on the point of his nose, and of the Christian monk's on his umbilicus,—may be thought, I am well assured that it is highly significant of the true meaning of the sorcerer's concentric double spiral, the one, concentrating to the centre, denoting the entrancing process, and the other, radiating from it, the *reversal*, like that of the witch's wheel, or the undoing of the spell,—of the *god-spell*. The sudden fall of the whirling dervish after a rapid rotation, or *circulation*, round his own *centre* of gravity, while at *his* peculiar devotional exercises, doubtless denotes a consummation of the very same kind as that of the entranced Hindu.* Druidical and magical circles had all of them to do, I doubt not, with similar practices; and probably so had the circular symbols of the sorcery halls at Dowth and New Grange, as well as those of the Northumbrian rocks.

JOHN E. DOVE.

---

same idea of "repose," which with them denotes divine absorption. This, too, is the divine "*rest*" and the "ecstacy" of Christian and other mystics.

* The Jews are said to have regarded Jerusalem as the centre of the earth.

* There are numerous and singular allusions to the Divine Sun, his *rising*, and his *Day*, of the *Night*, in the Bible. Thus "The Lord God is a Sun."—"The Lord shall arise upon thee; and his *glory* shall be seen *upon* thee."—"The Day (shall) dawn and the Daystar arise *upon your hearts*."—"In that Day the light shall not be clear nor dark; but it shall be one Day which shall be known to the Lord,—*not day, nor night*: but it shall come to pass that *at the evening time it shall be light*."—"*The night shall be light about me*."—"The Day of the Lord cometh, as a thief, *in the night*."—"A Day with the Lord is ..... as a *watch in the night*."—"They that sleep sleep in the night ..... *but ye* are children of the Light and children of the Day; and no more of the night nor of darkness;" "therefore let us not sleep as do others, but let us watch."—"Now it is high time to awake out of sleep; for now is our *salvation* nearer than we believed."—"*The night is far spent: the Day is at hand*: let us therefore cast off the works of darkness and let us put on the armour of Light."—"Light *in the Lord*,"—the "Divine Sun," who cometh "in the night" as "the Daystar in our hearts."—"To you that fear shall the Sun of righteousness arise ('in you,' or 'upon you,' 'in the night' of nature) with healing in his wings."—"There is no night *there*, and *they* need no candle, neither light of the sun; for the Lord giveth them light."—"Their eye is single (over the 'whole body;' the spiritual or 'pneumatical body,' as Aristotle has it, being 'all sense -all sensory') and their whole body is full of Light, as when the bright shining of a candle giveth thee light." In short, this is the true "Crown of Glory," and Divine "Illumination," both of body and of soul, "in the holy Spirit" of Rest, which is also a Spirit of *watching*, or a Radiative *life*, though a concentrative *death*. Thus Illumination by the *true* eternal *Sun* denotes or implies the advent of a new Day of eternity in the Night of time; and hence the conversion of night itself into this new Day of Rest *to and in all those so illuminated*, or so resting and refreshing themselves, *nightly*, "in the Light" of the "high noon" of this "Midnight Sun." To all such, "night" is "spent" and "Day" has "dawned." The quotations are mostly from memory, but are correct, I believe, in all essential respects, as may be seen by help of a Concordance.

* Some Christian mystics have an idea that the Soul ascends spirally to heaven; and, as the ascent of the Soul into the Spirit is just, as it were, the descent of the Spirit into the Soul, perhaps the spiral idea may have been derived from that of the Lord descending "like a whirlwind," speaking "out of the whirlwind," having "*his* way in the whirlwind," &c. "Marvel not that I said unto thee, *ye must be born again*. The wind [the whirlwind?] bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, and whither it goeth: *so is every one that is born of the Spirit*..... Art thou a master of Israel and knowest not these things?"—St. John iii. 8.

THE ECCLESIOLOGICAL SOCIETY.

TOWN CHURCHES.

The twenty-fifth annual meeting of the members of this society was held on Monday evening last, at the South Kensington Museum. The chair was occupied by the president, Mr. Beresford Hope.

A collection of church-plate mosaics (by Signor Salviati) and of mural paintings was exhibited, and appeared to attract considerable attention.

The chairman commenced the proceedings by observing that the present was the twenty-fifth anniversary of the Society, and might be said to make an epoch in its history. He was glad it was not a tercentenary; for, judging from the experience of the Shakspeare festival to commemorate that event, they had no desire to emulate that ceremonial. The association had, he might say, been successful at all points; and this was a simple fact, of which every county, every archdeaconry, and every large town in England was a standing witness. He would not refer in detail to what had been done for Gothic architecture, which had of late years revolutionized the external appearance of our churches, nor would he refer to that which the report would disclose, but would content himself by calling upon their excellent Hon. Secretary to read the narrative of their proceedings during the last twelve months.

The Rev. Benjamin Webb (Hon. Secretary) then read the report, from which we take the following portion:—

"We proceed to notice the principal new churches of the year. In the first rank we must place Mr. J. L. Pearson's excellent church of St. Peter, Vauxhall, which is memorable as the first example, in the present revival, of a church vaulted throughout. Mr. Street's fine design for St. Mary's, Clifton, and the same architect's church of St. John, Torquay, are very noticeable. We hear with pleasure that Mr. Burges is really beginning the new cathedral of Cork. That of Tuam, by Mr. Deane, is also in progress. Mr. Scott's new chapel for St. John's College, Cambridge, is already above the first tabling. Mr. Buckeridge is building a very remarkable church, with hospital attached, at Holy Trinity, Ascot, Berkshire. Mr. Clarke's original chapel for the House of Charity, Soho, will shortly be opened for worship. The shell of Mr. Bodley's new All Saints', Cambridge, is completed; and he has also in hand St. Wilfrid's, Hayward's Heath, Sussex. Mr. Robson has designed a good church at Rainton, in Durham; and Mr. St. Aubyn one at St. Mark's, New Brompton, Kent. Mr. Slater has designed a series of very inexpensive churches for Belfast, and his chapel at Hurstpierpoint is in course of erection. At Edinburgh he is about to complete the enlargement and enrichment of the church of St. Peter. Mr. Withers has designed a chapel-school for Coatham Mandeville, in the parish of Haughton-le-Skerne, Durham, which deserves special commendation. Mr. Peacock's church of St. Jude, Gray's-inn-lane, has made excellent points. St. Mary's, Aberdeen, the work of a clerical amateur, has been finished.

Out of England we notice the commencement of Mr. Street's design for the memorial church at Constantinople; a church at Egutpoora, Bombay, by Mr. Buckeridge (embodying some suggestions by Mr. Cameron on Tropical architecture); and one by Mr. Wray, for Calcutta.

A design by M. Statz, of Cologne, for an Anglican chapel at Stuttgart, has been noticed at length in the *Ecclesiologist*; as also M. Cuypers's remarkable Roman Catholic church at Amsterdam.

Mr. Withers is about to build a very good English church at Brussels; and Mr. Smith has completed one, with many excellent points, at Naples.

The work of church restoration continues with unabated zeal. Hereford Cathedral, restored by Mr. Scott, has been re-opened. Gloucester Cathedral and St. David's have been entrusted to the same architect, who is also commissioned to take the spire of Salisbury in hand. The spire of Chichester is rising again, under Mr. Scott and Mr. Slater. The works at Ely in the octagon are making progress; and a county appeal has been made in behalf of the continuation of the works at Worcester, under Mr. Perkins. A restoration of the reredos in Westminster Abbey is contemplated, under Mr. Scott; and Signor Salviati's mosaics in the Wolsey Tomb-house in Windsor Chapel approach completion. The well-meant, but most deplorable, restoration of St. Patrick's, Dublin, continues to excite the deep regrets of all ecclesiologists. In St. Paul's, London, the first mosaic of the apse, designed by Baron Triqueti and executed by Dr. Salviati, is about to be fixed. Pershore Abbey church, restored by Mr. Scott, has been finished; and Great St. Mary's, Cambridge, by the same architect, having been re-arranged and re-fitted, now displays the fine proportions of the interior. Other large churches, such as St. Cuthbert's, Darlington, under Mr. Scott, and St. Nicholas, Great Yarmouth, under Mr. Seddon, are in hand. In St. Sepulchre's, Northampton, a new font is to be placed, as a memorial of the late Canon James. Mr. Norton has been called in to suggest a plan for enlarging St. Mary's, Cheltenham; and Mr. Slater has in hand the fine church at Calne, Wiltshire. Newland Church, Monmouthshire, has been restored by Mr. White; and Bosham Church, Sussex, by Mr. Christian. Attention has been loudly called to the necessity for restoring the noble church of St. Nicholas, Newcastle-on-Tyne, to serve (it is hoped) as the cathedral for a Northumbrian see. In London, Mr. St. Aubyn has finished his judicious alterations in the round nave of the Temple Church, and is about to begin the restoration of the interesting church of Cliffe-at-Hooe, Kent; and Mr. Hayter Lewis and Mr. Slater are about to begin the actual works of restoration in St Bartholomew's, Smithfield. Elaborate decorative works are in progress in the ancient crypt of St. Stephen's Chapel, which we hope will be used as a chapel for the Houses of Parliament. At Oxford, Mr. Burges has in hand the interesting task of transforming and decorating the interior of the chapel of Worcester College. All Saints', Brixworth, Northamptonshire, is about to be undertaken by Mr. Slater, with all the caution that is necessary in touching so curious and venerable a building. The interesting church of Cobham, Kent, has been restored by Mr. Scott: that of Minster, in Thanet, in the same county, has fallen into non-professional hands, but has not suffered so much as might have been expected. The need of some reparation in the round chapel at Ludlow has been urged in the pages of the *Ecclesiologist*.

"Of works not strictly ecclesiastical may be mentioned the restoration of the curious Decanal house at Gloucester, and the contemplated improvements in the Guildhall, London. Here it is intended to reproduce the ancient open timber roof, and to restore the original windows, which happily remain. It is understood that the Corporation of London are contemplating further works of great magnitude, including a complete range of buildings, on a general scheme, for the law courts, the City library, and other municipal offices. It is greatly to be hoped that the result may be such a town-hall as may be worthy to be compared with those of the great commercial cities of the Low Countries. The remains at Mayfield, Sussex, have been purchased by a Roman Catholic community, and the ancient hall is to be converted into a chapel.

"Abroad, the opening of the completed and roofed nave of Cologne Cathedral must be chronicled. The restoration of French cathedrals seems to be continued with the same recklessness that has excited alarm among English antiquaries. At home also we have still to complain of the careless scraping of ancient sculpture in works of so-called restoration. It may be doubted, also, whether monumental stones, which are seldom without value as documents, are not too often needlessly sacrificed in modern alterations. At Amsterdam, M. Cuypers has won the competition for the new picture gallery. Here the competition was limited to that picturesque form of the Renaissance, which is natural to that city. He has subsequently succeeded in another competition for the National Monument of 1814, in the same city, when his Pointed design was chosen in preference to one in the Classical style.

"Turning now to the subsidiary arts, we are not able to say that the progress of religious sculpture is very promising. The committee look with some apprehension to the sculpture which is promised for the Albert Memorial at Kensington. Mr. Philip has finished a high-tomb for Lady Canning; and Mr. Redfern has in hand a good recumbent effigy of a lady for a church in Hampshire. Mr. Earp has also executed some good architectural sculpture.

"Polychromatic decoration is in a more hopeful state. Mr. Herbert's final mural painting in the House of Lords must be noticed. Mr. Gambier Parry is carrying on, with vigour and increasing ability, the roof paintings in the nave of Ely Cathedral, begun by Mr. Le Strange. A promising experiment of an effective but inexpensive method of wall-painting is being tried, by Messrs. Clayton & Bell, in Mr. Pearson's church of St. Peter, Vauxhall, which has been already noticed. At St. Alban's, Rochdale, Mr. Clarke is colouring the whole chancel; and a skilled amateur is desirous to paint the church of Bosham, in emulation of Mr. Gambier Parry's admirable work in his own church at Highnam. At Lyndhurst church Hants, a reredos has been painted by Mr. Leighton."

The Archdeacon of Bristol briefly moved the adoption of the report, which, he observed, bore most gratifying testimony to what had been done and what was doing all over the country for the development of correct principles of taste in the erection of new and the restoration of old churches. He knew of no association which appeared to do so much work with so little show and so little talk.

Mr. St. Aubyn called attention to the contemplated destruction of St. Mary's Church, Cheltenham, which, he said, was about to be demolished, with the exception of the tower. He had ventured to remonstrate with Mr. Cooke, the architect, on the subject, but to no purpose; and perhaps it might be well for the Association to write a few lines before it was too late.

The Chairman.—Is the new church to be a tolerably decent one?

Mr. St. Aubyn said that, from an examination of the plans, it appeared to him to be an immense church, which would quite bury the old tower that was to be left standing.

Mr. Gambier Parry said he lived in the neighbourhood, and that St. Mary's Church, Cheltenham, was the only decent bit of architecture in the whole neighbourhood. He quite agreed with Mr. St. Aubyn as to the inadvisability of sacrificing the old church: it contained an admirable rose window, which was very rarely found in a parish church. It would, he thought, be abominable to destroy it.

The Chairman thought the subject was one which the Association would do well to take up, and he suggested that they should communicate with the Bishop of Gloucester and Bristol, and transmit a formal remonstrance against the proposed destruction. They might all bring any local influence they might possess to bear on the same subject. As he saw the Rev. Dr. Jebb present, he would be glad to know whether he had anything to say on the subject of the "restoration" of St. Patrick's Cathedral, Dublin.

Dr. Jebb said he was glad to be able to report that the proposed arrangement with reference to the choir would not be carried out, as it would have destroyed the character of the whole building. He owned that, from all he had heard in reference to the restoration, he had approached the structure with fear and trembling. Subsequent examination showed that his apprehensions were not groundless. He would not enter into all the barbarities of the details, but he might state that the general effect was not so very bad as he had expected to find it. Indeed, it was even fine. The northern transept had been restored, which, thirty years ago, had been rebuilt in a most preposterous style, and had been used as a parish church. This had been pulled down, and a Norman transept built. He was sorry, however, to find that the magnificent old organ, which had some of the finest "stops" of any instrument in the world, was to be removed. He understood that the pipes had been already melted down, and a new organ set up in a side aisle. He had been unable to ascertain whether there was to be an altar-screen; as, in answer to inquiries on the subject, he was informed that "Mr. Guinness had not yet made up his mind on the subject." The details of the "restoration" showed deplorable ignorance of art; and however much they might respect the munificence of the gentleman who had undertaken the work, that sentiment ought not, in his opinion, to mitigate their feelings of regret and censure for the manner in which it was being carried out. With respect to Christ Church, the other metropolitan cathedral of Dublin, the "restoration" was so wretched and preposterous, that nothing further remained to spoil, and total demolition was all that was left undone. A few of the ancient details yet remained, and it might be desirable to secure drawings of them, and to bring the influence of the Society to bear to prevent the complete desecration of a most interesting metropolitan church. He hoped there was no truth in the whisper of a whisper (for he could not call it anything else) which had reached him, of the intention to pull the building down; but he thought it his duty to mention what had reached his ear on the subject.

The Chairman said that he had some recollection of Christ Church and of St. Patrick's Cathedral, and that some of their details were so beautiful and interesting that he thought the Society would do well to move at once in the matter.

Mr. Burges brought under notice the decayed and disreputable condition of the south façade of Westminster Abbey, built by Sir Christopher Wren. The sculptured figures were, he said, rotting away, and the whole of the apostles were already gone. With regard to the display of church plate in the room, he was bound to say, that he did not think it was at all up to the age, as the forms and designs were those of twenty years ago, and showed no signs of progress in this department of art.

Mr. White observed, that he had seen the drawings for the proposed restoration of St. Mary's Church, Cheltenham, and that the building which it was intended to construct would, in his opinion, be far too large to be filled by any single voice.

The report was then agreed to.

Town Churches.

The Chairman, referring to the plan and construction of town churches in a practical and artistic sense, pointed out the various styles and features which it might be desirable to consider, and advocated the necessity of building town churches, with a view not only to ritual grandeur and congregational convenience, but also to the surrounding buildings. As an illustration of the representative of a fine Mediæval groined church, he referred to St. Peter's, on the site of Vauxhall Gardens. This was a brick groined church, with an apse, and reflected great credit upon the architect—Mr. Pearson. On the much-vexed question of galleries in churches, he must say that his opinion remained unchanged, as he believed that something similar to that found in the Rhenish churches, or in the new Roman Catholic church now building at Amsterdam, might be introduced with advantage. Here, there were aisles, nave, and triforium, for congregational use, and over the latter a clerestory, and then a brick vault, all of which might be used as galleries.

Mr. Burges thought that the Chairman, who had studied the subject of church architecture so deeply and so well, might do good service if he could be persuaded to write another book in reference to the topics to which he had called attention that evening. With regard to town churches, he was of opinion that we had not in the whole metropolis a single church worthy of the name. We wanted thick walls, domes, mosaic inside, and marble outside—something, in fact, which looked like a church, and might be used by thousands as a church. In his opinion, the idea of putting up little village churches in London was simply absurd. London was now in course of reconstruction. We were building houses five and six stories high, and what we wanted to keep pace with our domestic architecture was, great masses of churches.

Mr. Gambier Parry said, he quite agreed with what the Chairman had said on the subject of galleries in churches. It might be heresy to advocate them; still, he thought they might be judiciously introduced in town churches. He had always supported Gothic architecture as the architecture of common sense. No other style was so elastic; and although it might be heresy to advocate the introduction of galleries in Gothic churches, still he felt bound to say that he saw no other way of accommodating large congregations than by various stories or galleries.

The Dean of Bristol confessed that, although he had heard a good deal in favour of galleries, he was of opinion that, if possible, the congregation should all be on the floor.

Mr. Clarke said, his own feeling was that we had arrived at a period when galleries had become a necessity. If we could afford to decorate our churches with mosaic, majolica, and marble, as suggested by Mr. Burges, we might be able to build all our churches on such a scale as to accommodate the whole congregation on the floor.

Mr. White thought that a good town church ought to be so designed as to be more lofty than the adjoining houses. He was in favour of constructing churches so as to obtain as much light as possible from above, and to make large chancels and chancel aisles.

Mr. Hills said that a round church was an unpracticable form, unless admission were free, and unless seats could be dispensed with altogether. He confessed that he was shocked to hear any one in that room advocating galleries under any circumstances. In Roman Catholic cathedrals, galleries were used in order that the congregation might obtain a glimpse of honoured relics or sacred processions; but as these were not exhibited in Anglican churches, there was no necessity for galleries.

Mr. Heels, as an amateur, advocated small churches and frequent services.

The Chairman said, he quite agreed with the last speaker as to the advisability of multiplying services.

A member suggested that, in building new churches and restoring old ones, it would be well to keep in mind the necessity of providing for choral services.

After some further discussion, the proceedings were brought to a termination by a vote of thanks to Mr. Hope for presiding.

MOSAIC ART.

MOSAIC art, in its ancient and true form, has at length, after a lapse of eight centuries, again taken root upon English soil. Mediæval mosaic, and also the art as practised in the empire of the East, after its transfer to Constantinople, must be considered degenerate, and by no means equal to the legitimate and beautiful *opus vermiculatum*, practised during the empire of the twelve Cæsars. The art was at that time divided into three varieties,—the *opus majus*, *opus medium*, and *opus minor*. Thus we find all the varieties of the mosaic art were defined in Latin terms. The baths of Caracalla displayed specimens of *opus majus*, the work being large and coarse. Specimens of the *medium*, much finer, are to be witnessed in the ruins of Pompeii. A splendid specimen existed there of this style, in a large painting, supposed to represent the battles of Alexander and Darius. But the *opus minor* gave, in the style of *opus vermiculatum*, the finest, most beautiful, and elaborate of all the ancient Roman mosaics. It consisted of delicate paintings, in very minute pieces of marble, worked in with other fictile materials, most of the strips, or tesseræ being only the tenth of an inch across. As an instance of the luxury of this period of the empire it is recorded, that Julius Cæsar carried with him in his wars, pieces of these precious mosaics, for the adornment of his tent.

Some who take a circumscribed view of mosaic give its origin and discovery to the monks, and its cultivation and perfection to monastic skill, and a monastic life; in short, that mosaic art was exclusively practised in monasteries, and by the labour of ascetics. This is incorrect. It is true, when the arts, learning, and science were extinguished by the barbarians, the monasteries proved the only secure asylum for them until their revival. But this art flourished perhaps a thousand years before the Christian era, and was very probably the earliest and most enduring expression of pictorial art. It is not well determined what people, or nation justly claim the merit of its invention or discovery. Unless it be conceded that in the ancient periods of human civilization, or semi-civilization, natural science was cultivated, and natural philosophy had its schools and professors, it is difficult to comprehend how mosaic art was discovered, or became established. We have every reason to believe that this art was practised by the early Egyptians, transmitted from them by conquest to the Persians, and again by the same means to the Greeks, who gave to the art the generic name of *Lithostroton*. This gives an antiquity sufficiently remote; but a period when even language was in its infancy, and written language not discovered, would not seem capable to foster, and cultivate natural science. We are led to these observations since a knowledge of chemistry is almost indispensable to the production of mosaic painting. But even alchemy, and the secrets of the transmutation of metals, if they were resorted to at this period, are not noticed as having existed in the records of history among the ancient Egyptians. Upon the supposition of the practice of these arts, under the designation of natural science, at this distant epoch of the history of mankind, we are not nearer to comprehend how they succeeded in the precise combinations required for the formation of the mosaic enamels, their delicate and various tints, and shades of colour—combinations and results, both as regards material and colour, that have resisted every external influence, source of decay, or destruction, even down to our own time: combinations also implying some knowledge of physical agencies, and re-agencies only obtainable through the achievements of natural science, or a knowledge of chemical affinities. But it is still more surprising that, with the possession of knowledge of minerals, metals, and their subjection to changes by agency of furnace heat, implied in the production of the mosaic enamels, and their application to transcendental art, they should not have also stumbled upon the discoveries afterwards made by groping perseverance and untiring researches, of antimony and mercury, among many other skilful manipulations, highly important in the future progress and researches of science. Until the present day, for ages, Italy has enjoyed the unrivalled, and envied monopoly of encouraging mosaic art, as it may be said to have done of all the sciences and arts. The Romans, after having conquered the Greeks, subjected them to the usual condition of a Roman province. Hence, numerous migrations of Grecian artists took place to Rome, and at that time introduced the mosaic (the *Lithostroton*). They gave to the numerous varieties they introduced and practised all over the provinces conquered by them, Latin denominations, namely, *opus tesselatum* and *opus sectile* for pavements, and *opus vermiculatum* for mural decoration. The Romans designated them the "glassy walls," *cum auro superinducto*. They were extensively used, both in public and private. The gold floors are still to be seen as pavements, found in the richest houses in Pompeii. These were executed at least one hundred years before Christ. A great influx of Greek artists no doubt occurred, after Constantinople was besieged, and taken by the Latins in 1203; and they and their disciples executed in the eastern empire many of the Byzantine, and Mediæval mosaics. In the more recent periods in which mosaic flourished, the popes and the Church took it under especial regard and encouragement, and it was greatly fostered by the early Christian emperors, in the churches they at that period erected. The monasteries at length became the workshops, and monks the artists of mosaic. It is even probable that Roger Bacon, one of the greatest men and philosophers of this, or any other country (as was afterwards another of his lineage and name), among his multifarious accomplishments, and achievements in science, practised, as he did, the mysteries of alchemy, the mosaic art, he being also the discoverer of gunpowder, and that the Abbey of Westminster, where he so long dwelt, and may be truly said to have been imprisoned, does to this day contain some of the handicraft labours in mosaic of Friar Bacon. These labours may have tended to beguile the miserable persecution this great man suffered in a dark period from the hands of his superstitious countrymen. This is strongly confirmed, since at the date of Roger Bacon's incarceration, in his friar's cell at Westminster, the mosaic was finished, that to this day gives us a beautiful specimen of the art executed A.D. 1270 upon the shrine of Edward the Confessor, in the reign of Henry III. England has always been slow in adopting high art—always tardy in the initiation of imitative skill; but, with the usual tenacity of its race, when once inspired with an idea worthy of realization, success invariably awaits, and is the result of its efforts.

The existence of mosaic art is first recorded in the Book of Esther: to use the language of holy writ, "Ahasuerus King of Persia and Media, reigned over a dominion extending from India to Ethiopia. In the third year of his reign, he gave a great feast to all the princes, and nobles of his provinces, in his palace of Shushan, where he sat upon the throne of his kingdom. He there displayed the riches of his glorious kingdom, for a hundred and fourscore days. He also made a feast in the court of the garden of the king's palace." We first read in the Book of Esther, in the description of the sumptuous magnificence of the palace, of its riches, and luxurious embellishments, a clear description, and the earliest on record, of mosaic art, in the following words: "Where were white, green, and violet hangings fastened with cords of purple to silver rings, and pillars of marble. The beds were of gold and silver, upon a pavement of red, and blue, and white, and black marble." This confirms that at this remote date mosaic art was practised by the use of natural crystallized minerals, whenever, at almost any cost, they could be obtained. Thus, no doubt, ruby, porphyry, pavonazetta, sapphire, serpentine, agate, jasper, and jade, were the gems resorted to for this purpose. These could be only found or supplied at great cost, and insufficient in quantity to supply the demand, which the luxurious arts of that age created, and required. But Egypt flourished, and was in its highest state of civilization long before this period. The condition of the civilization of Egypt was peculiar; it deteriorated from the date of its commencement, and flourished most as an empire in the most distant period of its existence, or in its most juvenile period of civilization, contrary to all examples of more modern times.

Natural minerals, represented by gems, and precious stones, were resorted to, until the less costly expedient of artificial minerals, in the form of furnace-fused enamels, coloured with metallic oxides was discovered. When this discovery was made, we are left in entire ignorance: its date is not known.

The fictile imitations of mosaic enamels, in pot-clay, of Messrs. Minton, and also of Messrs. Maw (the latter executed in designs given to them by Mr. Digby Wyatt, who has contributed much to elucidate the mosaic art), afford earnest of what may be expected in achievement, from those who have embarked in genuine mosaic, and whose ingenuity has at length, discovered the elements, combinations of colours, and chemical minerals required to accomplish in the execution, the perpetuation of designs in pictorial art to all ages, in the most graceful, brilliant, and enduring forms. However charming, and attractive are the fictile *tableaux* of the Messrs. Minton, and Messrs. Maw, enamelled, and glazed with brilliant tints, in imitation of Mediæval glass tesselation, they will not suffer comparison, and only serve as a foil, even when at a distance from the genuine mosaic, to display the unapproachable beauty, and excellence of the latter. We are, moreover, informed that cost will no longer continue to be a barrier to the use of mosaic work. The architect may now extend the limit of his ideal creations, and give licence to architectural ornamentation, never before attainable. He will no longer be deterred by the impediment of cost, or cramped in his creative designs, by the monopolies, the establishments of Rome, Florence, Venice, and St. Petersburg have hitherto enjoyed, of the most beautiful element conducive to the excellence of architectural science, in the manufacture of the mosaic enamels. The architect may, for a while, be chary in the use of this delicate and brilliant decorative element. But, when the fact, that pure and brilliant as are the tints and tone of colour of mosaic paintings, they are also as enduring, as the granite block forming the outline, and elevations of buildings, and that the mosaic tesseræ will remain unaltered for ages, by time or decay, even when the coarse granite shows symptoms of mouldering away, he will not long pause to adopt this new arm of his art. Dominico Ghirlandajo, well expressed this truth when he said that mosaic was the only painting for eternity. Vasari also made the same remark.

But a few months since, Mr. Jesse Rust was as innocent of the knowledge of mosaic art, or of mosaic enamels, as he probably is of Hebrew.

"

Being challenged to produce the artificial mosaic minerals, and mosaic gold, and silver, by a party little expecting any other result than failure, his attempt proved successful. At his glass-works in Lambeth, he is now actively manufacturing the artistic minerals, and also gold and silver enamels, used in mosaic art. It is also not less creditable to his perseverance, ingenuity, and industry, that with little preparation or training, he has already submitted for public criticism, very fair specimens of mosaic, formed from tesserœ of his own manufactured enamels.

These may be seen at the Architectural Exhibition, Conduit-street, now open to the public. Among them, we may mention a centre cross of gold ground for altar or reredos, in stick and cane mosaic; mosaic specimens of gold and silver enamels; numerous chromatic shades, of cane or stick mosaic; and gold, silver, and coloured bosses, for external, and internal mural decoration; pressed tesserœ, for pavement and mural work; also pressed and slab enamels, and some very good specimens of geometrical mosaic. At the South Kensington Museum, may also be seen specimens of Mr. Rust's execution: namely, a mosaic design; a chromatic scale; a mosaic wall-tile; a panel of geometrical mosaic; an altar-piece (mosaic cross); and specimens of gold, silver, and enamel bosses, for architectural decoration. However unpretending, and humble these efforts may be, they give promise of future improvement and advance, claiming encouragement, as manifestations of native enterprise and skill. They are unambitious, but sufficiently deserving of the fostering solicitude, and patronage of the promotors of decorative art. Other competitors, now that the facility thus afforded by Mr. Rust of obtaining the enamels, and also by the manufacture of Messrs. Powell, of Whitefriars, to supply the material for prosecuting the art, are exhibiting; Mr. Fisher, of Southampton-street, has sent to the South Kensington Museum, a head and figure of St. Peter, thus obtained of British mosaic enamels. B.

THE SOCIETY FOR IMPROVING THE CONDITION OF THE LABOURING CLASSES.

THE twentieth annual meeting of this society has been held at Willis's Rooms, St. James's; the Earl of Shaftesbury in the chair. The report gave the result of the workings of the several model buildings, lodging-houses, &c., connected with the society during the year ending 31st December, 1863, as in every particular satisfactory and encouraging. The mortality in the entire of the society's houses during the year had been twenty-five out of an average population of 1,509. Seventeen deaths were of children under ten years of age. The average rate of mortality of the society's houses had been therefore only 16·339 per thousand. The net return from all the society's houses during the year exceeds that of the previous year by 196*l.* 0s. 1½d. The number of washings at the public washhouse at Portpool-lane had been 21,367. The receipts from this source had been 457*l.* 10s. 1d., and deducting therefrom 448*l.* 6s. 10½d. expenses, including repairs, there remained a small balance of 3*l.* 3s. 2½d. in favour of the establishment. The real property, &c., of the society (valued at cost) is 44,545*l.* 12s. 7d., and the general liabilities 22,279*l.* 9s. 11d., leaving assets (valued at cost) to the amount of 22,266*l.* 2s. 8d. The Earl of Shaftesbury expressed his unabated interest in the society after an attachment to it of twenty years. There was one great difficulty, however, he said, that was not as yet touched on, and that was the providing for and protecting those unfortunates who could not pay even the small rent required at the model lodgings attached to the society. He believed that a vast amount of the drunkenness and immorality that prevailed was attributable to the filthy condition in which those poor destitutes were obliged to live; and when some remedy would be applied to this melancholy state of things, which he looked upon as quite possible, it would go further, he thought, to promote universal health, prosperity, and happiness, than anything else that could be devised. This was a crying necessity of the present day, and he hoped that those who had it in their power would come forward and give the necessary assistance. This society had proved that the poorer working classes were open to improvement. He knew himself they were, and he never knew the working classes of this country to be more ready and desirous to be improved than at present.

THE GUILDHALL, LONDON.

COURT OF COMMON COUNCIL.

AT the meeting on the 23rd ult. Mr. R. N. Philipps moved a resolution to the effect that as 24,000*l.* had been voted for the restoration of the roof of Guildhall, an outline model of the purposed form of which has been submitted to the Court, the Improvement Committee be empowered to obtain forthwith the advice of some of the most eminent architects, to be named by the Court, in conjunction with the City Architect, in settling the details of the restoration in accordance with the style of the original architecture. He urged that the work was a national one, and that it ought to be carried out in a manner so as not in any of its details to offend archæological taste. He contended that the proposed introduction of sixteen dormers or lights, each 13 feet high, into the roof, was a solecism in architecture, having regard to the time the hall was built and to the roofs then in vogue, as was also the proposed louvre, which was to be 65 feet high from the apex of the roof, and 18 feet wide at its base. According to the opinion of Mr. Raphael Brandon, none originally existed in the English halls. The imposing effect of a grand open oak roof would be marred by such recesses in it, whilst it is contrary to the best information which we can obtain that such ever originally existed. There was another matter, however, to which he would call attention, viz., the proposal of a large louvre rising from the centre of the roof, 65 feet high and 16 feet wide, the lower part constructed of wood, principally covered with tiles, and the upper half of iron. What the effect during a high wind might be he could not pretend to say; but as it depended merely on the roof to which it was fixed, and did not rest on a structure from the ground, its stability might be questionable. Again, the ridge of the roof was crested with ornamented ironwork, 2 feet high—a species of ornament found only in foreign countries, but never till recently in England. Such ironwork and such arrangements cannot be said to be consistent with the original architecture of the hall itself.

Mr. Philipps concluded his remarks by quoting from a letter of Mr. Gilbert Scott, in which he says, in reference to the "alterations sustained by the noble civic hall, that nothing can be more important than to ascertain, by the most careful study, both of its external and internal evidences, what was the original form and design of the parts it is proposed to restore, and to adhere rigidly and loyally to the results of such investigation; and that nothing should lead to a consent that the noble historical monument should be restored in any other way than in exact conformity with its ancient design."

Mr. Kelday, the chairman of the Improvement Committee, explained that although the outline of the roof had been agreed upon by them, the details had not been finally arranged by the committee, but that when they were they would be submitted to the Court for approval. Some difficulty had been experienced in ascertaining the exact form of the original roof, from the want of reliable historical information upon the subject. Its exact form was not known after the fire of London which destroyed it; but within the last few months, in removing the roof, which was constructed in 1669, three years after the fire, indications were discovered proving that the roof now proposed was as nearly as possible like the original one in form. They had also found that two louvres and two dormers were introduced into the original roof fifty years after its erection, so that the use of such adjuncts now could not be called an innovation. Besides, as the new roof, which was to be open in the interior, would be of great height, and filled in with tracery, light would be indispensably necessary to render its internal ornamentation appreciable.

Mr. Horace Jones, the City Architect, stated, in reply to a question put by Deputy Elliott, that a great many of the alterations referred to by Mr. Philipps were not finally agreed upon, and that he was proceeding with the utmost caution.

The motion of Mr. Philipps was eventually put to the Court, and negatived by a large majority.

A report was presented from the police committee by Mr. Alderman Finnis, with plans and estimates for the erection of a police-station, with an infirmary adjoining, in Bishopsgate-street, in lieu of the existing station in that division, at an estimated cost of 13,750*l.* The report was agreed to, and referred back to the committee to be carried into effect. Mr. Kelday, the chairman of the Guildhall Improvement Committee, presented a report from them, recommending the purchase of leases and of freehold property in Basinghall-street for 30,000*l.*, with a view to contemplated improvements in the neighbourhood of Guildhall for the convenience of the Corporation. The report was adopted.

COMPENSATION CASES.

NOTTINGHAM.

THE award of the umpire has just been published, in relation to a claim for compensation, under the Lands Clauses Consolidation Act, by Mr. Thomas Fox, against the corporation of Nottingham, acting as the Local Board of Health, for the compulsory taking of certain freehold property, required for the improvement of Lister Gate. Mr. John S. Norris, of Nottingham, civil engineer, sat as arbitrator for the claimant; and Mr. C. E. Cawley, of Manchester, civil engineer, as arbitrator for the Local Board; Mr. Jeremiah Mathews, of Birmingham, acting as umpire. Mr. Fox's witnesses were Mr. F. Williamson, architect, who estimated his claim at 9,540*l.*, and Mr. John Jackson, architect, whose estimate was 9,569*l.* For the corporation, Mr. M. O. Tarbotton, their surveyor, estimated the value of the property at 6,186*l.* 6s. 6d., and Mr. T. C. Hine, architect, at 6,438*l.* 19s. 11d.

The amount awarded by the umpire is 7,500*l.*, the corporation, by agreement, paying the costs on both sides.

SOME PECULIARITIES IN ANCIENT AND MEDIÆVAL IRISH ECCLESIASTICAL ARCHITECTURE.

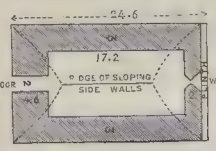
ON this subject Mr. George Victor du Noyer contributes to the proceedings of the Kilkenny Archæological Society an interesting paper fully illustrated. By the courtesy of the Rev. James Graves, we are enabled to place the following parts of it before our readers:—

When Christianity was promulgated in Ireland, in the fifth century, its immediate professors erected, here and there over the country, a very remarkable class of buildings called Oratories; and of these many yet remain in the remote western parts of the county of Kerry, and in some of the islands off the west coast.

These structures are small, and almost invariably rectangular in plan, though one of them, on Church Island, in Lough Currane, at Waterville, in the county of Kerry, is rectangular within, but of a broad oval shape without. They are built of dry masonry, the stones being carefully fitted together, and sometimes bearing indications of having been dressed. The walls, which are usually without foundations, are very thick, and those forming the sides of the building converge rapidly from the ground, each stone overlapping the one beneath it, till the edifice was closed at the apex by a row of single blocks. In one instance the gable walls converge almost as much as the sides, thus giving to the structure a singularly quaint appearance. The door-ways, which are invariably flat-headed, with converging sides, are placed in the gable facing westward, the lintels and sills being formed of very large blocks. The gables facing eastwards are pierced by a small window or narrow loop, which, in one instance, is semi-circular-headed.

The learned Dr. Petrie, in his "Inquiry into the Origin and Uses of the Round Towers of Ireland," has made the archæological world acquainted with two varieties of this primitive church, in his description and illustrations of the Oratory at Gallerus, near the southern shore of Smerwick Harbour, in the county of Kerry; and of that on Church Island, in Lough Currane, which latter building he has identified as the house (or Church) of St. Finan Cam, who lived in the sixth century.*

Dr. Petrie, in describing the Oratory at Gallerus, says that:—



"It measures externally 23 feet long, by 10 feet broad, and is 16 feet high on the outside of the apex of the pyramid. The doorway, which is placed, as is usual in all our ancient churches, in its west end wall, is 5 feet 7 inches high, 2 feet 4 inches wide at the base, and 1 foot 9 inches at the top; and the walls are 4 feet in thickness at

* See Petrie's "Round Towers," p. 130. For an illustration of the flat-headed doorway of Gallerus, see also the work now quoted, p. 160.

the base. It is lighted by a single [semicircular-headed] window in its east side; and each of the gables was terminated by small stone crosses, only the sockets of which now remain. . . . I am strongly inclined to believe that they [the Oratories] may be even more ancient than the period assigned for the conversion of the Irish generally by their great Apostle Patrick."

At page 316 of the same work, allusion is made to another Oratory close to the old church of Kilmalkedar, and at the distance of about one mile north of that already mentioned at Gallerus; and, as this building is remarkably singular, and very probably of greater age than the former, I wish to direct special attention to it.

The accompanying engraving (fig. 1) gives a view of this unique building, as seen from the S.W., and is taken from the summit of the original and nearly circular termon wall surrounding it. Subjoined is a plan of this building:—

It will be seen that the gables converge almost as abruptly as the side walls, the junction of both being suggested by the dotted lines, and in this respect it differs from the Oratory at Gallerus.

The masonry is formed of large splintery flakes of the grey grit of the district, the interstices between the stones being filled with small fragments, the whole most carefully put together, and forming a very solid wall: a narrow plinth passes along the base of the east gable, but does not extend to the side walls. The window in the east gable resembles a narrow flat-headed loop, and is splayed both within and without.

The annexed woodcut (fig. 3) represents the interior of the east gable of this Oratory. Dr. Petrie, at page 182, gives an illustration of the exterior of the window from the east gable of Gallerus Oratory, the head of which is semicircular, and formed out of two stones: the difference between the two opes will be at once apparent.

The internal curve of the side walls of Gallerus Oratory resembles an ordinary pointed arch; while that of the building near Kilmalkedar is of a decided ogee form.

The most singular feature of both these oratories, and that which originally suggested to me the compilation of this paper, is the occurrence of thick projecting flagstones over the interior of each doorway, pierced vertically by large holes, from which a wooden door could have been suspended. The accompanying cut shows the interior of the west doorway of Kilmalkedar Oratory:—

It is obvious that, by inserting strong wooden loops into these vertical perforations, a wooden door could readily have been suspended, after the manner illustrated in fig. 5, such a door being, of course, most securely fastened from within. In the interior and over the doorway of Gallerus Oratory, there are two large projecting perforated flags inserted above the lintel, which is flush with the surface of the wall, and these answered the purpose of the projecting perforated lintel just described.

In all the ruined churches of the eighth to the twelfth century, which I have had an opportunity of examining over the southern portion of Ireland, there is unmistakeable evidence to show that the doors were fastened from within: for example, the doorway of the old church of Agha, near Bagnalstown, in the county of Carlow, a work of the eighth or ninth century; and the richly decorated doorway of the old church of Killeshin, near Carlow, which is doubtless of the tenth or eleventh century.

In the twelfth and succeeding centuries, many of our stone-roofed and decorated churches were constructed with a view to their being constantly inhabited. Cormac's chapel, at Cashel, for instance, has a fire-place in the croft, from which flues for receiving the heated air from the fire are conveyed all round the side walls, on a level with the floor, the apartment being lighted by windows in the south side wall, just below the spring of the roof; and the date of this building has been determined by Dr. Petrie, in the work already quoted, at the year 1127. It was consecrated A.D. 1134. (See "Round Towers," p. 283, &c.)

The ruined church at Donaghmore, between Clonmel and Fethard, in the county of Tipperary, which the late Dr. O'Donovan assured me was a building of the twelfth century, was also constructed to answer the purpose of a dwelling-house, the habitable portion being over the stone-roofed chancel, to which access was by a ladder from the body of the church through a doorway directly over the choir arch.

From the foregoing observations it would appear that the primitive, and doubtless venerated custom, which permitted the ecclesiastics to reside within their churches, became, after the lapse of centuries, so essentially a duty, that eventually the church architects of the thirteenth and fourteenth centuries almost invariably made distinct provisions for its exercise, with as much regard to the personal comfort of the ecclesiastics as would be consistent with the preservation of the sacred character of the edifice, and its insurance from any accidental desecration.

In illustration of this curious fact, I shall select a few well-marked examples out of many which I could bring forward.

The ruined chapel of St. Catherine, which was erected within the precincts of an ancient earthen embankment, which cuts off the extremity of a small promontory on the shore of Nook Bay, to the north of Ballyhack, in the county of Wexford, is a striking example of the peculiar kind of church architecture to which I allude. The style of this building is Late Decorated, and we may therefore suppose its date to be the middle of the fourteenth century. * * *

What gives this little church such peculiar interest is the fact that a small portion of its west end has been designedly constructed so as to answer all the purposes of a dwelling-house, and which was evidently separated from the sacred portion of the building by a wooden partition, or possibly a thin wall, and was divided by a wooden floor into a basement and upper story, as will be clearly understood by the view on the next page (fig. 6). We have here presented to us some very novel features in church architecture. In the left-hand corner, at the base of the gable wall, an arched recess has been constructed, to receive a bed or shallow cupboard, most probably the former; and near it, in the south side wall, is a small loop for lighting this lower apartment. At the opposite corner of the gable there is a narrow flat-headed doorway, leading to a flight of steps constructed in the thickness of the gable wall, which conducts to the doorway raised above the ground, and near the centre of the gable, which allowed access to the second floor. The stairs are prolonged to the parapet of the south side wall, access to which is by a door in the wall of the gable. Above the lower doorway, in the west gable, there is a fireplace, intended to heat the upper floor, which was lighted by the small window close to the doorway in the south wall, and to which allusion has been already made. The stairs were lighted by three small square apertures and a loop in the outer shell of the gable.

Annexed is given a plan of this church (fig. 7), which will clearly explain the architectural peculiarities just described.

A. Main doorway in north wall. B. Small doorway in south wall. C. Recess in west gable. D. Doorway to stairs in thickness of west gable, with fire-place above, indicated by the semi-circular line. E. Stairs to doorway of upper floor, and to the parapet of the south wall. F. Doorway to parapet. G. Small niche for lantern. H. H. Peep holes, commanding land approach to the church. I. Aumbrey. K. East window.

It is probable that the doorway in the south wall was the private entrance to the non-sacred portion of the building, of which the annexed illustration (fig. 8) supplies a probable restoration.

The next example to which I shall direct attention is that of the old church of Castle Gregory, in the county of Kerry, which from its architectural features, appears to have been constructed at the close of the thirteenth, or the beginning of the fourteenth century, and it presents some marked peculiarities which bear strongly on the point I am discussing. It was originally a simple rectangular building, having the walls widely parapeted, and well drained by long gurgoyles. Near the centre of the south side wall, at its external face, there is a large chimney-like projection rising from the ground, and terminating at the parapet, where its use as a *necessarium* is very evident; and on the opposite wall is a similar hollow projection, the use of which is not apparent, unless it was constructed as a mask to conceal the object of the other.

At some time subsequent to the original construction of this church it appears that the accommodation as a dwelling afforded by its western end was not sufficient for the purpose intended. A small massive square tower was therefore erected at the south-east angle of the church, access to which was from the parapet of the south wall by a narrow doorway leading to the first floor of the tower, which was on a level with it; the basement being dark, and probably used as a store-room. From this apartment circular stairs, constructed in the thickness of the wall, led to the roof of the tower.

The east window of this church is a single light of the lancet form, tricusped at top, and completely surrounded by a massive plain bead moulding.

The fourth example which I have to offer is a remarkable one, and quite unique in Ireland, if not in Britain.* I allude to a fortified church, or rather castle-church, forming one of the groups of ecclesiastical ruins at Clonmines, on the shore of Bannow Bay, in the county of Wexford. This singular building stands on a rise of ground adjoining the monastery, but detached from it, and when viewed from the westward quite resembles a square castle, the north-east and south-west angles of which are prolonged into small but lofty crenellated turrets.

The accompanying cut (fig. 9) is an external view of this church. It shows the doorway in the west wall which led to the habitable portion of the building, and which is protected by a large machicolation connected with the roof. The doorway nearly facing the spectator conducts to the church, and the arched recess adjoining it may have been intended for a tomb or seat, and probably the former. Externally this church measures 37 feet by 26 feet, the walls being 5 feet thick, thus imparting to it an unusual degree of strength and solidity: the parapet walls are about 2 feet 8 inches thick, and are all embattled.

The east wall is pierced, at the height of about 7 feet from the ground, by a small window of two pointed lights.

It is not till we enter this building that its true character and object become apparent, and we at once perceive that we are in a lofty arched room, half church and half residence. The eastern end of this room forms a square of 16 feet 6 inches, and is groined with massive chamfered ribs, springing from each corner, and crossed by others, springing from the sides. This groining defines the limits of the church; the remaining western portion being simply arched, and is somewhat lower than the eastern, thus forming a flat tympanum overhead, against which was laid the wooden partition which screened off the living-room.

In the sill of the window on the south side, is a small piscina; and in the north and south walls, at their junction with the east wall, there are small square unornamented aumbries; to the right of the door in the west wall there is a small stoop.

* The writer says,—"It would be exceedingly interesting to Irish archæologists to be informed if churches of the thirteenth or fourteenth centuries, fortified after the manner of that of Clonmines, exist in Great Britain. Up to the present time no published record of such a building exists; but we know that Geoffrey Keating and Camden allude to the fact, that the parish churches of Ireland were used as dwellings before and after the Reformation." With reference to this point, see notice of Ancroft Church and Pele tower, Northumberland, in our volume for 1863 (xxi.), p. 909.—ED.

LEEDS AND COUNTY BANK.—MESSRS. LOCKWOOD & MAWSON, ARCHITECTS.

LEEDS AND COUNTY BANK.

AMONG the numerous buildings now being and recently erected in Leeds, its banks form a prominent feature.

The building of which an illustration is here given, was opened at the close of last year, and was erected from the designs of Messrs. Lockwood & Mawson, architects, of London and Bradford. In this building the Telegraph Company have their offices, and a Board-room and a residence for the manager are comprised in the arrangements.

Directly opposite, the new bank of Messrs. Cousins, Allen, & Co., has reached the first floor; and in the immediate neighbourhood the new building for the Leeds Banking Company has been commenced, both under the same architects.

Closely adjoining are the new Bank of England, and Messrs. Beckett & Co.'s new buildings, thus making *five* banks accommodated in Leeds within twelve months.

THE PROPOSED NEW LAW COURTS.

IN the House of Commons, on Monday last, Mr. M. Smith complained, at some length, that another session was likely to come to a close without the long-promised Government Bill on this subject; and the Attorney-General promised, late as it was, to bring in the Bill during the present session. Mr. Cowper reiterated the assurance that the architect would be chosen by public competition.

THE SOCIETY OF ARTS PRIZE PRESENTATIONS.

THE Prince of Wales presided at the distribution of the Society of Arts prizes, in Willis's Rooms, as president of the Society. Among those on the platform were the Archbishop of York, Sir Joseph Paxton, Sir C. W. Dilke, and others. About thirty-four young gentlemen were introduced to the Prince, and received prizes from him for proficiency, respectively, in arithmetic, book-keeping, algebra, chemistry, mensuration, geometry, animal physiology, conic sections, practical mechanics, magnetism, electricity, astronomy, botany, agriculture, mining and metallurgy, domestic economy, geography, English history, logic and mental science, English literature, French, German, freehand drawing, geometrical drawing, and music.

The Prince Consort's prize of twenty-five guineas, for having, in the present and three preceding years, obtained the largest number of first-class certificates, was awarded to Mr. J. Allan, of whom we have already spoken.

The Marquis of Salisbury introduced Mr. John Birch, architect, who was presented with 25*l.* and the Society's silver medal, for the best design for a labourer's cottage. There were 107 competitors for this prize.

The Swiney Prize, consisting of a silver cup of the value of 100*l.*, with gold coin in it to the same amount, awarded every fifth year, pursuant to the will of the late Dr. Swiney, to the "author of the best published treatise on jurisprudence," was awarded to Henry Sumner Maine, LL.D. (late professor of civil law in the University of Cambridge, and now member of the Legislative Council of India) for his work on "Ancient Law." The prize, owing to Mr. Maine's absence, was presented to his brother.

The winners of the Art Workmanship Prizes were next presented. They were twenty-one in number, and their performances ranged over a great variety of ornamental work, modelling in metals, repoussé work, carving in ivory, chasing, painting, &c. They were presented by Sir F. Crossley, M.P.

The Society's medal, for the discovery of, and bringing under the notice of the Society of Arts, the first imported specimens of the "balata," a gum from the Sapota Mulleri, as a substitute for gutta purcha, was presented to Mr. William Walker, Colonial Secretary of British Guiana; and Sir William Holmes, of British Guiana, received a similar reward for the introduction into the commerce of this country of the "balata" as a substitute for gutta percha.

The Albert Gold Medal, executed by Mr. Wyon, and the first prize of the kind, was given to Sir Rowland Hill. The Prince, in presenting it, stated that the Queen's portrait, which the Society also intended to present to Sir Rowland Hill, was not yet completed, but when finished it would be sent to him.

THE NATIONAL ASSOCIATION FOR THE PROMOTION OF SOCIAL SCIENCE.

THIS society will hold its eighth annual meeting in the city of York, from the 22nd to the 29th of September, under the presidency of Lord Brougham. His grace the Archbishop of York is one of the vice-presidents, and also the president of the Education department. The Right Hon. Sir James Wilde, judge of the Court of Probate, presides over the department of Jurisprudence. The other chairs have not yet been filled up. The council of the Association have found it necessary, owing to the annual pressure of business, to adopt new regulations. In each of the departments, now reduced to four, three special questions are put, and a day is to be devoted to the discussion of each, the voluntary papers being read and discussed on the remaining days. The following are the questions for the several departments:—

SPECIAL QUESTIONS FOR DISCUSSION IN JURISPRUDENCE.

1. Are the laws of real property in the three parts of the united Kingdom respectively, in their substance and tendency, suited to the present condition of society? and, if not, how should they be improved?
2. On what principle should the law deal with questions of responsibility and mental competence in civil and criminal cases respectively?
3. Whether any, and what, ameliorations can be introduced into the institution and conduct of criminal prosecutions?

SPECIAL QUESTIONS FOR DISCUSSION IN EDUCATION.

1. What improvements can be introduced into the present system of public school education? The discussion will be opened by a paper on the Report of the Commissioners appointed to inquire into the revenues and management of certain colleges and schools.
2. In what way can the grammar and other endowed schools be made more available for the education of the middle class?
3. What are the peculiar difficulties in the way of elementary education in small towns and rural districts? and how can those difficulties be removed or lessened?

SPECIAL QUESTIONS FOR DISCUSSION IN HEALTH.

1. What are the best means for disposing of the sewage of towns?
2. What are the causes, and what are the means for the prevention, of excessive infant mortality?
3. What is the influence on health of the overcrowding of dwelling-houses and workshops? and by what means could such overcrowding be prevented?

SPECIAL QUESTIONS FOR DISCUSSION IN ECONOMY AND TRADE.

1. What are the effects upon trade of the existing laws of maritime warfare?
2. Is the granting of patents for inventions conducive to the interests of trade?
3. In what respects and to what extent should Government security and supervision be applied to the provident investments of the working classes?

SCHOOLS OF ART.

The Devonport and Plymouth Schools.—Since these schools have come under Mr. Holmes's management they have progressed rapidly. The number of awards this year is double that of last year.

The Gloucester and Stroud Schools.—Thirty-seven pupils of the Gloucester National and British Schools were examined, and of these 24, or two-thirds, passed. At Stroud, 72 pupils of the National and British Schools were examined, and 51, or rather more than two-thirds, were successful. Fifty-nine pupils of the Gloucester School of Art were examined, and of these 20 passed, and 18 were classed "excellent," giving together 38 successes. At the Stroud School 65 pupils were examined, of whom 12 passed, and 15 were classed "excellent." Of the works selected from the Gloucester School two have been awarded national medallions and one "honourable mention." One "honourable mention" has been gained at Stroud; and one national medallion and several "hon. mentions" at Cirencester, and one medal at Cheltenham.

The Macclesfield School.—A testimonial has been presented to Mr. George Stewart, for thirteen years master of this school, on the eve of his departure for another and a wider sphere of labour. The testimonial consists of a silver dessert service, inclosed in a case, on which is engraven, from the design of one of the students, a complimentary inscription. This was accompanied by an address, engrossed and illuminated by one of the students, and set in a framework of carved oak made from a relic of the wreck of the *Royal Charter*.

The Chester School.—Two national medallions have been awarded to Chester, both in the two highest stages on the programme of instruction. The successful candidates are Mr. Alfred Lockwood, jun., and Mr. Alfred Bickerdike. The former receives the medallion for a complete set of designs and working drawings for a town-hall, the latter for a series of drawings made from actual measurement of the various ornamental features of the Chester Cathedral and St. John's Church, illustrating the history of Gothic architecture. This is the highest honour yet achieved by the Chester School of Art.

The Manchester School.—The medals, books, &c., awarded to the students by the Science and Art Department for the past year have been distributed, in the lecture-theatre of the Royal Institution, by the head master, Mr. W. J. Muckley, who addressed the students on the subject of their studies. Miss J. C. Shepherd received the Queen's prize. Thirty medals and two national medallions were distributed.

The Boston School.—This school is now self-supporting. The medals and other prizes were lately distributed.

The Lincoln School.—This school has obtained a national medallion, which has been awarded to Mr. A. Bellamy. There have also been twenty-two medals, besides other prizes, obtained by this school in its first year, and in the face of great disadvantages arising from want of proper accommodation.

THE ARCHITECTURAL ASSOCIATION.

THE concluding meeting of the Session of 1863-4 was held on Friday evening (the 24th ult.), at the House in Conduit-street.

The chair was occupied by the President, Mr. T. Roger Smith.

The following gentlemen were, on ballot, elected members of the Association: — Mr. R. C. F. Thomas, 67, Warwick-street Pimlico; Mr. John Bennett, 12, Wharton-street, Lloyd's-square; and Mr. J. T. Adams, 4, Upper Gower-street.

Mr. J. D. Mathews (hon. sec.) read a letter which he had received from the Patent Concrete Stone Company, in answer to a communication made on behalf of the Class of Design, requesting an extension of the period during which designs might be sent in to compete for the prize offered by the Company for the best design in the material manufactured by them. The Company expressed their willingness to comply with the application by extending the period by one month.

Attention having been called to the very interesting visit made by the members of the Association on a recent occasion to Westminster Abbey and the Chapter-house, a vote of thanks was unanimously accorded to Mr. Cowper, Chief Commissioner of Works; to Mr. Gilbert Scott, the architect to the Cathedral; and to the Dean and Chapter, for their kindness and courtesy in the matter.

Mr. G. H. Birch then read a paper on London during the Middle Ages, in which he described the bridges, walls, monasteries, churches, water supply, &c., of the metropolis proper during that period.

At the conclusion, a short discussion ensued, in the course of which Mr. Blashill described a recently-discovered well at St. Dunstan's Hill, at the bottom of which some bricks were found of the sixteenth century. He also cautioned collectors of curiosities as to purchasing many of the so-called antiquities alleged to be found at the excavations for the South Eastern Railway Company's new branch from London Bridge to Cannon-street. Here, at the Middlesex side of the river, certain enterprising individuals were collecting, and exposing for sale, a variety of objects of a very suspicious character, many of which bore the evidence of having been carefully got up for disposal to those whose enthusiasm for the antique was not commensurate with their knowledge of ancient art or history. Many genuine relics had, however, recently been found during excavations within the municipal boundaries; and it was curious to witness the vast quantity of ancient hair-pins which had come to light. In many places they seemed to have been picked up in handfuls.

The Chairman, in referring in complimentary terms to the paper read by Mr. Birch, recommended students of architecture, in a utilitarian age like the present, to turn their attention to the manner in which Gothic art might be adapted to commercial buildings. There were, he said, plenty of good Gothic church builders; but now that Gothic was coming so generally into use in our domestic buildings, it was desirable that young architects should study the

best manner in which the style might be made to answer the every-day uses of the age in which we lived.

A vote of thanks was accorded to Mr. Birch, for his paper.

The meeting then proceeded to ballot for president, vice-president, and office bearers for the ensuing year (1864-5), and the following gentlemen were elected *nem. con.*:—J. Henry Christian, president; Josiah Webber, vice-president; F. Brooks, J. Lemon, C. H. F. Lewes, H. L. Florence, T. Roger Smith, F. Sills, R. Plumbe, R. W. Edis, G. H. Birch, J. Edmeston, jun., ordinary members of committee; J. Douglass Mathews, honorary treasurer; Francis Truefitt, honorary solicitor; B. A. C. Herring, G. B. New, auditors; C. H. F. Lewes, Frederick Judge, curators and librarians; J. Douglass Mathews, Lacy W. Ridge, honorary secretaries; Henry Moody, registrar and collector.

The Chairman, in resigning the presidency, and closing the session, said he could not do so without expressing his sense of the valuable services of the gentlemen who had filled the various honorary appointments connected with the Association during the past year. From all of them he had received every possible assistance. It was also a source of great satisfaction to him (as he was persuaded it was to all who heard him), to note the satisfactory progress which the Association had made during the year just ended. All the classes had done well, and he hoped the life class would also prove a success. He hoped the ensuing year would also be marked by progress, and that the members of the class of design would exert themselves as much as possible, so that a goodly number of designs might be sent in to compete for the prizes.

A vote of thanks to the president was subsequently moved, and carried unanimously.

The meetings of the Association will for the future be held at half-past seven o'clock in the evening, instead of eight as heretofore; and the discussions on papers to be read will be brought to a conclusion as soon after half-past nine o'clock as possible.

BIRMINGHAM FREE LIBRARIES.

THE third annual report of the committee has been presented to the council. It speaks of the marked success which has attended the free library in Constitution-hill, and the unabated interest of the public therein. By returns received from twenty-three towns where free libraries have been established, it appears that the Birmingham free library has, between the date of its opening and the present time, circulated more books than any other library during the same period. The returns of the four principal towns are as follows:—

Liverpool—North District	155,866	vols.
,, South District	209,451	,,
Manchester	236,320	,,
Sheffield	341,053	,,
Birmingham	357,436	,,

During the past year 1,990 volumes have been added to the library, of which number 135 had been presented, and the remainder had cost on the average, 2s. 6½d. a volume. The total number of volumes actually lost to the library since its opening was only eight, value 11s. The issues were of course chiefly comprehended under the general head of literature, including poetry and the drama, fiction, &c., the number being 90,459; but there were a goodly number of issues of works on history and biography, voyages and travels, the number being 30,995: of science and arts there were 7,313 issues; and the total of issues was 130,520.

LOOK OUT IN SMITHFIELD.

IT is to be hoped that the excavations which are about to be made at the north side of Smithfield, near the Charter-house, and towards the once splendid home of the Knights of St. John of Jerusalem, will be carefully watched, and with intelligence. It would be strange if no remnants of the times gone by show themselves here. The diggers should not be allowed to become the tools of dealers in spurious antiquities; nor should the men be allowed to remove from the premises articles which have been dug up and are of real value. No site in the whole of what was Old London has more historic interest than Smithfield; and every scrap of information which the proposed excavations may afford will prove of use. The strata of the soil observable, and other conditions, should be noted.

FROM BRISBANE, QUEENSLAND.

THE design selected for the new houses of Parliament by the commission appointed for the purpose, is that inscribed "Concinnavi tecte; conditiones asservo;" Mr. C. Tiffin, the colonial architect, being the author, and who has therefore been awarded the first premium of 200*l.* The second prize of 100*l.* was awarded to a design inscribed "Pro rege, lege, et grege," and sent in by Mr. Stanley, clerk to Mr. Tiffin. It is probable the tenders for the work will be issued shortly after the sitting of the Parliament.

Tenders have been received for the construction of the bridge over the Brisbane river, and one has been accepted.

The new town-hall is rapidly approaching completion. As to architectural pretensions, it takes one of the first places in the colony. The new premises for the Bank of New South Wales have been commenced. The building is to be of brick and cement. Several stone stores have been erected in the vicinity of Raff's Wharf.

Operations for the formation of a reservoir for water-supply to Brisbane have been commenced at Ennoggera Creek. The Brisbane Gas Company will also soon begin building, having obtained a site for their works at Petrie's Bight, at the northern end of the town.

Numerous wooden houses are being erected in he suburbs.

CONTINENTAL BUILDING AND ART NEWS.

Paris.—Two colossal equestrian statues, the one of Francis I., the other of Napoleon I., are about to be put up at the entrance to the Champs Elysées, at the end next the Place de la Concorde. They are only in plaster, coloured with a coating of bronze, and the object is to obtain the opinion of the public, as well as of a jury to be appointed for the purpose. Should they be approved of, it is intended to cast them in iron and to place them in one of the courts of the Louvre.——The Emperor has given orders for a statue of Marshal Pelissier. It is to be erected on the new Boulevard Sebastopol.

Vienna.—A statue of Mozart is being erected on the Mozart Platz, in the Weiden suburb. It is of stone, and will be surrounded with swans. ——Haydn is also to have a statue, of metal, and Vienna artists have been invited to compete for the design. The painters Führich & Rahl, and Hansen the architect, are to be the judges; and models are to be sent in not later than the 15th of November.——The quaint old statues by Raphael Donner on the New Market-place, having suffered much from corrosion and otherwise in the lapse of years, have been taken down, and will be preserved in one of the museums. They are to be substituted by bronze copies.——The officers of the *corps d'armée* now in Schleswig have subscribed for the erection of two monuments to commemorate the loss of those comrades who have *as yet* fallen in the war—to quote the celebrated temporary Irishism on the Crimean monument in Waterloo-place, "To those who *fell, by those who lived.*" The Austrian monuments are to be placed, the one near the inn at Oversee, the other on the outskirts of the wood. Here the first encounter took place after the evacuation of the Dannewerk by the Danes.

Carlsruhe. — The Government offices, the theatre, the museum, and the Polytechnic Institute (the last instructing some 600 young men, from all parts of Germany, in engineering, architecture, machinery, and mining), have all been built within the last twenty years, and now another very large building is to be immediately begun, to contain the public library and collections of coins, objects illustrating natural history, and fine arts amongst the ancients. Only nine architects competed, although the competition was a public one, and two prizes of 2,000 and 1,000 florins were awarded; but no one of the designs was accepted. Then Mr. Bergmüller, of Carlsruhe, was commissioned to amalgamate the various features approved of, and this design is now to be carried out. The cost is estimated at 800,000 florins (80,000*l.*), and the style is that peculiar one known in Germany as the "Carlsruhe style," in contradistinction to the Berlin and Maximilian (Munich) styles, and was chiefly promulgated by Hübsch, who died a few years ago.

Westphalia. — Münster, the capital of this Prussian province, was the scene of the triumph and downfall of John of Leyden, whose life we have all followed, more than once, doubtless, in Meyerbeer's opera, the "Prophète." The Anabaptists, after having proclaimed Münster the New Jerusalem, reigned for a few months, committing all possible atrocities, substituting polygamy for marriage, and expelling all respectable and rational inhabitants. The arrival of imperial forces, however, turned the scales, and John, together with his two (not *three*) colleagues, Knipperdolling and Krechting, was caught, cruelly tortured for an hour with red-hot pincers, and then executed in the great square in 1534. The bodies were then hung up in iron cages, on the tower of the Church of St. Lambert, and the cages are there to this day. But the tower has now been reported in a dangerous state, and it is probable that it will have to be taken down entirely. The restoration of the west front of the church has already begun.

Worms.—A commission, composed of the architect Arnold, the painter Schorr von Carolsfeld, the sculptor Donndorf, and Dr. Hähnel, has visited this old city, with a view to determining the site of a statue of Luther, about to be erected. Luther attended the Diet, to which he was summoned in 1521, when, in the presence of the young emperor Charles V. and the assembled princes, he declared his adhesion to the Reformed doctrines, which the Diet finally declared to be heretical.

Hamburg.—The company called, "The London, Hamburg, and Continental Exchange Bank, Limited," is erecting very spacious premises in the Admiralty-street. Messrs. Reichardt & Wallenstein are the architects.

Darmstadt.—Professor Wideman has been requested to submit designs for a mausoleum to the memory of the Grand Duchess Mathilda, daughter of old Ludwig of Bavaria, and sister of the ex-King of Greece. The design approved of is rather a close imitation of the mausoleum by Schinkel at Charlottenburg, near Berlin, noteworthy as containing Rauch's celebrated effigies of King Frederick William III., and of his Consort Louisa, who died 1810, of a broken heart, caused by the misfortunes of her people under Napoleonic rule.

THE BUILDING TRADES MOVEMENT.

Coventry. — The strike among the builders' labourers still continues, and the masters show no willingness to give way. They think the men ought to have given notice of their intention to ask for an advance, when they could have made arrangements accordingly. The strike among the labourers affects those engaged in other branches of the trade—the bricklayers, masons, and others; who, we hear, are opposed to the step that the labourers have taken.

Birmingham.—The following is an abstract of a letter written by authority of Birmingham builders: "Sir,—A few days ago, a meeting of builders of Wolverhampton and Birmingham was held here, to take into consideration the unsatisfactory state of the labour question; and it was unanimously resolved, that the time had arrived when the builders of England should take some united action to counteract the combined power of the operatives. It was considered desirable to ascertain the feeling, and obtain the co-operation, of the general body of builders in the Midland Counties, previous to a meeting of delegates from the different towns, to be called at a time and place to be hereafter decided upon. The gentlemen present agreed to form themselves into deputations to visit the various towns in the Midland district, numbering about thirty (and including Leicester), to lay before them the general ideas, and to invite their cordial co-operation, and also to make suggestions for organizing the various towns for a future united course of action. I have the pleasure to inform you, that Mr. Jones and myself have undertaken to visit ————, and shall be glad if you will inform me, by return, if you are inclined to co-operate, &c. (Signed) J. HARDWICK, Hon. Sec."

Liverpool.—There is a good deal of excitement in all branches of the building trades in Liverpool at present, and strikes have been common. Owing to the enormous amount of work in hand among the builders, the demands made by the men have been in many cases acceded to, but in others refused, and the consequence has been the origination of an ill-feeling among the men. For the last twenty years the building trade in Liverpool has never been so brisk as at present, and works are in progress which will absorb from a million and a half to two millions sterling. The pressure being so great, the masters have

in the case of the masons and bricklayers yielded to the demands of the men for an advancement of wages. The joiners and carpenters have demanded an increase from 26s. to 28s. per week, which the leading masters have already granted. The plasterers seek an advance of 2s. (from 28s. to 30s. per week), and the plasterers' labourers an advance of 1s. (from 20s. to 21s.). The joiners and others employ men as "picquets," who "explain" matters to those who have refused to strike work. One man has been sent to gaol with hard labour for two months for "explaining."

Manchester.—In consequence of the strike of bricklayers, joiners, and labourers, employed at the assize courts, it has been found necessary, in order to have the courts ready by the day fixed for the opening of the assize, to obtain workmen from a distance. The men on strike have molested and threatened the new-comers to such an extent that the men are obliged to sleep in the building, which they are unable to leave by day or night, because of the union men outside. All the entrances to the courts are guarded by policemen, and the number of constables on duty in the neighbourhood has been increased.

Stockport.—The committee of the Operative Carpenters and Joiners' Society write to the local *Advertiser* to disclaim any threat of a strike if their wages were not increased and their hours of labour decreased, as demanded, or solicited.

York.—Following the example of other towns, the joiners of this city have been out on strike during the past week. They require an addition to their wages (which, in most cases, we understand, amount to 24s. per week) of 2s. per week; also to leave work at noon on Saturdays, and at four o'clock on the day before Christmas-day.

Sheffield.—The master joiners have resolved that all work shall be suspended until the dispute with the operatives is settled. The masters allege that they have good reason to complain of the conduct of the men in not giving a longer notice. The only subject of contention now is as to the shilling per week advance, the masters having conceded the other demands. Several of the employers assert that men can be got from distant towns who will accept the terms which the men on strike have refused. The edge-tool trade strike has terminated by the unconditional submission of the men.

Newcastle-upon-Tyne.—The painters, who are out on strike, have formed themselves into a sort of co-operative society, and advertise their willingness to execute painting, glazing, &c., on their own account.

Montrose.—The ship carpenters in all the building-yards in Montrose have addressed their employers, asking for an advance of wages of 4s. per week, to make the wages equal to what is given in Arbroath and other small towns. At present the wages are 22s. for new, and 24s. for old work.

California.—All the ironworks in California, according to an American paper, have been at a stand-still for the ten weeks previous to May 3. Iron moulders, blacksmiths, boiler makers, &c., receive 16s. per day. They have struck for 18s., and the masters refuse to pay.

Coercion.—Besides those cases already alluded to, two workmen have been committed to prison for a month, at Leeds, for threats. In this case the men, who are plasterers, endeavoured to compel their employer to discharge a non-union man by threatening to strike if he refused to do so. A disgraceful "rattening" has been perpetrated at Sheffield by union brickmakers, who have destroyed several thousand bricks, and carried off barrows, planks, &c., from a brick yard. Similar doings still continue at Stockport.

UTILIZATION OF THE METROPOLITAN SEWAGE.

FURTHER examinations have been made by the Commons' Select Committee. Mr. Laws, the artificial manure manufacturer, and a member of the sewage committee itself, stated his opinions and experience in reply to questions put by the committee. He did not agree with Lord Essex or Mr. Walker that the Rugby experiments were delusive, or did not give a sufficient account of the value of sewage for manure. The character of the grasses exposed to treatment with sewage was completely changed. He could not agree with Mr. Walker that his land had been injured to the extent of 20*l.* per acre by those sewage experiments. Sewage grass was not good for fattening cattle used alone. A thousand tons of sewage produced about 5*l.* 18s. worth of milk, reckoning the price at 8d. per gallon. Liquid sewage was best, but it ought not to be applied too profusely. Sandy soil was greatly improved by it, and land worth nothing could thus be made worth 100*l.* an acre.

Professor Way, another member of the sewage commission, also gave evidence. Water once polluted by sewage, he was of opinion, could not be chemically purified and made fit for drinking purposes. He strongly condemned the practice of allowing sewage to contaminate rivers. The only alternative was to use it for manure, and in a liquid form.

At the meeting on Monday last, Mr. Bazalgette described fully the London Main Drainage scheme.

THE BIRMINGHAM ALBERT MEMORIAL.

THE committee to whom has been entrusted the carrying out of this memorial having decided not to erect a mere statue, but to combine therewith an architectural monument, applied to Professor Chamberlain, now of the firm of Martin & Chamberlain, for a design, which has now been laid before the sub-committee.

The design provides for placing the statue on an octagonal pedestal. On four of the sides of the upper part of the pedestal will be spaces for inscriptions, and the lower part will be carved into panels containing shields for armorial bearings. The main central pedestal is connected by arched balustrades, with four bases of columns supporting the canopy. The columns are formed of the grouped shafts so familiar in Gothic architecture. The space covered by the canopy is about 6 feet square. The columns are surmounted by enriched foliated capitals, from which spring four main pointed arches, divided into tracery-like compartments by eight foliated cusps. The arches are flanked by octagonal buttresses, the spandrels being formed by enriched arcades. Crowning the arches and buttresses an ornamental cornice runs entirely round the structure, and from this four gables are carried, the external lines being crocketed, and the tympana occupied each with a large sexfoil filled with elaborate carving. Detached open pinnacles are formed on each side of the main gables with columns, cusped arches, crocketed spires and enriched finials. Two other pinnacles of a similar character are formed near this line. The richness of this, the main portion of the design, is increased by four spire-lights, which rise over the apices of the large gables, and are also enriched with crockets. An octagonal spire crowns the whole design, the angles of which are crocketed, and the apex is decorated with a foliated finial. The whole building will be raised upon a broad stone platform, which, following the general outline of the plan, will be broken at the angles round the bases of the columns. A light wrought-iron railing would surround and protect the structure. Not to detract from the effect of Mr. Foley's sculpture, the springing line of the main arches will be some feet above the top of the statue.

The general dimensions are as follows:—Width, 20 feet at base; height, to main string, 14 feet; to top of spire, 60 feet.

Executed in good sound stone, the design might be realised for about a thousand pounds; but if a better class of materials were employed, such as granite for the main piers, and various coloured marbles for the ornamental details, the cost would of course be increased. Messrs. Martin & Chamberlain are to prepare a drawing of the monument to a large scale, showing more fully the ornamental details.

"BLACK THURSDAY."

THURSDAY, the 6th of February, 1851, will long be remembered under this title in Australia, as the date of a frightful bush-fire in Port Phillip, which destroyed whole families, stations, and flocks and herds in thousands. Mr. Strutt, a pupil of M. Drolling, has chosen an episode of this event as the subject of a large picture, painted from sketches and studies on the spot, and has produced a very interesting and satisfactory work. A number of settlers are fleeing from the advancing flames on the parched plains. The road is thronged with drays laden with women, children, and sick and infirm relatives. The worn cattle are urged on by shouts and lashes. In the centre of the picture a squatter, who has but just had time to take up his wife, is fleeing with her, a ruined man, followed by a "black-fellow," carrying behind him his master's only son. Other squatters, settlers, and shepherds fill up the road; while to the left a mob of cattle and horses rush madly by, crushing over a flock of sheep which impede their course. Skeletons of the victims of previous droughts are scattered on the road side, and flights of birds are dimly seen in the lurid atmosphere. The artist was present on the occasion of this terrible occurrence, and has done well to represent the scene. The picture is exhibited in the Scandinavian Gallery, Haymarket, where there are, moreover, several other good works.

COMPETITIONS.

Liverpool. — The Wesleyan Methodists of Brighton (Liverpool) are about to erect a chapel and school premises, in Norfolk-road. Designs for these were obtained from five or six gentlemen, and that sent in by Mr. C. O. Ellison has been selected.

Wyggeston's Hospital.—One of the competitors denies the correctness of some of the names printed in our last. The list we gave was current in the town, and published by the local press.

Albert Memorial, Exeter.—A "Member of the Committee," in reply to the competitor who wrote in our last, states that the cost of the approved design is exaggerated considerably, and says the design sent by the competitor in question was poor. The last part of the reply, however, has nothing to do with the real question.

Ipswich Town-hall. The town council have again met; but temper was shown, and it was thought better to adjourn without any decision, to admit of a cooler discussion hereafter.

TENDERS FOR THE EASTERN PORTION OF THE NORTHERN LOW-LEVEL SEWER.

At the last meeting of the Board of Works, the tenders for this work were opened, and were found to be as follows:—

Ritson	£337,499	0	0
Thorn & Co.	300,748	0	0
Pearson	265,500	0	0
Furness	259,000	0	0
Brassey & Co.	258,000	0	0
Moxon	247,840	0	0
Dethick	233,000	0	0
Webster	229,000	0	0

The difference between the highest and the lowest more than 100,000*l.*

The committee recommended Mr. Webster's tender should be accepted.

Mr. Carpmael moved the adoption of this report, and bore testimony to the excellent manner in which Mr. Webster had carried out the works he had been intrusted with under the Board.

Mr. D'Iffanger seconded the motion, which was agreed to unanimously.

A WORD FOR WILKINS.

WHILE I rejoice to find that the *Saturday Review* has put in a good word in behalf of that most cruelly and stupidly maligned building in Trafalgar-square which every penny-a-liner makes his spittoon, I am shocked to learn that a gentleman in the Hon. W. Cowper's position, who may be presumed to understand something of architecture, should, if his words have been truly reported, have so slandered the National Gallery as to call it "the most ignoble, disjointed, mean, and paltry building in the world!" To give Mr. C. the benefit of a doubt, I suppose that what he really meant to say was, that the Gallery was not to be compared with some Continental ones; and if so, it is a pity that he did not qualify his language accordingly.

However unsatisfactory the building may now be considered with respect to now required accommodation—and let the Sneerings and Snarlings say what they may—it is greatly to Wilkins's credit, that, under circumstances the most unpropitious, he did so well as he did, when sadly thwarted in every way by the persons then in power. Much space was lavishly sacrificed to the dictatorial whim of letting St. Martin's Church be seen from Pall-mall East, since, had it not been for that, a second "great room" might have been obtained both east and west,—as might, in fact, be done now to the improvement of the general façades. Then, again, the building had to be halved internally between two quite distinct institutions located under the same roof; which circumstance rendered further

loss of space inevitable, if, perhaps, only to prevent a hostile collision between "Gallery" and "Academy," or old and new masters. Ill as that space could be spared, the loss was turned to some account; for, though not what it might have been made, the vista through the two screens of columns had something of the scenic in it. The chief reasonable objection to it was, that that entrance-hall was—as is too often the case—so much more pretentious than any other part of the interior as, by inevitable comparison, to cause the picture-rooms to appear still smaller than they actually are. But that defect—such as it was—has now been corrected, and the present meanness of approach to them greatly enlarges the picture-rooms to the eye.

It is one of the grievances peculiar to the profession, that the architect must submit to being interfered with, and has to truckle to the whims and fancies of others, however unreasonable. It is not so with other artists. A painter may be dictated to, in the case of a commission picture, with regard to the particular subject of it; but is left to execute it undisturbedly, to the best of his power. Altogether different is it with the architect; for he is not unfrequently compelled to act contrary to his own judgment, and do violence to his artistic feeling, out of enforced deference to those who may be mere ignoramuses in architecture, however well informed otherwise they may be, for the simple reason that the study of the æsthetics of the art is not recognised as one of the essentials of a liberal education. Here I feel myself treading on such very dangerous ground, that I had better skip over it at once. So, to leap back again, just for a minute, to Trafalgar-square, it does not say much for either the generosity or the critical acumen of Wilkins's detractors, that they ignorantly, or else wilfully, and with *malice prepense*, shut their eyes to one superlative merit in his building, namely, the majestic *pose* of its portico on an extended stylobate, in which respect it stands quite unrivalled; or, if rival it has, I should very much like to know where it is to be found.

ART LOVER.

ENGLISH *versus* FRENCH GOTHIC.

SIR,—With Mr. Burges's strictures upon the many frivolous eccentricities in modern Gothic architecture (in his late lecture) I am fully prepared to fall in; but he seems to me to have failed to point out the nobler beauties of his art. He desires that the future architecture should be grand and imposing; this to be gained in great measure by balance of parts. As to style, he prefers French Gothic; and he looks upon his whole building chiefly as a means of exhibiting sculpture of the human figure. Now in all these points I would in this letter wish to combat him. Grandeur is no essential feature of architecture: it is of no possible value, and can only emanate from vanity. When it is an expression of individual wealth, it is excessively offensive. It is a decidedly foreign trait in art, and was unknown in English work of the Middle Ages. It is rather the fruit of an ostentatious commercial wealth than of any refinement of feeling. English cathedrals do not aim at being grand buildings, but at being sweet lyrical compositions, and possess just this superiority over French cathedrals, that they are the creations of sweetly poetical delicate minds, and not of coarse, vain, boasting lovers of "glory." The sweet simplicity of the half-timbered English house is a trait unknown in Mediæval Italy, where there was no thought but that of showiness. I do not say for one moment there are not great beauties in foreign work, but I deny they are in any way nobler than the delicate littleness of English work. Delicacy is a nobler trait than showy grandeur. French Gothic is wanting in that lovely domestic character peculiar to our Elizabethan and Third Pointed.

If an architect is to consider balance of parts, he will not obtain a picturesque building; he will only obtain a monotonous façade: besides, such a theory must end in arranging the interior according to exterior. Whereas true architecture can only consider one thing, viz., use;—that is, having arranged the best possible ground-plan, the architect proceeds to build his walls; and the best possible ground-plan is that which is best suited to the wants either of the proprietor or public society for which the building is erected; and as to his doors and windows, he puts them in when required, and of the form most convenient and strong. Mr. Burges, desiring only French Gothic, has no idea of windows and arches without capitals and string-courses to connect: this is an eminently foreign idea, and is common to Mr. Burges and his school amongst the younger architects. It is not English, and is of no real value to architecture: in English domestic architecture it is quite unknown; and in the work of Mr. Webb, Mr. Bodley, or Mr. Butterfield, it forms no essential feature, these gentlemen being thoroughly English in their work.

For the exhibition of sculpture on the exterior of a building our climate is not suited: it would soon decay: it soon loses all expression. With all the attempts of Messrs. Scott, Street, Burges, &c., I cannot congratulate them on having produced a sculptor of even passable powers, either as to execution or imagination. I can see no use in a mass of third-rate figure carving.

Touching character in architecture, Mr. Burges does not entertain the slightest feeling. He does not perceive any want of national feeling in building a French building in England: he would prefer to make London a French Mediæval city rather than English: he does not appear to possess the most natural and poetic of national traits, that of desiring to hand on the traditions of his forefathers: he breaks with poetry altogether: he has no objection to railway stations of the Charing Cross character. I do not think he would even object to that roof on the top of a French Mediæval station. Inasmuch as all architecture has grown up in accordance with the wants of a people, with the surrounding scenery, and with local traditions, I do maintain that Mr. Burges violates national sweetness of feeling in desiring to introduce a foreign style into this land.

IN ILLO TEMPORE.

THE REGULATION OF COMPETITIONS.

"UNITY" has made a suggestion on this subject for which every architect should thank him.

Very much of that which can be said *pro* and *con.* has been already remarked by the Committee of the Royal Institute of British Architects in 1838, by the Architectural Association's Memorandum, or by Mr. Morgan, in his paper before the members of the Institute in 1858, and during the discussion which followed the reading of that paper. Differences of opinion were shown to exist on some of the chief points at issue; some architects approving of competitive struggling as a gain to art, if not to artists; others condemning it, as opposed to the true interests of both. Various suggestions were at that time and have since been proposed, but no definite understanding has yet been arrived at as to what is the right course for the public or for professors to adopt.

Meantime, it cannot but be admitted that the practice of competition is an overwhelming *fact*: it cannot be reasoned away; it cannot be ignored wisely; it must be dealt with as a permanent institution (the growth of free trade), whether for good or ill.

If this be so, it is idle to talk of leaving it to itself, making no effort to lead the movement into a more satisfactory *modus operandi*. The knowledge that men of established practice hesitate to compete as things now are, adds yearly to the number of quack professors and to the detriment of the profession generally.

Let the Institute take up this matter in the same manner as it did that of the "professional practice and charges of architects," of which question it is a branch; let it receive from the various architectural societies (both London and provincial), and from individual professors, the suggestions they may have to make; let it appoint a committee to consider the same, and to draw up a report containing a tabulated analysis, and accompany it with forms of conditions and instructions most suitable in their judgment, and meeting the requirements of ordinary cases. Let the report be accompanied with an exposition of the principles of professional honour and right feeling to be observed by competitors. And then, the subject having been well considered and approved at a special meeting of members, a resolution to be passed accepting the consequences of adhesion to the principles laid down; which resolution, after being signed by every member of the Institute, and other architectural societies, should be open for signature by every architect in practice throughout the kingdom, whether a member of the Institute or not.

UNION IS STRENGTH.

IPSWICH TOWN HALL COMPETITION.

SIR,—At a meeting of the council in February last, a member, in speaking of the proposed competition, said, that "he hoped they would not get into a mess, as they had done with the grammar-school competition;" but it appears from your last impression, as also from the local journals, that that feat has been successfully accomplished, nevertheless. It seems that, after having thrown out sixteen out of the twenty-eight designs, on account of deficient accommodation, the committee made no less than three distinct selections one after another, because the borough surveyor had declared the first two selections as impossible of execution. Four distinct sets of designs, therefore, have been declared impossible to execute; and the object of my troubling you with these lines is to obtain, if possible, the publication of the four mottoes, in order that the authors may have an *opportunity* of challenging the opinion of the borough surveyor, should they be able or disposed to do so. This would only be fair, and would be willingly communicated by a committee which, I have every reason to believe, is an honest one.

ONE OF THE TWELVE.

PROVINCIAL NEWS.

Harwich.—Among the new structures in the course of erection at Harwich is the Great Eastern Railway Hotel, building for the Great Eastern Railway Company. It stands within twenty yards of the sea and pier on the opposite side of the road. This large building has a frontage of 120 feet, and reaches backward about the same distance. It consists of a ground floor and three upper floors, with between sixty and seventy bed-rooms. Upon the ground floor, in front, is a coffee-room, dining-room, ladies' coffee-room, luggage-room, bar-parlour, bar, billiard-room, tavern, and smoking-room. At the back is the serving-room, kitchen, and scullery. The hotel has a wide entrance opening into a wide staircase hall, and the staircase, corridors, and landing are all stone, and fire-proof from top to bottom. Every floor is provided with baths of salt water and fresh, cold and hot, &c. The front of the hotel is of white brick, and stone dressings to the windows. The centre compartment will be covered with a pediment. The lower floor has all circular-headed windows, between each of which is a medallion upon which will be carved the heads of all the English kings and queens who have visited Harwich in the olden time. On a level with the first floor is a balcony round the whole of the front and end part of the building, and the roof has a flat 70 feet long, with an iron balustrade, to be used by visitors as a look-out on the sea. The whole of the cellars are fire-proof, and intended for bonding stores. The cost of the hotel is about 26,000*l.*, and it will be finished about Michaelmas. The architect is Mr. Thomas Allom, of London; and the contractors are Messrs. Lucas & Co. The Great Eastern Railway Company are now building a new pier of 450 feet in length, which runs in direct communication with the railway-station, and is intended to be used for the goods traffic of the new steam-ships, when the present pier will be used for passengers only.

Burton-upon-Trent.—The new bridge recently erected over the Trent at Burton, at a cost of 35,000*l.*, to replace the "old Burton Bridge," has been opened with the usual ceremonies.

Sunderland.—Messrs. Potts & Sons, architects, have been instructed by the committee appointed to carry out the proposed new Infirmary, to prepare the necessary plans for a new building to be erected on the Thornhill estate.

Newcastle-upon-Tyne.—The foundation stone has been laid of the long-contemplated deep-water dock at the Low Lights. The day was observed as one of general festivity and rejoicing. The dock will cost 350,000*l.* The walls are to enclose a space of forty-one acres, with an entrance towards the sea and one at Clifford's Fort. The seaward entrance will be protected by two piers, enclosing an outer basin of seven acres, the space between the pier-heads being 130 feet wide. Besides protecting the gates, this basin is intended for small vessels to bring up while waiting for the tide to go into the dock. The depth of water on the sill of the lower entrance is, according to Mr. Ure's plan, to be 26 feet, which is 2 feet more than the Northumberland or Tyne Docks, but it is contemplated to make it 28 feet, which would enable ships of a very large class to pass in. The western entrance

will be situate at or behind Clifford's Fort. The sea wall, inclusive of the outer basin, will extend from the Lighthouse to the black middens, below the Spanish Battery. Towards the dock will be a vertical quay wall: on the outer side it will present a rough sloping front to the waves. While the enclosed space will, as already stated, be forty-one acres; the excavations at first will only be to the extent of twenty, extending alongshore on the north side where the staiths are to be placed. As the demand for accommodation increases, the remaining space within the walls will be made available.

CHURCH-BUILDING NEWS.

Dalston.—The chief stone of a new church, dedicated to St. Mark, has been laid, by the Earl of Shaftesbury. The new church is situate in the centre of a large and increasingly populous neighbourhood, being built on a plot of ground given by the lord of the manor, Mr. J. Amhurst, and adjoining the Ridley-road, Dalston, and also the Kingsland-road. The new church is designed to meet the wants of the congregation worshipping in the temporary iron church in the Ridley-road, which is now too small to meet the requirements of the district. The design of the new edifice is Early English. In the body of the church there will be accommodation for 1,500 persons, and it is intended at a subsequent period to add galleries, with sittings for 500 more, thus affording a total accommodation of 2,000 sittings. The estimated cost of building, exclusive of spire, is 9,000*l.* The whole work is being carried out by Messrs. Dove, Brothers, contractors.

Reading.—St. Mary's Church here has been re-opened, after undergoing various repairs, alterations, and additions, very much changing the internal appearance of the edifice. A new aisle has been built on the south side of the chancel, with which it is connected by pointed arches, on a shaft of Aberdeen red granite, with carved caps, in the Decorated style of the fourteenth century, the roof being close boarded and divided into panels, with carvings at the intersections. The whole of the high pewing has been removed and open benches substituted, and the aisles repaved with black and red tiles. The old circular chancel arch has been replaced by a pointed arch, with deep mouldings, in the Early English style, supported on polished granite columns, and caps carved in natural foliage. By the Rev. A. P. Cust, vicar, the chancel has been entirely rebuilt. It was originally intended to retain the old flat roof, but the idea being subsequently abandoned, it has been replaced by a new pointed roof, the brackets supported on carved stone cornices, and the cornice with pierced tracery. Ventilation is secured by openings in the tiling. The east window is a pointed triplet, with clustered columns and carved caps. The flooring within the altar-railing is paved with Minton's encaustic tiles, the pattern being copies of tesselated paving found in excavating for the alterations, and supposed to have been part of the original floor of the church. In pulling down the north and south walls the remains of Early English windows were found, also a piscina, credence, and aumbry, which have been restored. The ceiling of the south aisle roof has been removed, and the timbers opened, &c., the gallery having also been taken away. The west gallery, which projected far into the church, has been set back, and the old organ removed, opening the west windows and tower arch. A new organ, by Willis & Co., London, is fixed in the north aisle. The new tower screen, of oak tracery and carving, has the ancient grotesque brackets and cornice from under the west gallery introduced. The new pulpit is hexagonal in form, of Caen stone, with Purbeck marble columns at the base, and serpentine marble at the angles, with carvings of natural foliage, and carved emblems of the evangelists in the panels. The windows in the body of the church are mostly new. Two of stained glass on the south side are the gift of Mr. George May. Two other stained-glass windows will hereafter be added,—the "Ladies'" and "Mary's" from subscriptions, as their titles indicate. The tablets and monuments on the walls in the body of the church have been removed permanently to the porch of the tower. Externally the church has been strengthened by the erection of buttresses corresponding with the original structure, and the gables of the new aisle, and east end, are surmounted with large crosses carved in stone. The restoration has been carried out from the designs and under the superintendence of Messrs. Clacy & Son, architects, Reading. The contractors were Messrs. Wheeler, Reading. The carpentry and joinery work has been executed by Mr. Barnicote, of Reading. The glazing was done by Mr. Freeman. The carvings were by Mr. Allen, of London. The gas standards were provided by Messrs. Hart, of Reading.

Turvey.—For the restoration of the church tower, it has been resolved that estimates tendered should be accepted, but that the sum of 220*l.* should not be exceeded. It is contemplated to pull down the upper portion of the tower, to rebuild the wall, and alter the roof (which is now a lead flat) to a high pitch, and cover it with Staffordshire tiles. A new bell is to be added to the "Village Bells," the gift of Colonel Higgins, of Picts-hill; also a hot-water apparatus for warming the church; and that the sum of 400*l.* should be borrowed on the church rates, to defray the cost of the restoration.

Gloucester.—Eight "Gurney stoves" are to be placed in Gloucester Cathedral—two in the lady chapel, two in the nave, one in each transept, and one on each side of the choir. The stoves are now being fixed by the London Warming and Ventilating Company.

Frome.—The south aisle of the parish church has been re-opened. The south arcade, south wall, and the south porch have been taken down and rebuilt from new foundations in its original style, with the exception of the latter, which has been built of a new design of the thirteenth century work. The porch generally is built of local stone, with Bath stone dressings. It contains three small trefoil-headed windows on each side, with a Bath stone ceiling. These windows will be glazed with a simple geometrical pattern. The floor is of Minton's tiles, with stone benches on each side the entrance. The old Norman doorway leading from the porch to the south aisle, has been reinstated. The entrance arch to the porch has jambs composed of clustered shafts, with carved capitals, from which springs a stone arch, with carved soffit, and ball flowers in the inner and outer mouldings. The south gable is a pediment with stone parapet. Over the entrance doorway, leading from the porch to the church, is an arcade of three openings, filled with blocks for future sculpture. The windows of the aisle are to be filled with stained glass, which is not yet completed. The whole of the south aisle has been built in harmony with the north aisle, opened some months since, with the addition of freestone bands. The south of the arcade, on the side towards the nave, has some medallions inserted in the spandrels of the arches, which are intended to be sculptured. The story windows are being glazed by Messrs. Horwood, Brothers, of Wells. The whole of the roofs are covered with lead. The pathway up the south side of the church has been lowered, to suit the new level of the porch, and also a little diverted in front of the porch, to correspond with the new plan. The aisle will be filled with the benches which it formerly contained. The roof of the nave is obliged to be supported by temporary beams, bolted up to lengthen the original timbers, the roof not being long enough to rest upon the new wall. The whole of the south aisle has been refloored. The chancel arch, with its large cracks in the spandrels, looks unsightly and threatening.

Hereford.—Mr. Mason, of this city, builder, is said to have taken the contract for the erection of Tupsley Church, to be constructed according to designs prepared by Mr. Kempson, of this city, architect.

Burrington.—The nave and tower of the church here were rebuilt for Mr. Knight, of Downton Castle, from designs by Mr. S. P. Smith, of Shrewsbury, architect.

Shrewsbury.—Abbey foregate new church has been opened for divine service. It occupies a site on the east side of the English Bridge. In plan it is a parallelogram, roofed in one span, the west front having a centre gable, with large tracery-headed window and central doorway. The tower, at the north-east angle, rises to a height of 114 feet. The south front has two tiers of windows, adapting the lighting to the interior arrangement of side galleries. The lower windows are double light, pierced with plate tracery; the upper triple light, grouped as one. The internal dimensions are 70 feet by 45 feet, divided by side aisles into three groups of sittings, accommodating, including galleries, 900. An organ-gallery is planned as an apse at the east end, the under portion being enclosed as vestries. School premises adjoin and connect with the chapel, consisting of a large room, 50 feet by 29 feet, and, on the first floor, are five class-rooms. The chapel is faced with white Grinshill stone, set rubble work, with bands of red Grinshill and dressings of Box ground stone. The interior wood-work is stained and varnished; and the roof, which is open, is tinted and stencilled. The contractors for the building were Messrs. Trow, of Wednesbury; for the heating, Mr. Dodwell, of Shrewsbury; and, for the gas-work, the Shrewsbury Gas Company and Mr. Thomason, of Birmingham. The whole has been under the direction and from the design of the architect, Mr. G. Bidlake, of Wolverhampton. The cost, inclusive of land, is between 5,000*l.* and 6,000*l.*——The collegiate church of St. Mary is to be restored, under the care of Mr. S. Pountney Smith, of Shrewsbury, architect.

DISSENTING CHURCH-BUILDING NEWS.

Coseley.—The foundation stone of a new Wesleyan Methodist chapel, at Can-lane, has been laid. The intended building will be constructed to hold 800 persons, and will be built by Messrs. Elliott & Whitfield, of Wolverhampton. The cost is to be about 1,300*l.*

Bilston (Staffordshire).—The Wesleyan Methodist Society at Can-lane, having outgrown their old chapel, have laid the foundation-stone of a new one, which is to provide 650 sittings, 200 free, and accommodation for 300 children. The building will be erected in the Grecian style, at a cost of 1,060*l.* The site is opposite the present structure.

Bootle (near Liverpool).—The Wesleyan chapel which, within the last twelve months, has been erected at Balliol-road, Bootle, has been opened for divine service. The chapel stands in its own grounds, not far from the Miller's Bridge Station, on the left side of the Balliol-road, with the school-rooms attached to it. The new building runs north and south, fronting the road, and is in the Pointed style, being an adaptation of the Early French. The ends of the front elevation are finished with flying buttresses, between which are a flight of steps and the porch. The gable is finished with a small spirelet, which is designed to act as a ventilator, and which also contains a bell. The whole building is formed of bluish grey stone with white dressings, and a slate roof; and the school-rooms are in a similar style to the chapel. The nave of the main building is 83 feet by 46 feet, and is separated from the chancel by a triple arch resting on red granite columns, with foliated capitals. One of the smaller chancel arches is occupied by the organ. The pulpit is of white stone, separated from the wall in a style usual in churches, but for some reason very uncommon in Nonconformist chapels. The roof is an open one, the chancel ceiling being coloured blue, and in the chancel are also some stained-glass windows, the gift of Mr. John Vernon, who erected them as a memorial of his father. The subjects are the Crucifixion and the Resurrection, with secondary figures of the weeping women and disciples. The pews of the chapel are of pine wood, and there is also an end gallery which contains a number of sittings. At the back of the chapel is a minister's vestry, with lavatory, a large vestry, and three class-rooms, and a capacious school-room above. The building, including its groundrent, cost 5,400*l.*, of which 4,400*l.* have been received and promised. The chapel will seat 800 persons, 216 free. Mr. C. O. Ellison was the architect.

Salford.—The foundation-stone of a United Methodist free chapel in Salford has been laid. It is to be erected in Liverpool-street, and will be in the Italian style, and built of brick, with moulded stone dressings. There will be two front entrances into a vestibule, from which there will be entrances into the body of the chapel and to the gallery. The chapel will afford accommodation for 800 persons, a large proportion free. The entire cost of the building, including heating apparatus, &c., it is believed, will be about 1,650*l.* The cost of the land was 566*l.* The architect is Mr. Belshaw, of Manchester; and the builders are Messrs. Barnes & Howe, of Fairfield and Manchester.

Castlemere (Rochdale).—The foundation-stone of a United Methodist Free Church and school was laid at Castlemere, Rochdale, on Whit-Friday. The building, which will be in the Italian style, will cost about 6,000*l.*, and is being erected from the designs and under the superintendence of Messrs. Woodhouse & Potts, architects, Oldham. Mr. Archibald Neill, of Bradford, is the contractor.

ROMAN CATHOLIC CHURCH-BUILDING NEWS.

London.—The church of St. John of Jerusalem, in Great Ormond-street, has been opened by Cardinal Wiseman. The building is in the Italian style, the front being of Portland stone, and the interior finished with marbles of various colours. The high altar is placed beneath a marble canopy standing below a cupola adorned with the same materials, the most frequent decoration being the Maltese cross of eight points, in white, inlaid in the brown veined marble. Behind the high altar is a tribune or gallery, supported by marble scrolls, which is intended for the nuns, and is ornamented in front with the arms of Sir George Bowyer, who has presented this church to the hospital. It has been constructed by Mr. Simpson, of Tottenham-court-road, from the designs and under the superintendence of Mr. G. Goldie, architect. The hospital next door accommodates forty-four patients, most of whom are incurable.

Rugby.—St. Marie's Church, which has been considerably enlarged—indeed, it may be said to have been rebuilt—has been opened. The new church is built in the Early Decorated style, from designs by Mr. Pugin. The principal entrance is in the west front, of which a view is obtained on the approach from the Dunchurch-road. At an elevation of several steps is a Gothic doorway, with carved corbels; and immediately over it is a wheel window, with six lights. The upper part of the west front has rather a heavy appearance, from the extent of plain work, unrelieved, or nearly so, by anything above the window named. The tower of the former small church stands on the right of this front; and from the fact that it is but little higher than the present high building, it presents rather an incongruous appearance. The former church now forms the south aisle, separated from the body of the building by a row of Gothic pillars and arches. At the east end is the Hibbert chantrey, enclosed by an open screen of carved woodwork. The north aisle, which corresponds in its main features, has at the western end the font, enclosed within an iron railing, and at the other end the Wilberforce chantrey, in the chapel of St. Joseph. The main body of the church is lofty, there being an open timbered roof, lighted by a number of clerestory windows, of the same shape as the lights in the west window. The side-aisles are lighted by three-light windows, most of which are now filled—as all are intended to be—with painted or stained glass. Around the walls, and let into them, are subjects from Scripture history, in bas relief. The chancel is raised above the body of the church: the eastern end is formed by three sides of an octagon, in each of which, at a considerable height, is a two-light window, separated by a pillar with floriated capital. On either side of the altar is a window of crimson glass. Mr. Denney, of Rugby, was the contractor. The stone-carving, of which there is a considerable quantity, was executed by Mr. Boulton, of Worcester.

RECENT PATENTS CONNECTED WITH BUILDING.*

FRAMES, SASHES, SHUTTERS, BLINDS, AND VENTILATORS FOR WINDOWS, &c.—*J. Hillier.* Dated 25th May, 1863.—This invention consists—First, in combining the sashes, shutters, blinds, and ventilators, intended for a window or other opening, into one apparatus, so that they may be raised or lowered by the same mechanism, and will occupy much less thickness of wall, while every purpose of light, shade, ventilation, and extent of open area will be served. Secondly, the invention consists of improved shutters of metal or wire gauze, formed by employing jambs either grooved in wood, or formed of tubes or of strips of corrugated metal forced close together or in closer corrugations. The shutters are made of splats or sheets of metal or wire gauze, or both, fitted the one upon the other by a hook-shaped groove formed upon the upper edge of the one, and engaging in a similar groove upon the under edge of the one above it, plain side edges being left upon each splat or sheet, and each working in its own groove or corrugation on the jambs. When lowered, the splats or sheets fall one behind the other into the casing behind the dado or beneath the floor. Thirdly, the invention consists in forming ventilators for insertion in windows or other opening of a strip or sheet of wire gauze mounted on a thin metal grooved frame, to the upper back edge of which is hung (by means of an open tube hinge) a sheet of glass, intended to fall close at the back of the gauze upon being allowed to do so by releasing a cord upon a pulley or a quadrant catch, which latter may then be turned over the front of the gauze, and form a lock for securing all together closely. The gauze can be removed from the mount at any time when either more light or more air may be necessary.

PROTECTING, PRESERVING, AND HARDENING SURFACES OF BRICK, CEMENT, STONES, STUCCO, &c. *S. F. Bayf.* Dated 3rd June, 1863.—For the purposes of this invention the patentee employs a compound of the soluble silicates of soda or potash (by preference, the silicate of potash), with a mixture of sulphate of baryta and carbonate of lime. The proportions he employs are the following: he takes two parts by weight of sulphate of baryta, and one part of carbonate of lime, and having ultimately mixed these he adds as much water as will form a paste, and then adds thereto a solution of silicate of potash, having the specific gravity of 1·20, until the consistency of an ordinary paint is obtained, when the mixture is ready for use. The object in using the sulphate of baryta is to prevent the too rapid combination of the silica with the lime, and so to secure the formation of the insoluble silicate immediately upon the surface coated. The mixture, as above described, is to be laid on with a brush in the same manner as an ordinary oil paint; and, to produce the maximum of hardness and durability, the material so laid on should afterwards be further saturated with the silicate of potash. If colour be required, he mixes umber, ochre, or similar substances, to give the required shade.

* Selected from the *Engineer's* lists.

Books Received.

VARIORUM.

"THE Boy's Own Volume," edited and published by Mr. Beeton, is full of adventurous stories, fully illustrated, and suggestive papers, likely to be useful. It will be popular amongst those for whom it is intended.——"The Operative Mechanics' Workshop Companion," by William Templeton, appears in the shape of an eighth edition. What more need be said? It is published by Lockwood & Co., of Stationers' Hall-court.——Borough of Portsmouth: Report on the Sewerage. By Lewis Angell, C.E., Engineer and Surveyor to the Corporation. London: M'Corquodale & Co. Portsmouth has grown to be a town of 100,000 inhabitants without *any* proper drainage; and, after many years' contention, the local Government Act has recently been applied to it, and it is hoped that a scheme of drainage such as Mr. Angell here develops will shortly be carried out. The estimated cost of this scheme is 90,000*l.*, exclusive of land, &c. The total length of main arterial and branch sewers proposed will be about forty-six miles. The point of outfall is at the entrance of Langston harbour. Storage will be combined with pumping, so as to effect the discharge of the sewage only during the ebb tide.——Great Eastern Railway Company: Statement of the Board of Directors in reference to the Great Eastern Northern Junction Railway Bill. London: Waterlow & Sons." This pamphlet is accompanied by a map of the Great Eastern Railway system, showing the proposed new line to the north of England, the communications with the docks of London, and the metropolitan districts to be served. The utility and advantages to the public of a line connecting the Great Eastern system with the north of England (in the neighbourhood of Doncaster) seems obvious, whatever influence it may have on the Great Northern as a rival line; but we cannot enter on the somewhat curious chapter in the history of railway legislation disclosed by this pamphlet, and by the rejected Bill of which it speaks.

Miscellanea.

GOOD PAPER FROM MAIZE.—The celebrated paper manufactory of Schlagelmuhl, at Vienna, has succeeded, it is said, after many attempts, in producing excellent paper from maize leaves. Paper has often been made from this substance, but on no previous occasion of so good a quality. It is stated also to be very moderate in price.

GARRICK'S VILLA at Hampton has been sold by auction for 10,800*l.* to a popular wall-advertising tailor, Mr. Grove, of Battle Bridge.

NEW BUILDING AT ROTHERHITHE.—The foundation stone of an immense building for the Patent Ventilating Granary Company, has been laid at Canada Wharf, Rotherhithe.

VANDALISM AT CLONMACNOISE.—Several of the fine old monuments at the Seven Churches, Clonmacnoise, have suffered irreparable injury at the hands of a number of young men who made an "excursion" from Birr to Clonmacnoise, and whilst the inhabitants were attending worship, amused themselves by battering with stones the carved ornamentation on the monumental crosses in the cemetery and the principal doorways of the churches. We trust the law may yet punish them as they deserve.

NEW CALORIC ENGINE.—An improved hot-air engine, invented by Mr. Roper, has, it is said, been successfully applied in the United States. Its chief peculiarity is that it does not use upon the piston common air heated, but only the products of combustion. The air to supply oxygen for the combustion of anthracite coal is pumped in: the carbon is burned rapidly and completely under pressure; and the resulting carbonic acid gas and uncombined nitrogen gas from the air are passed from the generator or fire-box to the piston. It requires about 8 lb. of coals per hour, and about twenty minutes' attention, to keep it in working order, at two or three horse-power, ten hours. The machine is said to be very compact, and can be manufactured and sold at a cost of little more than 100*l.*

BRITISH TUMULI IN DORCHESTER.—Part of the old Roman embankment at the east end of the South Walks was recently levelled for building purposes, and during the necessary operations a few interesting facts were brought to light. The first section made was in the centre of the embankment, east and west; and here, says the local *Chronicle*, the outline of an ancient British barrow was disclosed, of a very elegant bell-shape, and this only 2 feet from a second. These were evidently long anterior to the Roman embankment, which covered the apex of both to the depth of 2 feet or 3 feet. Under the floor of one an urn and some ashes were found, and in the sides several skeletons, buried apparently in haste, sometimes singly and sometimes two and three together. The skulls have been pronounced to be undoubtedly ancient British.

THE SCOTTISH MEMORIAL OF THE LATE PRINCE CONSORT.—On Monday a meeting of the local acting committee for promoting the Scottish National Memorial of the late Prince Consort, was held. The secretary intimated that the sum at the disposal of the Acting Committee was about 4,113*l.* On the motion of Mr. David Smith, seconded by Mr. Francis Abbot, the meeting unanimously agreed to authorize the treasurer to transfer the balance at his credit in the Royal Bank to the credit of the Central Committee. Bailie Blackadder expressed a hope that the competition for the plans for the memorial would be open. Bailie Auchie said that the Central Committee were at present advertising for suggestions, and he supposed that the competition for plans would also be open.

THE LAW REGARDING PARISH CHURCHES.—The purpose of the existence and endowment of parish churches is that there shall everywhere be the free means for every man to have the benefit of all the offices of religion. The church is not a building for the service of any sect. It embodies the broad fact that there shall be always, and *free to all*, the means and opportunity of the reminder, that man is not made for himself alone, nor to live here for ever. It is part of our institutions that, free and unpaid for, there shall, in every parish, be the ministry and offices of religion open to all. It has already been remarked that, though the freehold of the church is nominally in the parson, the parishioners have the use of it as a matter of right. The use is in them, though the technical freehold is in the parson. *The pews belong exclusively to them.* The ordering of the pews is the duty of the churchwardens, with the consent of the vestry. They are bound so to order them as to afford the greatest amount of accommodation to the parishioners. *The free use of the church is a common right of every parishioner.* Every man in the parish has a right to a seat without any payment. The minister cannot interfere in this matter.—"*The Parish.*"—*Toulmin Smith.*

NCH INTERNATIONAL ASSOCIATION FOR THE CEMENT OF SOCIAL SCIENCE.—This So- which was formed three years since in ion of the English society of the same holds its meeting this year at Amsterdam.

—The Stafford Gas Company have re- to reduce the price of their gas from 5s. 00 cubic feet to 3s. 9d.——The directors Rothwell Gas and Coke Company, at ring, have decided upon erecting a house al-shed at the works, and the tenders of . Barlow & Butlin for mason's work, and ohn Burditt for carpenter's work, have ccepted.

AN TELEGRAPHS. — We learn, says the *n Star*, that a proposition has lately been to connect the whole of the West India s by telegraph with the main land at nc, in French Guyana, and at Key West, Florida, if a guarantee of 6 per cent. on the can be obtained. The cost is estimated 0,000*l*.

OD AND IRON CHURCH, HIGHBURY NEW —The new district church of St. Augus- Highbury New Park, which has been d through the munificence of Mr. Henry n, the owner of property in the neighbour- has been formally opened by the Bishop ndon. It is a plain temporary iron and church, capable of accommodating about persons; the work being executed by s. Tupper & Co., of Moorgate-street, at a is we hear, of nearly 2,000*l*. The incumbent Rev. Gordon Calthrop, M.A.

KE DWELLINGS.—The *Reader* says,—The erious lake-dwellings found within the last ears in Switzerland, have now also been vered in Bavaria, in the Starnberger See. ssor Desor, from Neufchâtel, an eminent gist who, in a recent work, "Die Pfahlbau- les Neuenburger Sees," pronounced his ed conviction of the existence of such rem- on the locality where they were now dis- ed, has taken the first steps towards a fur- investigation on the spot.

CIDENT AT ELSWICK. — An accident of an ning nature has occurred at the Elswick ance Works, by which four men have been ely injured by an explosion of gas. It seems a number of men were employed at a new rnace. Some of the men were in the act cing a board in front of the furnace, having ed orders to have it in readiness for the ctors, when suddenly an explosion of a at nature took place, by which the four men severely burnt about the face, hands, and

ETROPOLITAN POLICE CRIMINAL RETURNS, —The number of persons taken into cus- by the metropolitan police in 1863 was 5 males and 21,715 females. Of these 4 males and 11,300 females were discharged he magistrates; 23,123 males and 9,553 les were summarily convicted or held to 2,758 males and 862 females were com- ed for trial; 2,239 males and 667 females convicted and sentenced; 426 males and emales were acquitted; and 93 males and emales were not prosecuted, or bills were found against them. As to the offences, were taken into custody for simple larceny; for drunkenness; 7,538 for common assaults; he highest number of all under one head- ere 9,749 drunk and disorderly characters. age, of the persons summarily convicted males and 73 females were 10 and under ears of age; 4,384 males and 1,227 females nd under 20 years of age, and 5,158 males ,956 females 20 and under 25 years of age. largest number were 4,447 males and 2,350 les 30 and under 40 years of age. Of the total ns of those taken into custody, 9,132 males, 5,249 females, could neither read nor write; 41 males and 15,292 females could read only, ad and write imperfectly; 2,587 males and emales could read and write well; and 85 s and one female had superior instruction. amount of first loss of property from felo- was 67,211*l*.; of which amount the value of 57*l*. was recovered. In 1831, out of 72,324 ons taken into custody, 48,026 were dis- ged by the magistrates; 21,843 were sum- ly disposed of or held to bail; 2,955 were nitted for trial; 1,932 were convicted and enced; 616 were acquitted; and 251 were prosecuted.

PARK-LANE.—In the Commons the other day, in reply to Sir J. Shelley, Mr. Tite stated that the Metropolitan Board of Works had come to a decision to open Hamilton-place, with the view of relieving the traffic in Park-lane.

INDURATION OF STONE.—As an improvement upon the present mode of indurating stone, cement, &c., and manufacturing artificial stone, Mr. F. de Wyldé, of Tower-hill, proposes to employ a solution of a soluble alkali, in combination with a neutral solution of alumina.

HERTS ARCHITECTURAL SOCIETY.—The annual meeting of this Society has just taken place at St. Alban's. The chair was taken by Mr. G. W. Lydekker. A paper was read by the Rev. R. Gee, M.A., Vicar of Abbots Langley, on "Bridges and Bridge-building in the Olden Time."

PROPOSED THEATRE. — The London Theatre Company is announced, with a proposed capital of 50,000*l*., divided into 5,000 shares of 10*l*. each. The object is to erect, on a site near King's Cross, a theatre capable of containing 2,500 persons, and a concert-room or bijou theatre. An estimate appended to the prospectus shows a net profit of 9,805*l*. per annum, being at the rate of nearly 20 per cent.

A STRANGE PAVING FOR DOCKS. — A curious archæological discovery has just been made at Ghent. A dock being emptied for alterations, the bed was found to partly consist of ancient tombstones in an excellent state of preservation. Seventeen have already been recovered, and others remain. They appear to have been obtained from the church of St. Tharaide, which was pulled down in the sixteenth century. The earliest date yet deciphered is said to be 1042.

HOLBORN DISTRICT BOARD OF WORKS.—PROPOSED IMPROVEMENTS IN CURSITOR STREET, CHANCERY LANE. This Board met on Monday, the 20th ult., Mr. John Ode Hall, member of the Metropolitan Board of Works, in the chair. Mr. John Walker, of Holborn, stated the substance of a proposition by Mr. J. R. Taylor, to widen Cursitor-street, which was embodied in a memorial to the Board, numerously signed by inhabitant householders in the immediate locality and in Holborn. The meeting was also addressed by Mr. Southee and other members of the board. The motion was well received, and ultimately referred to the Improvement Committee for consideration and report. We hope the report will be favourable, and that the improvement will be effected.

CRYSTAL PALACE PICTURE GALLERY. — The directors having recently offered 200 guineas for the best pictures sent by artists for the present exhibition, the judges (Messrs. David Roberts, R.A., S. C. Hall, F.S.A., and Louis Haghe) have awarded the prizes as follows:—To Miss E. Osborne, 60 guineas, for the best figure picture, No. 212 in catalogue; to Mr. J. G. Naish, 40 guineas, for best landscape, No. 333; to Mr. H. Tidey, 20 guineas, for best water-colour drawing, No. 1,345; for best French picture, to M. Cressin de la Fosse, 40 guineas, for No. 966; and for the best foreign picture (French school excepted), to M. De Bruzcker, 40 guineas, for No. 1,029.

METROPOLITAN OPEN SPACES.—In the Commons, on Tuesday, Mr. Doulton called attention to the gradual diminution of open spaces in and around the metropolis. Many of the open spaces round the metropolis had, to accommodate the population, been covered with houses, and others were undergoing the same process. Parliament had already decided that the forests should be preserved, and he hoped the Crown would not seek to interfere with that decision. With respect to the commons, he contended that the Government should purchase the whole of the rights over them. He moved that "it is the duty of her Majesty's Government to provide for the preservation of such open spaces as are within the limits assigned by the 14th section of the Enclosure Act of 1845." Mr. F. Peel said the Crown had shown no disposition to deprive the people of any rights to which they were entitled in connexion with the open spaces owned by the Crown. As to the commons, he would not agree that it was the duty of the Government to provide the means of purchasing them out of the public revenue. He therefore opposed the motion. After some discussion, in which Mr. Locke, Sir W. Fraser, Mr. Torrens, and Mr. Cowper took part, the motion was carried by 79 votes to 40.

GREAT WESTERN RAILWAY.—Mr. Gooch, the eminent engineer, according to *Herapath*, has resigned his appointment on the Great Western.

LIMNER TO THE QUEEN FOR SCOTLAND.—It is supposed that Mr. Noel Paton will succeed to the vacancy of "Limner to the Queen for Scotland." The salary attached to it is the odd sum of 87*l*.

LOCAL GOVERNMENT ACT FOR GUILDFORD.—At a public meeting held at the town-hall, Guildford, to consider the propriety of adopting the Local Government Act, the meeting have decided for the adoption of the Act by a majority of 28 to 23.

ROYAL DRAMATIC COLLEGE.—The Royal Dramatic College *fête* will be held at the Crystal Palace on the 16th and 18th of July. Great endeavours will be made. Mr. and Mrs. Howard Paul are to inhabit a grotesque edifice, resembling a huge fan opening and closing, the design of Mr. R. Phillips, of the Adelphi Theatre. Messrs. Toole and Paul Bedford are to give an exhibition of waxwork; and many other favourites will exert themselves in the cause.

DISCOVERY OF ANTIQUARIAN RELICS IN ORKNEY. Workmen employed by Mr. Mackenzie, contractor for the roads on Newhall estate, Deerness, have come accidentally on some antiquarian relics while clearing away what appeared to be the ruins of an old building near the church of Deerness. The relics, which are now in the possession of Mr. George Petrie, consist of fragments of a comb and spinning-wheel lying beside the horns and tusk of extinct animals of the deer and boar species.

NEW ROAD FROM PICCADILLY TO OXFORD-STREET.—Sir W. Fraser (in the House of Commons on Tuesday) asked the First Commissioner of Works whether he would consider a plan for a thoroughfare from Piccadilly to Oxford-street, by Burlington-house, Burlington-street, George-street, Hanover-square, and Harewood-place. Mr. Cowper said the subject was well worthy of consideration. Many difficulties, however, lay in the way, and its importance was not so pressing as many other metropolitan improvements which were under consideration.

LIVERPOOL ARCHITECTURAL SOCIETY. — On Saturday, the members of the Liverpool Architectural and Archæological Society enjoyed an excursion to Manchester. On arrival, they proceeded direct to the new assize courts, just approaching completion, at Salford, where they were received and conducted through the building by Mr. A. Waterhouse, its architect. Next the party visited the cathedral, and viewed the progress of the renovations now being carried out under the superintendence of Mr. Holden, the architect, who pointed out the portions of the ancient sacred edifice erected at various dates, commencing about the year 1400, and explained the new works, which include a tower 140 feet high. Some of the members subsequently inspected the Free-trade Hall, the warehouse of the Messrs. Watts, and other objects of interest. At five o'clock, dinner was served at the Royal Hotel; Mr. J. Boult, president of the society, in the chair.

CONSECRATION OF ST. PETER'S, VAUXHALL.—The new church of St. Peter, Vauxhall, has been consecrated by the Bishop of Winchester. This church is built on the site of the once famous Vauxhall Gardens. Schools have long ago been built; and the Prince of Wales about three years ago laid the foundation stone of the School of Art, in which the company lunched at the consecration. The church, of which the foundation stone was laid by the Lord Primate in February, 1863, is in the Early English style, and accommodates 900 people. It cost 6,400*l*. It is apparently very plain, but is capable of decoration. There is but one little window of stained glass, in the baptistery, in memory of the daughter of the incumbent. A feature in the church is a fresco of the marriage of Cana, below the second window of the clerestory, on the south side. The ceiling is of brick, painted at intervals. The seven windows of the apse are to be filled with stained glass—Our Lord in the centre, the four Evangelists round Him; and there is to be a fresco for a reredos—the Lord's Supper. The sedilia are of Caen stone, and on the pulpit is a mosaic—the Sermon on the Mount. Mr. Pearson was the architect.

RAILING, ST. ALBAN'S ABBEY. — Sir: As to your able notice of the above in last week's *Builder*, having designed and superintended the work, I should like the credit to be given to the right person. The railing was executed by Messrs. Bailey, of Holborn, London,—not as described, from Oxford.

THOMAS HILL, Architect.

THE ROYAL MEMORIAL ARCH AT FETTERCAIRN. On Tuesday, the 21st ult., the foundation stone of the royal arch to commemorate the visit of her Majesty and the Prince Consort to Fettercairn, on the 20th September, 1861, was laid by Sir John Stuart Forbes, bart.

PHOTO-SCULPTURE.—A prospectus has been issued of the International Photo-Sculpture Company, with a capital of 50,000*l.*, in shares of 10*l.*, to purchase and work the recent patent for photo-sculpture, a process which some people think will create a revolution in that branch of art. The company will be in alliance with a kindred establishment in Paris—the Société Générále de Photo-Sculpture de France—and Sir David Brewster is at the head of the Board of direction. Why a company?

THE GALLERY OF ILLUSTRATION, REGENT-STREET.—"Mrs. Roseleaf Out of Town" (everyone remembers her "Evening Party") is the best thing that Mr. John Parry has ever done, and that is saying a great deal. It presents a picture so full of life and individual character that, on looking back on it, it is scarcely possible to believe that it has all been brought before the eye and mind in less than half an hour, and by one gentleman in evening dress. Mr. Yeanay in the boat, an Italian organ-man with a monkey, the characteristics of both man and monkey being brought out with surprising distinctness; the "Town Band," who execute a waltz in a style that is recognised by all; "Miss Florence Roseleaf in the hands of Mrs. Ducker, an old bathing-woman;" and the acrobat who, while balancing one of his companions on a tall pole, has to look out for passing vehicles, are all masterly impersonations. The Egyptian entertainment, in which Mr. and Mrs. German Reed are admirable, has been shortened, bringing the plums nearer together; and, along with a Reverie of Shakspeare, makes up a capital evening's amusement.

PROTECTING METALLIC SURFACES. — An improved composition for protecting metallic articles from oxidation has been patented by the Baroness de Lavenant, of Paris. She states that by combining various solvents with a crystal base, and by the addition of colouring matters, she has obtained a product which preserves the metals from oxidation, solidifies them, and preserves their natural tint, or imparts to them any colour or varied shade. The colourless base is formed of 680 parts of glass, 250 parts of minium, 80 parts of sub-carbonate of potassa, and 100 parts of borax. The addition of about 10 parts of cobalt or binoxide of copper or steel gives a blue colour. About 3½ parts of sulphate of copper gives a green colour, and by substituting borate of iron for borax a yellow colour is produced. A jet black is obtained by adding pounded iron scale to the colourless base. To produce a red colour she takes the same substances as for the colourless base, but the proportion of sub-carbonate is increased and of minium diminished, and there are added to the base five parts of copper turnings or filings, previously immersed in white Burgundy vinegar, then dried, or with the addition of ten parts of protoxide of copper, stirred in with a copper rod. To produce a silver colour, granules of virgin silver are dissolved in nitric acid, precipitated by aqua regia, then mixed one part with four parts of borax: wood, glass, porcelain, or earthenware vessels only should be used in this operation. The various substances are weighed, broken up, mixed, and placed in a crucible previously submitted to the action of fire in an oven or furnace. The crucible is covered with coke; and, after a given time, depending upon the weight of the crucible, it is withdrawn from the fire: the matter fully fused, after being stirred with an iron rod to render it more malleable, is run out upon a metal plate with raised edges, and previously heated and allowed to cool: the matter is next broken, pulverised, and ground up with water, and is now ready for application. It is spread on or applied, with more or less water, by a brush, or by dipping, or it is sifted over the article. The articles are next baked in a muffle, or stove, hermetically closed.

THE SANITARY STATE OF LIVERPOOL. — A deputation from the local health committee have had interviews with the registrar-general and his secretary as to the desire of the committee to trace the cause of the high bills of mortality of the borough; and the registrar-general has promised to cause an abstract of the census returns of 1861, showing the number of families and the number of persons in each family recorded as residing in every house in the borough, to be prepared at the cost of the corporation. Fifty pounds is mentioned as the probable cost.

TENDERS.

For the construction of bridge over the River Mersey, at Rixton and Warburton, for the Rixton and Warburton Bridge Company. Mr. B. P. Coxon, engineer. Quantities supplied:—

Daglish	£8,805 0 0

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Pump-buckets, Bosses, Union-joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

OATES'S PATENT SOLID BRICK

MACHINE.

Persons who may be contemplating MAKING BRICKS by MACHINERY are requested to see the above Machines in operation before purchasing others. These Machines are warranted to make THIRTY PERFECT BRICKS PER MINUTE, stiff enough to be wheeled (as soon as made) to the kilns to be burnt; and from the time the clay is dug from the mine until the bricks are made and set in the kilns for burning, does not exceed five minutes. To view, apply to the GOVERNMENT DOCKYARD AUTHORITIES, PORTSMOUTH; JOHN GRUNDY, Esq. J.P. The Dales, Whitefield, Manchester; JOSEPH MARSDEN, Esq., Bolton le Moors, Lancashire; Mr. J. WALKER, Contractor, Patent Brick Works, Crewe, Cheshire; Mr. GRADWELL, Hindpool Saw Mills, Barrow in Furness, Lancashire; or at the Works of OATES, BAYLIE, & CO. Brettell-lane, near Stourbridge; parties who are working the same, and have kindly consented to give every information.

To treat, or for Drawings of same, apply to
Mr. OATES, ERDINGTON, NEAR BIRMINGHAM; or
OATES & BAYLIE, STOURBRIDGE.

WEARDE STONE QUARRIES,

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Sloped Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, as the great national shows it has been exhibited and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; awarded for under plates at the Royal Agricultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions for fixing the same, and the number of square feet required, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The Trade may be supplied on the most liberal terms, and to send the Felt DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works where the above roofing is made are F. McNEILL & CO.'S Manufacturing Establishments, BUNHILL ROW, Bear-lane, Southwark, with McNEILL'S FELT in constant use at the CAMPS of ALDERSHOT, CURRAGH, Ireland, and PORTLAND, and upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1851, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

COLES, SHADBOLT, & CO.

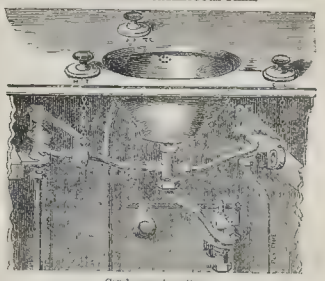
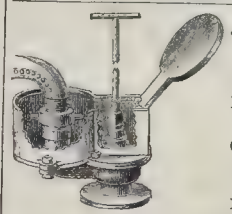
J. TYLOR & SONS' PATENT
REGULATOR WATER-CLOSETS.

Valve. Pan.



The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply pipe. No cistern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

J. TYLOR & SONS' PATENT BATH
APPARATUS.



The bath and boiler may be fixed in the same or separate rooms, anywhere below the level of cold water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.
Estimates given from architects' drawings, or by inspection of buildings.
Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

LAVATORY APPARATUS.

SALES BY AUCTION.

KENTISH-TOWN.—Materials of Twelve Houses, to clear the ground for the Tottenham and Hampstead Railway.

PULLEN, HORNE, & EVERSFIELD are instructed by the Directors of the above Company to SELL by AUCTION, at the Premises, on Monday, July 4, and following Day, at TEN, the MATERIALS and FITTINGS of the following HOUSES, viz Nos. 8, 9, and 10, Mortimer-terrace; Nos. 24, 25, 26, and 27, Fitzroy-terrace, Kentish-town-road; Nos. 3, 4, 5, and 6, College-lane; and a House in Churchill-road, Maiden-lane; comprising capital stock brickwork, sound timber in roofs and floors, door-heads, partitions, doors, sashes, slates and other fittings, slated and tiled roofs, lead gutters, pipes and cisterns, iron railing, stone coping, and other useful materials. May be viewed, and catalogues had at the Offices of F. PULLEN, Esq., 8, Adelphi-terrace, Strand; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

GREAT WESTERN RAILWAY.—Annual Clearance Sale.

PULLEN, HORNE, & EVERSFIELD are instructed by the Directors of the Great Western Railway Company, to SELL by AUCTION, at the GOODS STATION, Paddington, on WEDNESDAY, JULY 6th, and following Day, at TEN for ELEVEN, the UNCLAIMED PROPERTY in the Passengers' Department, comprising the usual assortment of wearing apparel, umbrellas, bags, railway-wrappers, and numerous other effects. Also a quantity of miscellaneous property in the Goods and Parcels Department, and a 20 horse power steam engine, left uncleared from the former Sale. May be viewed the day previous, with catalogues only, which may be had at 6d. each, of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, Westminster, and 80, Fore-street, City.

Metropolis Roads North of the Thames.—Materials of the Toll-houses, &c.

PULLEN, HORNE, & EVERSFIELD have received instructions from the Commissioners of the Metropolis Roads north of the Thames, to SELL by AUCTION, at KENSINGTON and at ISLINGTON, on FRIDAY, JULY 8, in lots, the BRICK and TIMBER ERECTIONS of 17 TOLL HOUSES, with the Gates and various Side Gates. The Sale will commence at ELEVEN for TWELVE at Kensington Gate, at which place will be sold the toll-houses, &c. at Fulham Fields, Ship-lane, Fulham; Church-lane, Kensington; Hammersmith, Harrow-road, and Edgware. The Sale will be continued at TWO for THREE, on the same day, at the Toll-house at Islington, at which place will also be sold the toll-houses at Chalk-farm, Holloway, Caledonia, Highgate, Stamford-hill, Balls Pond, Kingsland, Dalston-lane, Cambridge Heath, and City road. Also a quantity of surplus stores, consisting of iron pumps, standposts, and palisading, at the Commissioners' Depôt, opposite the Macclesfield Arms, City-road.—May be viewed two days previous, and catalogues had at the Metropolis Roads Office, 22, Whitehall-place; and of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, S.W. and 80, Fore-street, E.C.

19, MILLBANK STREET.—To Sculptors, Masons, Builders, and Others.

PULLEN, HORNE, & EVERSFIELD are instructed by Mr John Udny, agent for Count N. Lazzoni & Son, to SELL by AUCTION, at the MARBLE WHARF, 19, Millbank-street, Westm. ster, on WEDNESDAY, JULY 13, at ELEVEN for TWELVE, a large assortment of MARBLE BLOCKS; consisting of statuary, vein, Sicilian, black and gold, yellow, Siennas, verd-antique, and other marble. Approved bids at four and six months.—May be viewed two days previous; and catalogues had at the Place of Sale; and of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, S.W. and 80, Fore-street, E.C.

CITY OFFICES COMPANY (LIMITED).—Extensive sale of Building Materials, Clement's-lane, Lombard-street, to clear the site for re-building.

PULLEN, HORNE, & EVERSFIELD are instructed by the Directors of the City Offices Company (Limited), to SELL by AUCTION, on the PREMISES, on MONDAY, JULY 18, at TWELVE, in Lots, the whole of the VALUABLE MATERIALS of the extensive Block of Buildings forming Nos 25a, 26, and 27, Clement's-lane, Nos. 1, 2, 3, and 4, Bridge-street-range of coach-houses and stabling, and other buildings, covering a large area of ground in Hart-street, Fell-street, and Monkwell-street, Wood-street, City.—Further particulars in a few days, when catalogues may be had of JOHN COLLIER, Esq. Architect, 26, Philpot-lane; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament street, S.W.

PIMLICO.—Materials of several Houses and Shops, to be cleared away for the extensive improvement of the district.

MR. GEO. HAINES is instructed to SELL by AUCTION, on the PREMISES, on TUESDAY, JULY 7, at TWELVE o'clock, a large quantity of excellent BUILDING MATERIALS of a yellow brick, of Queen-size with six other houses; including all the sound brickwork, lead down-pipes, slated roofs, with strong rafters, the usual internal fittings, shop fronts, erection of cow-sheds, and fixtures.—May be viewed. Catalogues on the Premises; of Messrs. HAINES & SON, Auctioneers, Mornsgate-street, City; and at the Auction Mart Offices, Grosvenor-street West, Eaton square.

NEW SOUTHSEA, HANTS.—Valuable Freehold Estate, with Building Ground, close to Havelock Park.

MESSRS. PRICE & CLARK are instructed to SELL by AUCTION, at GARRAWAY'S Coffee House Change Alley, on TUESDAY, AUGUST 2, at TWELVE for ONE o'clock, the important FREEHOLD ESTATE known as Firdale-villa, New Southsea, comprising a capital and substantially-built Family Residence, stabling, and coach-house, and pleasure grounds; the whole containing about eight acres, and is well adapted for the formation of a public institution, or for a genteel building site for the Family Residences of Naval & Military Officers. Lowe's Church and the newly-erected beautiful residences in that locality. The surrounding property is rapidly rising in value, and the capabilities of this particular estate as a building site are highly favourable, offering an advantageous opportunity to capitalists, builders, and others to form a good and profitable investment. The property may be viewed, and the sale by application to Mr. CARLILL, 7, Union-street, Portsea; and particulars with plans may be had 14 days preceding the Sale of Messrs HILLARD & SON, Solicitors Portsmouth; and at the Auction Offices of GARRAWAY'S, and the Offices of PRICE & CLARK, 48, Chancery-lane.

TO CONTRACTORS, BUILDERS, AND OTHERS.—TO BE SOLD by AUCTION, by

MESSRS. S. NEWMAN & J. SAVILL, who are prepared to proceed in this sale, at the HORN INN, Braintree, on WEDNESDAY, JULY 6th, 1864, at FOUR o'clock in the afternoon, by direction of the Trustees for sale of the estates of the late C. A. Hilton, esq. deceased, a valuable small ESTATE, comprising a brick-built and tiled messuage or tenement, brick kiln, stable, and other buildings, and six enclosures of very excellent arable and meadow land, containing 18a. 3r. 17p. or thereabouts, now in the occupation of Mrs. Robert Buck Kartt, situate on the parish of Bocking End, and Great Maplestead, in the county of Essex, on the Colne Valley and Halstead line of railway, and contiguous to the Bocking and Braintree station and goods yard at carriage road stations on the Great Eastern Railway. Also, other Freehold, Copyhold, and Leasehold Properties, consisting of a Leasehold Farm, called "Pigeons," containing 90a. 2r. 29p., pretty fields, containing 30a. 2r. 2p., Warrick's Piece, containing 3a. 1r. 3p., and other fields all situate in the parish of Sible Hedingham, and which will be SOLD, in 19 Lots. Plans and particulars of sale may be had of Messrs. HOLMES & SON, Solicitors, Bocking; and of the Auctioneers, Rayne, near Braintree, and Grange Hall, Gosfield, Essex.

RAILWAY CONTRACTORS' PLANT AND IMPLEMENTS, DEVIZES AND HUNGERFORD.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on WEDNESDAY, JULY 6, 1864, and following days, at SEVEN for TWELVE o'clock precisely, on ground adjoining the Railway Stations at Hungerford and Devizes, CONTRACTORS' PLANT and IMPLEMENTS used in the Construction of the Berks and Hants Railway, including 100 capital earth waggons, side and end tip, 50 tons contractors' rails, 5,000 sleepers, 100 navvy-barrows, 500 wheeling-planks, 150 loads sound fir timber, 30 loads ash and elm, 5 dobbin-carts, 3 timbril carts, 1 timber carriage, 1 light cart, dog cart, 2 phaetons, harness, 100 large wood centres, 500 transoms, battens, 2 tons new bar and rod iron, 10 tons scrap iron, weighing machine, scales and weights, stocks and dies, smiths' tools, screw jack, leather bands, 12 circular saws, office furniture, iron safe, and other effects, on the ground. The land (2 crosses) comprising workshops, portable office, and Hants Railway including 100 capital earth waggons, side and end tip, 50 tons contractors' rails, 5,000 sleepers, 100 navvy-barrows, 500 wheeling-planks, 150 loads sound fir timber, 30 loads ash and elm, 5 dobbin-carts, 3 timbril carts, 1 timber carriage, 1 light cart, dog cart, 2 phaetons, harness, 100 large wood centres, 500 transoms, battens, 2 tons new bar and rod iron, 10 tons scrap iron, weighing machine, scales and weights, stocks and dies, smiths' tools, screw jack, leather bands, 12 circular saws, office furniture, iron safe, and other effects, on the ground. The land (2 crosses) comprising workshops, portable office, and new wire lines, 5 tarpaulings, pug-mill, the erection of stabling and workshops, portable office, and new wire lines, 5 tarpaulings, pug-mill, the erection of stabling and workshops, portable office, and new wire lines, 5 tarpaulings, pug-mill, the erection of stabling and workshops, portable office, and new wire lines, 5 tarpaulings, pug-mill, the erection of stabling and clay-working machines, 1 hand power ditto, quantity of fire-wood, and numerous other effects. To be viewed on Tuesday previous and mornings of Sale, when catalogues may be had on the Works, and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

Valuable STEAM SAW-MILL, PLANING and MOULDING MACHINERY, &c. Herrington-street and Grafton street, with accommodation Land adjoining.—By

MR. EDWARD CHALONER, on WEDNESDAY, the 13th of JULY next, at TWELVE o'clock precisely, on the PREMISES, in Harrington-street, subject to such conditions as shall be then and there produced (the two Properties will be put up together at the upset price of 20,000l.) all that piece of LAND, situate on the west side of Grafton street and east side of Harrington-street, in Bethnal Green Park, in Liverpool, with a frontage of 65 yards to each of the said streets, and being 110 yards in depth, and containing 5,000 square yards, together with the Steam Saw mills and other Buildings thereon erected, well known for many years as the Brunswick Steam Saw mills, with the boilers, steaming, and sawing, planing, and moulding machinery, fixtures, and tools as they now stand in full working order. And also all that piece of LAND, situate on the east side of Hamilton-street aforesaid, and west side of Mann-street, with a frontage to each of such streets of 100 yards, and bounded on the north by Northumberland-street, with a frontage thereto of 45 yards, and containing altogether 4,500 square yards. Both of these properties are close to the new goods station of the Liverpool and Garston Railway Company, and to the Brunswick Dock. The mills have been worked up to the Office on the Premises.—For further particulars and for catalogues of the Machinery, apply to Mr. WILLIAM FOSTER, Solicitor, 38, Cannon-street, London; to Messrs. LOWNDES & CO. Solicitors, 3, Brunswick-street, Liverpool; to Mr. EDWARD WHITLEY, Solicitor, 6, Water-street, Liverpool; or to EDWARD CHALONER, Broker, East side Queen's Dock, Liverpool.

BY MR. EDWARD CHALONER.—On WEDNESDAY, the 13th of JULY next, at TWO o'clock in the afternoon precisely (unless previously disposed of by private treaty, of which due notice will be given), at the CLARENDON ROOMS, South John-street, Liverpool, subject to conditions of sale to be then produced; being the remainder of the property of Mr. John M'Laughlin left unsold at the sale on the 21st instant. As it is important that the estate should be realised as soon as possible the reserve prices on the various lots have been considerably reduced.

Lot 1 THREE MESSUAGES, forming Nos. 42, 43, and 44, Oxford-street, Liverpool. The tenure is leasehold under the corporation of Liverpool for the residue of a term of seventy-five years, from the 6th day of June, 1864, at a peppercorn rent. If not sold in one lot these three houses will be offered separately.

2. A MESSUAGE, being No. 102, Crown-street, Liverpool. The tenure is leasehold under the corporation of Liverpool for the residue of a term of seventy-five years, from the 14th day of May, 1831, at a peppercorn rent.

3. A Piece of FREEHOLD LAND, with frontage to Rishton-street and Breckfield-road North, Everton, containing on the south side, in front to Rishton-street, 92 feet 1 inch; on the east side, in front to Breckfield-road, 30 feet and 3 inches; containing in the whole 574 4-9ths square yards or thereabouts. Together with the Three Dwelling-houses thereon erected, two of which front to Rishton street, and the third is intended for a public house, and fronts to Breckfield road North. These buildings are not quite completed, but a very small outlay will be sufficient to complete them.

4. A Piece of FREEHOLD LAND, on the east side of Grey Rock-street, West Derby-road, with a frontage thereto of 89 feet 7 inches, and a depth of 45 feet. Together with the Six nearly-finished Dwelling-houses erected thereon.

5. A Piece of FREEHOLD LAND, situate on the west side of Dovestreet, and north side of Selby street, Lodge lane, Toxteth Park, with a frontage to Dove-street, reserved, of 102 feet, and to Selby-street of 43 feet 6 inches, and containing in the whole 493 square yards, or thereabouts. Together with the Seven Messuages and shops erected thereon, and numbered 1, 2, 3, 7, 9, 11, and 13.

6. A Piece of FREEHOLD LAND, situate on the south-west side of Fore-street, Birkenhead, with a frontage thereto of 79 feet 4 inches, and extending on the whole to the River Mersey in the rear thereof. Together with the Six several Messuages and Dwelling-houses erected thereon, and fronting Fore-street, and numbered 23, 27, 29, 31, 33, and 35.

7. A Piece of FREEHOLD LAND, situate on the north-west side of Claughton-road, in Birkenhead, with a frontage thereto of 88 feet 9 inches and containing in the whole, including one half of the common passage, 477 and 6-9ths square yards, or thereabouts. Together with the FIVE MESSUAGES thereon erected, and being numbered 140, 138, 136, 142, and 144, in Claughton-road.

For further particulars apply, as to Lot 1, to Messrs MINSHULL & HORNER, Solicitors, Exchange-alley North; as to lot 2, to Mr CROPPER, Solicitor, Fenwick-buildings, Harrington-street; as to lot 4, to T. J. SMITH, Solicitor, Newington; as to lot 5, to J. F. HARRIS, Solicitor, 5, Clayton-square; as to lot 6, to Mr J. O. JONES, Solicitor, 58, Castle-street; and as to the whole, to Mr. WILLIAM FOSTER, Solicitor, 38, Cannon-street, London; to Messrs. LOWNDES & CO. Solicitors, 3, Brunswick-street; Mr. EDWARD WHITLEY, Solicitor, 6, Water-street; or Mr. EDWARD CHALONER, Broker, east side Queen's Dock, Liverpool.

OXFORD.—To Speculators and Building Societies.—Most valuable Freehold Building Ground, St. Giles', and the City of Oxford, in proximity to the main street, St. John's College, Worcester College, the Clarendon Printing Office, Beaumont-street, St. John's street, and the Railway Stations

MR. JOHN FISHER begs to announce that he is instructed by the Guardians of the Oxford Incorporation to offer for SALE by AUCTION, at the TOWN HALL Oxford, on WEDNESDAY, JULY 27, at TWO for THREE o'clock in the afternoon, in One Lot, all that Valuable BUILDING LAND, comprising the sites of the present Workhouse and Gardens, consisting of 4a. 2r. 9p. with every convenience for building. The property is free from tithe, and the land-tax is redeemed; it offers the finest opportunity that has ever occurred in Oxford for building the Building Lots, for many years to come, from its great extent, both combined. Further particulars may be known, on application to Mr. JACOB, Clerk to the Board of Guardians, St. Giles's-street; or the Auctioneer's, High-street, Oxford where plans may be seen.

8 and Portion of a Timber Merchant's Stock to be SOLD, by order of the Proprietor retiring from business.

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Chesshiton street, Somerstown, on MONDAY, JULY 11th, at TWELVE, a quantity of MAHOGANY PLANK and BOARD, beech, birch, cedar, walnut, whitwood, dry pine, yellow and white deals and battens (prime and cull) many stocks of rosewood and other veneers, fancy sparwood, planes, bits, stair battens, and a carcase of wood, for a fine-toned pianoforte.—Auction Offices, 2, Cardington-street, Hampstead road.

TO PUBLICANS, BUILDERS, AND OTHERS.—FREEHOLD INVESTMENTS, Kentish-town, within a mile of the City.

GEO. TODD is instructed to SELL by AUCTION (and may be leased by Private Treaty), at GARRAWAY'S (prior to the Sale), Change-alley, Cornhill, on WEDNESDAY, 6th JULY, at TWO, the genuine old-established RESIDENCE, known as Spread Eagle, situate at the Corner of the Royal Oak-road and Bower-street, well adapted for conversion into a first-class tavern or shop, which are in great demand in the locality. Also a capital Villa, with dwelling-house and shop adjoining, in the rear of the erection of shops, lower well situate in the Bridge-road and opposite Church street. The whole of the property is close to the new Park, and in close proximity to the Government Building Land. For further particulars, apply to Messrs. H. & F. CHESTER, Solicitors, No 1, Church-row, Newington; at the Auction Offices, Nos. 1 and 2, Chapel-place, Bridge-road, Battersea Park, S.W.

FREEHOLD BUILDING LAND, Battersea, Surrey, close to the New Park, and giving Votes for the County.

GEO. TODD will SELL by AUCTION, on WEDNESDAY, 6th JULY, at GARRAWAY'S COFFEE HOUSE, Change alley, Cornhill, at TWELVE for ONE o'clock, the Second Portion of the SPENCER LODGE ESTATE, consisting of 57 Plots of FREEHOLD BUILDING LAND, suitable for the erection of villa and cottage property, and well adapted for the erection of a commercial centre to freehold ground rents, including a valuable plot at the corner of Park-road and Elsha street, admirably adapted for the erection of a first-class tavern.—Particulars, with plan, may be had of Messrs. H. & F. CHESTER, Solicitors, 1, Church row, Newington Butts, and on the Auctioneer's Offices, Battersea Bridge-road, Battersea Park, S.W.

BEULAH HILL NORWOOD.—Twenty four Acres of valuable Freehold Building Land, within about a mile of the Norwood Junction, Crystal Palace, and Lower Norwood Stations, and about five minutes' walk from the Thornton Heath Station, affording access to London Bridge, Victoria, and Charing Cross, at frequent intervals throughout the day

MESSRS. DEBENHAM & TEWSON will SELL at the GUILDHALL COFFEE HOUSE, near Guildhall, on WEDNESDAY next, JULY 13, at ONE punctually, in one lot, 24a. 1r. 7p. of very valuable and nearly all FREEHOLD BUILDING LAND, situate on the western slope of Beulah Hill, about three minutes' walk from the Church. The land possesses considerable frontages to the Grange-road and Oakdene-road. It commands extensive and beautiful views, is surrounded by a rapidly increasing neighbourhood, and offers eligible sites for villas or cottage residences. The whole is Freehold with the exception of 1a. 3r. 27p. which is Copyhold of the Manor of Croydon.—Particulars of Messrs. THOMAS & ROLLS, Solicitors, Commercial Sale Rooms, Mincing-lane; and of the Auctioneers, 80, Cheapside.

SYDENHAM AND FOREST HILL.—Valuable Plots of Freehold Land, between the Catford-bridge and Forest-hill Stations, offering capital sites for residences.

MESSRS. On view day prior.

CONTRACT CART HORSES, from the Northern Outfall Sewer Works, Plaistow.—TO BE SOLD by AUCTION, by

MR. J. GOWER, at his REPOSITORY, Barbican, on FRIDAY, JULY 8th, at ONE o'clock, without reserve, Twenty well known young active CART HORSES, by direction of that eminent Contractor, Mr. G. Furness. Sold in consequence of the works being nearly completed. On view two days prior.

TREGANTLE FORT, CORNWALL, four miles from Fipmouth.—To CONTRACTORS, MINE AGENTS, BUILDERS, and OTHERS.

MR. HENRY SENDEY has received instructions from Messrs. Kirk & Parry, who have completed their Contract, to SELL by AUCTION, on TUESDAY, JULY 12th, 1864, and following days, upon the Works at TREGANTLE FORT, their most complete and valuable CONTRACTOR'S PLANT and MACHINERY comprising steam engines and boilers, two sets of winding gear, large main iron and steel wire ropes, by Newall, of Gateshead, and apparatus by Nicholls & Co. of Tavistock, for working an incline tramway, ½ mile long; a railway weighing-machine, by Nicholson, of Warrington; 150 tons of fish jointed and other railway metals, switches, points, and crossings; 40 railway waggons and trollies; 22 valuable Lincolnshire and other horses, in excellent condition, with all their gear complete; a complete set of stable utensils; 20 three-wheeled and other carts; wheelbarrows and planks; a powerful 6-ton derrick crane, and two smaller ditto on movable plate rims, by Forrest & Son; two 5-ton Forrest travelling winches, capable of lifting from four to six tons, with carriages, driving shafts, and thrusting bars complete, adapted to spans of from 30 feet to 60 feet; one 30-ton lever balance; all the usual masons, sails, and spars, complete; carpenters' benches; masons', quarrymen's, and complete sets of blacksmith's tools; bellows, anvils, &c. Also twenty Workman's Cottages, temporary dwelling-houses, engine-houses, carpenters' and smiths' workshops, and brick and tiled offices, with fittings, as now standing. May be viewed seven days preceding the day of sale, at Catalogues had of Mr. HENRY SENDEY, the Auctioneer, Ridgway, Plympton; of the Agent, on the Works; at the Globe Hotel, Chubb's Commercial hotel, the Albion, and the Prince of Wales, Plymouth, at the Royal Hotel and Steam Packet Commercial Hotel, Devonport, and at the principal inns throughout Devon and Cornwall. Sale to commence each day at half-past TEN A.M. Refreshments will be on the table from One to Two, after which time no lot will be sold by Auction, obtained from the Auctioneer. Mr. H. Sendey begs to call the particular attention of the public to the above valuable Stock and Materials, as the greater part has been in use only for the Tregantle Contract, and consequently is in first rate working condition.

June 14th, 1864.

MEDWAY LIME and CEMENT WORKS.

TO BE DISPOSED OF, the well-established BUSINESS, now in full operation, of the MEDWAY LIME and CEMENT WORKS, situate at Halling, a station on the South Kent Railway, near, and on the banks of the River Medway, together with the Mineral Rights, Plant, &c. The Works comprise a wash mill with drying floor, three cement kilns, a mill with three pairs of stones and crushing rolls, engine house, one 10-horse power steam engine, coal to be lease power, three steam boilers, chimney-shaft, range of eight dome-head lime-kilns, a tunnel kiln, spacious chalk-pit, landing wharf on the banks of the Medway, with load weighing beam, power, &c. The sale comprises all the buildings and erections on the Spot. The South-Eastern Railway intersects the property, from which a siding has been made. The Works have been built for the supply of the cement made adjoining, for which there is an unlimited demand. In connexion with the property are a Farm House, with out-buildings, three cottages, and about 30 acres of Meadow and Arable land, and several pieces of parcels of land, containing about 2a. 2r. 20p. and also Two Freehold Houses at Hastings.—For particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

72—74, Bishopsgate-street Within.

CONTRACTS.

LANCASHIRE and YORKSHIRE RAILWAY.—The Directors are prepared to receive TENDERS for the CONSTRUCTION of a BRANCH RAILWAY from Amiree to the North Shore at Bootle, Liverpool. Plans and specifications may be seen, and forms of Tender obtained, at the Engineer's Office, Hunt's Bank, Manchester, on and after FRIDAY, the 24th of JUNE instant; and TENDERS, properly endorsed, and addressed to the Directors, must be delivered to the Secretary not later than TUESDAY, the 12th JULY proximo.

WM. S. LAWN, Secretary.

Manchester, 10th June, 1864.

CONTRACTS.

BLACKFRIARS BRIDGE. — TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and in steps, Roach, Portland, and rough rubble. Also for the headstone columns, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

TO PAVIORS and OTHERS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City, on TUESDAY, the 12th day of JULY, 1864, at half-past TWELVE o'clock precisely, to receive TENDERS for REPAVING the Carriageway of Moorgate-street, agreeably to a specification, which may be seen at this Office. Persons Tendering are required to give the names and addresses of at least two substantial householders as their sureties, to enter into bond with the Contractor for the due performance of the Contract. The Commissioners do not pledge themselves to accept the lowest Tender, or any, unless deemed satisfactory, and no Tender will be received after TWELVE o'clock on the day of treaty.

JOSEPH DAW, Principal Clerk.

Sewers Office, Guildhall, 28th June, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of NEW FARM BUILDINGS, at Eaveusden, near Bedford, the property of John E. White, esq., of Kempston, in the county of Bedford, may see the plans and specifications by applying to the present occupier, at the Farm House, from MONDAY, the 4th, till FRIDAY, the 15th JULY (inclusive). Tenders to be sent in on or before TWELVE o'clock on SATURDAY, the 16th instant, to WILLIAM WATSON, Surveyor, Henlow, Biggleswade. The lowest or any Tender will not necessarily be accepted.

Henlow, June 30th, 1864.

TO BRIDGE-BUILDERS and CONTRACTORS.—It is proposed to CONSTRUCT a CAST-IRON BRIDGE over the River Stort, at Bishop's Stortford, near the Railway station. Persons desirous of TENDERING for these Works, may see the drawings and specification on application to Mr. FOWLER, at the Mechanics' Institute, Corn Exchange, Bishop's Stortford, on FRIDAY next, the 1st JULY, between the hours of NINE a.m. and SIX p.m. up to WEDNESDAY, the 13th JULY.—Tenders to be delivered to me on THURSDAY, the 14th JULY, under cover, endorsed, "Tender for the Erection of a Bridge at Bishop's Stortford." The Committee do not pledge themselves to accept the lowest or any Tender.—By order of the Bridge Committee.

GEORGE FERRY, Surveyor.

Bishop's Stortford, 28th June, 1864.

TO BUILDERS.—TENDERS will be received for sundry RESTORATIONS to, and for RE SEATING and RE-ROOFING with LEAD, the Parish Church of Lugwardine, near Ludlow.—The plans may be seen at the Offices of the Architects, in Hereford, and upon application to the Parish Clerk, at Lugwardine. The Tenders are to be delivered to the Architect, on the 22nd instant, and no pledge is given that the lowest will be accepted.

THOMAS NICHOLSON, F.I.B.A. Diocesan Architect.

Hereford, 1st July, 1864.

TO BUILDERS.—Contractors desirous of TENDERING for various WORKS required, in ADDITIONS and CONSTRUCTION of New SCHOOLS, OFFICES, and FARM BUILDINGS, at the Primitive Methodist Training College, Flaxfield House, near York, may see the plans and specifications, and receive further information, of Mr. HERBERT FIPPARD, Architect, 3, Frances-terrace, York, up to WEDNESDAY, the 20th instant, when sealed Tenders are to be delivered.

SAINT OLAVE'S UNION.—To PAINTERS and OTHERS.—The Guardians of the above-named Union are desirous of receiving TENDERS for PAINTING the whole of the external portion of the BUILDINGS of the WORKHOUSE belonging to the said Union, situate in Parish-street, Horsleydown, and for some REPAIRS to the same. A specification of the said works may be seen at the Office of Messrs. SNOOKE & STOCK, Architects and Surveyors, No. 6, Duke street, London Bridge, Southwark, and Tenders clearly and legibly written, directed to the Guardians or Clerk, and endorsed "Tender for Painting," are to be delivered at the above-mentioned Workhouse, by THURSDAY, the 21st day of JULY instant, by TWO o'clock in the afternoon at the latest.—Any further information may be obtained from the above-named architects, at their said Office. The Guardians do not bind themselves to accept the lowest or any Tender. By order of the Board,

CHARLES WELBORNE, Clerk to the Guardians.

17, Duke street, London Bridge, Southwark, July 1, 1864.

TO BUILDERS. — Builders desirous of TENDERING for the ERECTION of a HOUSE at Kidwelly, South Wales, can see the plans and specification at 21, Guildford-street, London, W.C.

M. C. W. HORNE, Architect.

A FREEHOLD MANSION TO BE SOLD. The elegant furniture may be had at a valuation. There are four reception rooms, two being 20 feet in length, sixteen bed and dressing rooms, stabling for eight horses and coach house for four carriages, kitchen-garden, offices, extensive ornamental grounds, with greenhouses, in all 2a. 0r. 35p. (nearly), forming a most desirable residence, situate on the Western Parade, half a mile from Windsor Great Park, and 23 minutes from the Waterloo station.—Apply to J. BOWEN MAY, Esq., Solicitor, 17, Russell square.

LORDSHIP ROAD, Stoke Newington.—TO BE LET, on Building Leases of 99 years (at low ground rental), several PLOTS, eligible for semi-detached villas and terraces.—Apply to Mr. RODDA, Bourne-road, Church-street, Stoke Newington. N.B. Bricks supplied on the estate at low prices.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views. — Apply to A. B 192 Bermondsey-street, S.E.

LEWISHAM, KENT, near the Junction Station of the Midland North Kent lines.—TO BE LET, TWO PLOTS of GROUND, each for a Pair of Small Villas. Also, a Plot for Three Pairs. Ground rent 3l. per house.—Apply to THOMAS MILLS & SON, Builders and Agents, 28, York-street, Westminster, S.W Leases 99 years, direct from freeholders. No advances.

WATERSIDE PREMISES, City-road.—Messrs. FULLER & HORSEY are instructed to LET, on LEASE, from Michaelmas next, extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City road, and comprising a spacious and substantial modern [illegible] manufactory of two floors, engine and boiler houses, with 70 horse power steam engine and three Cornish boilers, range of brick-built offices, and paved yards with gateway entrances There is a water frontage of about 90 feet For further particulars apply to Messrs FULLER & HORSEY, 13, Billiter-street, London, E.C.

BUILDING LAND TO BE LET, situate at Vauxhall, Leytonstone, and Camberwell.—For particulars apply to Messrs. DRIVER & CO. 4, Whitehall, London, S.W.

TO BE SOLD, a FREEHOLD ESTATE, near London, and near a railway station communicating with the Metropolitan, the Kensington, and other Railways Price moderate It consists of a superior farmhouse and buildings, with 18 acres of rich pasture land in a ring fence. It abounds with first-class brick earth, and presents large frontages to good roads, forming excellent sites for building, and it possesses many other advantages which render it a most desirable investment. The greater portion of the purchase-money may remain on mortgage at 4 per cent.—For plans and particulars, apply to Mr. DEAN, Architect, 123, Chancery-lane.

DARTFORD, Kent.—FOR SALE, valuable FREEHOLD BUILDING LAND, in plots of 50 feet frontage and upwards, at Dartford New town, about half a mile from the railway-station.—For particulars, apply to A. RUSSELL, Esq Solicitor, Dartford; or to Messrs. COBB, Surveyors and Land Agents, 26, Lincoln's-inn-fields.

ACTON.—TO BE LET, on a Repairing Lease, a Small HOUSE and GARDEN. The ground, which is 50 feet by 100 feet, has two frontages, and is well adapted for building purposes.—For particulars, apply to Mr. SAMUEL FIELD, Surveyor, 11, Bedford buildings, Strand, W.C.

TO BE SOLD by PRIVATE CONTRACT, upwards of NINETY FREEHOLD and long LEASEHOLD HOUSES, situate near the railway stations at Blackheath, New Cross, and Peckham; also at Old Ford road, Victoria Park, De Beauvoir-town, and Gravesend; also Two Houses and Shops in Fort-street, Spitalfields. The rentals of the houses range from 30l. to 40l. per annum The above houses and shops are well worthy the attention of Builders and persons of small capital seeking profitable investments, as three-fourths of the purchase-money may remain on mortgage.—Full particulars will be given on application to Messrs. WATTS, Rolls chambers, 84, Chancery lane, W.C.

LARGE HOUSES are REQUIRED at WANSTEAD. The Grove Estate is five minutes' walk from the station Money and materials advanced. -THOMAS EDWARD KNIGHTLEY, Architect, 25, Cannon-street, City.—The Freehold may be purchased

NEWLY and most substantially erected WAREHOUSES and LAND, occupying an area of nearly half an acre, near the entrance to the London Docks, well adapted for bonded warehouses, TO BE LET on LEASE, or the Freehold to be sold.—Apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

TO BUILDERS and OTHERS.—LAND TO BE LET on BUILDING LEASES.—Upwards of 3,000 feet frontage, beautifully situate at Penge, within a short distance of three railway stations.—Apply to Mr. LEWIS, Architect, 5, John-street, Adelphi; Mr. RICHARDS, Solicitor, Croydon; or to Mr. GARROOD, Hawthorn grove, Penge Money advanced if required

LAND TO BE LET, in the best part of Chelsea, in large or small plots, equal in all respects to freehold.—Apply for particulars and to see the plans, to Mr. H. M. EYTON, Surveyor, 250, King's-road, Chelsea; or to Mr. GRACE, 57, Oakley-street, Chelsea, S.W.

UPNOR, near ROCHESTER and CHATHAM, KENT—ELIGIBLE INVESTMENT.—TO BE LET, on LEASE, or SOLD, all those very desirable PREMISES, known as the Terra-Cotta Works, Upnor, near Rochester, consisting of tile kilns, an extensive range of sheds, stable, offices, and other buildings, together with three acres of meadow land, containing a very large quantity of pottier's clay. The property is situate immediately opposite the Government works in connexion with Chatham Dockyard, in close proximity to the property of the War Department at Upnor, and has a most convenient frontage to the river Medway, where it will prove a more than ordinary valuable investment. The premises for some years past have been used as a Terra Cotta Manufactory. No objection, however, will be made to their conversion by a tenant to other uses, to be approved of by the owners.—For further particulars, apply to Messrs FESSELL, KNIGHT, & ARNOLD, Solicitors, Rochester, Kent.

PUTNEY.—To BUILDERS and OTHERS. Superior BUILDING LAND TO BE LET, on the Richmond-road, Putney, within 10 years of the termination Lease, 90 years. Ground-rent moderate. Liberal allowances made.—For plan, &c. apply to J. H. ROWLEY, Esq. Architect, 35, Poultry, E.C.

BRICKS for SALE.—About 200,000 RED FACING BRICKS, lying at Grays, Essex.—Apply at the Office of the Grays' Chalk Quarries Company (Limited), 8, Georges-yard, Lombard-street, London, where a sample may be seen.

TO BUILDERS and OTHERS.—Superior RED and STAINED TILES, RED KILN BRICKS, and ORNAMENTAL WARE, in Stock and to Order, at FRIMLIN'S Brick and Tile Factory, Wateringbury, Kent. Can be put into Medway barges, or on the South Eastern Railway.

TO BRICKMAKERS. — All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold.

1st. Nearly all the ordinary burnt stocks, and the yield of inferior bricks is reduced from 25 to about 10 per cent of the total make, which in itself represents a large permanent saving.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank street, Westminster.

SAMPLES of BRICKS, TILES, &c. Made at EAST COWES PARK, Can be seen in the Constructional Department, KENSINGTON MUSEUM. R. LANGLEY, Agent.

NEW STOCK NOW READY. FINE WHITE BRICKS. BEST RED BRICKS.

White, Black, and Red Cutters. Also a large assortment of FANCY MOULDED BRICKS & GARDEN EDGINGS, Plain and Ornamental ROOFING and RIDGE TILES; Delivered to Vessels in the Dock alongside the Kilns, in the River Medina.

Pattern Sheets, and all information, may be had of R. LANGLEY, Agent, East Cowes-park, Isle of Wight.

BRICKS, PANTILES, AND PAVINGS. J. H. ANDREWS, Wisbech, offers

Red Pantiles, at 47s. 6d. per 1,000.
" 8-inch Pavings, 55s. per 1,000.
" Floor Bricks, 40s. per 1,000.
White Kiln ditto, 30s per 1,000.
Ridge Tiles, at 75s. per 1,000.

Cash Prices. Delivered in Trucks in London, or along the Line on the Great Eastern Railway. Quantities may be delivered by Vessel at any of the Thames Wharfs.

2, WINSLEY STREET, OXFORD STREET,
LONDON, W.

THE FURNISHING OF BED-ROOMS.
HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.
Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them right and others not, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own room. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.
Bed Furniture is fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern as set upon it would appear on the Bedstead.
A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.
The Stock of Mahogany Goods for the better Bed rooms, and Japanned Goods for servants' use, is very great and varied. The entire Stock is arranged in eight rooms, six galleries (each 12 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.
Every attention is paid to the manufacture of the Cabinet work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.
Their Bedding trade receives their constant and personal attention, every article being made on the premises.
They particularly call attention to their Patent Spring Mattress, the Sommier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.
HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham-court-road, London.

WHOLESALE TERMS TO THE TRADE.

BATTY & STEVEN,

HEATING AND VENTILATING ENGINEERS,

Undertake the **Heating and Ventilating of Buildings,** Fitting up with Stoves, Cooking and Hot-water Apparatus, Baths, &c.

Curing Smoky Chimneys,—Altering Defective Work (as has been Mr. BATTY'S practice for Fifteen Years).

They invite attention to their NEW STOCK OF STOVES—CLOSE AND OPEN FIRE-COOKING RANGES—HOT WATER AND RAIN-WATER PIPES—STABLE AND GARDEN FURNISHINGS—RAILINGS, &c. and to the following **PATENTED IMPROVEMENTS,** viz.:—

THE VENTILATING FIRE GRATE, admitting into the room fresh air moderately warmed in a chamber at the back. Grates of all qualities can be constructed on this principle.—(*Favourably mentioned at the Meeting, 2nd March,* 1863, *of the Royal Institute of British Architects.*

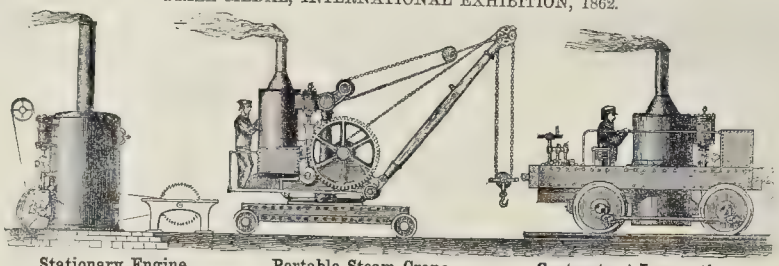
A NEW COOKING RANGE—dispensing with the Close Fire Door, besides having the following advantages:—

1. A strong Roasting Fire,—11-inch Fire, Roasting two joints at a time. Superior Ovens for roasting or baking at pleasure.
2. More perfect combustion,—preventing accumulation of soot,—economising fuel. Also removing the smell of cooking from the kitchen.

PRICE, 36 in. to 39 in. 3*l.* to 4*l.* 10s.; 42 in. to 45 in. 4*l.* to 6*l.*; 48 in. to 54 in. 5*l.* to 8*l.* 10s.; 60 in. to 72 in. 7*l.* to 16*l.*; and upwards.

THE POOR MAN'S COOKING GRATE, having a roasting Fire—a roasting Oven—a Boiler, and Flue for increasing the heat as required, thereby giving results superior to any other Cooking Stove, with a small amount of fuel. PRICE, 30 in. to 42 in. 32s. to 48s.

THE WARM AIR PAGODA STOVE, radiating the currents horizontally (not upwards), Warming Buildings in a superior manner.



A SELF-ACTING VENTILATOR FOR ROOMS—placed between the joists and ceiling—removing the vitiated air.

THE PYRAMID CHIMNEY HEAD, preventing Chimneys from smoking, and down-draughts. PRICE, 12s. 6d. to 20s.

B. & S. will be happy to give information on Ventilation, and the Repairing and Improving of Heating and Cooking Apparatus.

CHAPLIN'S PATENT PORTABLE STEAM ENGINES AND BOILERS.

PRIZE MEDAL, INTERNATIONAL EXHIBITION, 1862.

Stationary Engine. From 1 to 30 Horse Power. **Portable Steam Crane.** 1 to 30 Tons. **Contractors' Locomotive.** 6 to 27 Horse Power.

From the strength, simplicity, and compactness of these Engines, they are now extensively used for general purposes; also in situations where Steam Engines of the ordinary construction cannot be applied.

Stationary Engines,—require no building in, nor chimney stalk, and with our Patent forced combustion apparatus, will burn inferior qualities of coal, wood, or peats. These Engines are specially suited for shipment, and may be packed inside the Boiler to economise freight.

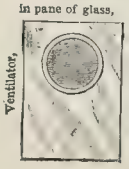
Portable Steam Cranes,—for wharf or railway, with wrought-iron carriages on wheels, link motion, foot brake, &c., all under the easy control of one man; the larger sizes hoist, lower, and turn round in either direction by steam.—*These Cranes were selected by H.M. Commissioners for receiving and sending away the heavy machinery at the International Exhibition of* 1862.

Contractors' Locomotives,—are adapted to work on rails or tramways of a gauge from two feet upwards; they are complete and efficient Locomotives, simple in construction, and the working parts easily got at for repair; they draw heavy loads at reduced speeds. These Engines are usually sent in one package, ready for work on arrival.

LIGHT PORTABLE, HOISTING, WINDING, AND PUMPING ENGINES, &c.

ALEXANDER CHAPLIN & CO. CRANSTONHILL ENGINE WORKS, GLASGOW.

OFFICE, 9, Adam Street, Adelphi, W.C.; LONDON DEPOT and WHARF, Lower Fore Street, Lambeth, S.



Engines of each class KEPT IN STOCK for SALE or HIRE, and all our Manufactures GUARANTEED as to EFFICIENCY, MATERIAL, and WORKMANSHIP.

Parties are cautioned against using or purchasing Imitations or Infringements of these Patent Manufactures.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and re admitted to excel all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England and ; MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for adoption ; y what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices. ured in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure
"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

BROWN & GREEN'S

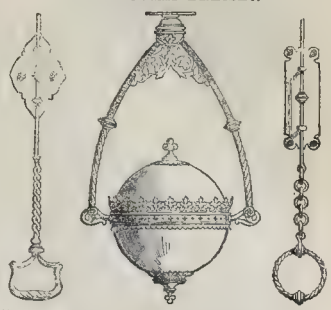
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,



72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

Full sets of Wood-working Machinery to be seen in operation daily at the Works, Rochdale.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,
12, YORK BUILDINGS, ADELPHI.

And are manufactured solely by G. B. KENT & CO. at 11, Great Marlborough-street, London, W.
Established 1777.
KENT'S BRUSHES have been celebrated for their superior quality for the last eighty-six years, and may always be depended upon as the best that can be made.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Boxes, Union joints, Ferules, Bottles, Bowls, Toilet trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

THE LAND SECURITIES COMPANY

(Limited).
Capital, 2,000,000*l.*
DIRECTORS.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Rolls, esq. M.P.
Sir James Ferguson, Bart. M.P.
Col. Fulke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart. M.P.
Sir Lawrence Palk, Bart. M.P.
Sir Henry Stracey, Bart. M.P.
William Dargan, esq.
Henry Farquhar, esq.
Sir John Gray.
John Horatio Lloyd, esq.
Hon. William Napier.
Hon. Henry Petre.
Sir Charles Rich, Bart.
Granville Richard Ryder, esq.
Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Offices, 5, Cheapside (54, Old Broad-street, E.C.), Office of International Financial Society.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security—

1st. Of landed estates, first class house property, and real property of all descriptions, mines, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and hereditaments of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private, Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the negotiation of special investments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

MATHEMATICAL DRAWING INSTRUMENTS, THEODOLITES, LEVELS, CIRCUMFERENTERS, SCALES, TAPES, CHAINS, T SQUARES, RULES, &c.

JOHN ARCHBUTT & SONS,
20, WESTMINSTER BRIDGE ROAD, LAMBETH,
Near Astley's Theatre,

Respectfully inform the public that their Illustrated Price-list will be forwarded free on application. The prices will be found remarkably low. Every article warranted. Second-hand Instruments of all kinds, by the best makers, always in stock.

GOULD & PORTER (late CARY) are now manufacturing their improved 10-inch DUMPY LEVEL, best quality, complete for 9*l.* 10*s.* 0*d.*; with silver ring compass, 10*l.* 10*s.* 0*d.*; 12-inch ditto, ditto, 11*l.* 0*s.* 0*d.* and 13*l.* 13*s.* 0*d.* Best 5-inch THEODOLITES, 22*l.* 0*s.* 0*d.* All other MATHEMATICAL INSTRUMENTS at Revised Prices.—Optical and Mathematical Instrument Makers to the Admiralty, Royal Geographical Society, Royal Military College, Sandhurst, &c. Established upwards of a century.—181, Strand, London.

TO BUILDERS, &c.
A LARGE ASSORTED STOCK always on HAND, of
CLOTHS and BAIZES,
In all widths, colours and qualities, at
HILL & SONS, 33 and 189, St. Martin's-lane, Charing Cross.

VENTILATION—PURE AIR.

for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—RAYWARD, BROTHERS, sole Manufacturers, 187 and 188 (late 117 and 118), Union-street, Borough, London.

TARPAULINS, MARQUEES, &c.

for SALE or HIRE.

The Builder.

VOL. XXII.—No. 1118.

The Exhibited Machinery of 1862.*

SEVERAL years are now gone by since Mr. D. K. Clark published his admirable work on Locomotive Machinery. There can be no doubt that this book was the best book ever written on any form of the steam engine. Containing many new views and experiments, filled with very careful descriptions of then existing and still extant machinery, ustrated with a profusion of woodcuts and cellent engravings, and the whole text be-g, as it were, threaded on a careful and minous style, this work may be said to have rmed an era in the development of the loco-otive, and to have been a benefit to the ofession. It is true that nothing is more volutionary than science, and more especially echanical science,—like the Time of mythology, e progress of one year perennially devours the oducts of the last. Many other engineers ve, doubtless, assimilated much of the results this book, and thus fortified, can carry still rther the development of locomotive machi-ry; but the book itself will always remain an most imperishable monument to Mr. Clark's owledge, talents, and industry. We say most, for it is the fate of scientific works to more or less transitory; and although, to use e words of Laplace, "a system of the uni-rse can only be once discovered," many of the pours of Newton himself have already been perseded. We shall, however, always feel ateful to Mr. Clark for his excellent work on comotive Machinery, and we can never cease feel respect for his abilities. Such success s, however, its own disadvantages. An thor like this raises great expectations when issues a second work under such excellent estige; and he has to in a great measure ame these very expectations if they be not lfilled.

We must confess that his last work has been great disappointment to us. It has disap-inted us in several ways—as to its period of blication, its size, and its matter. In the first ace, as our readers will have seen, we have d long ago occasion to notice several very cellent reports on the Great Exhibition of 62. We have thus long ago had the English, e French, and the Belgian official reports, ithout reckoning the numerous excellent and sultory accounts that have appeared in our ges and in those of our contemporaries. Why, this time, as we know to be the fact in several stances, many of the exhibits are already perseded by improved contrivances. This int, however, may be said to be the business the readers or purchasers, many of whom, r aught we know, might still delight in a full, reful, and correct record, in the English lan-age, of the engineering department of the hibition of 1862. The other point, which ore closely concerns Mr. Clark himself, is the size of the work,—what the French would call its *cadre*. Now, we unhesitatingly say that this is too narrow. We hold it to be impossible to condense a really interesting and valuable account of the engineering exhibits of 1862 in a work of this size. Mr. Clark himself has the same feeling. He says that "with every disposition to compress the matter of the volume within smaller limits, it has, nevertheless, been extended to nearly one-half more than the space originally assigned for it; as it was found that these limits could not be observed without injuriously curtailing the book. In fact, the volume might easily and profitably have been extended to double the size." No doubt it could, but then, *tant pis* for an author who has to make such an avowal. Then comes the question:—Can one man,—even if he be Mr. Clark, and Superintendent of the Western Annex,—write a thorough work on the exhibits of the quondam Western Annex? We should decidedly say, No. Can one man write equally well about railway plant, the rolling stock, and the fixed plant of lines;—on machinery for manufacturing textile fabrics,—spinning and weaving cotton, and flax, and silk, and wool;—machine tools for working in iron, wood, and other materials; machines for working in paper, stone, and clay, sugar and oil, and in flour; and on machines for brewing? There is no engineer living who may be said to be equally competent in all the forms of even the steam-engine alone, in locomotive, and marine and pumping, and stationary engines, and portable work. Hydraulic machinery, again, has several special developments that form separate classes requiring a life-long study; and then an immense variety of unclassed machinery was exhibited, some classes of which were entirely novel, and contained within themselves the germs of new branches of the engineering profession. There can be no doubt that the plan adopted in all the reports on the Exhibition, except Mr. Clark's,—that, namely, of employing, the pens of a number of men of science,—is the only one suited to the encyclopedic character of the task of describing and, if possible, criticising upwards of eleven hundred engines and machines. It is true that writing about an engine or machine is not so difficult as constructing it, but we could scarcely expect that even Mr. Clark, favoured as he was by his official position, would be equal to a work demanding such multifarious experience.

In the arrangement of his book, Mr. Clark has generally followed the classification adopted in the official catalogue. The first part of this volume is on railway plant; the second on the manufacture of textile fabrics; the third treats on machine tools; and the last on machinery in general. The work contains some 431 wood engravings,—nearly the same in number as the letter-press pages. Many of the wood-cuts have appeared before in different works, but this cannot be said against the thirty-nine excellent lithographs; and among these we may direct attention to a series of six, showing the dry clay brick-making machines of Messrs. Platt, Brothers, & Co., of Oldham.

The plan carried out by Mr. Clark in this work has been to treat fully and critically on the departments in which he has a thorough experience, and to confine himself to somewhat meagre descriptions of the exhibits out of his special scope. The accounts of the railway plant and of the steam-engines are thus very valuable, and almost unique; but, except in two other particular cases that appear to concern himself personally, Mr. Clark keeps in the main to the *rôle* of description only. The most important improvement in permanent way is clearly the application of steel rails. Mr. Clark does not so strictly confine himself to the Western Annex, but that he might have alluded to the Bessemer steel rails. Mr. Bessemer sent a rail 40 feet long, rolled at Crewe. There was one sample that had been twisted cold like a ribbon, under the steam-hammer, and during a severe frost. According to an account now before us, the London and North-Western Railway have manufactured at their works at Crewe, less than six months ago, upwards of 1,200 of Bessemer rails, and the quantity of cross ends amounted to 97 tons. The engineers of that line have put down the steel rail exhibited in 1862, and expect to be able to send it to an eventual exhibition of 1872. We also miss an account of some samples of steel-topped rails exhibited by M. Verdié, of Firminy, in France. In the Austrian department, again, an excellent sample of a chilled crossing, similar to that of Mr. Biddell, of Ipswich, was exhibited by Ganz & Co., of Ofen; but Mr. Clark has not noticed this exhibit. There is a very complete and correct account of the wood-working machinery; but with the more progressive makers, such as Messrs. Worssam & Co., of Chelsea, many of these machines have been already altered in detail from those exhibited in 1862. Mr. Clark, in alluding to Perin's band-saws, states that "their introduction into general use in England is due to General Tulloch, lately director of the Royal Carriage Department, at Woolwich Arsenal," who saw it at work at the Paris Exhibition of 1855. "The example set at Woolwich was quickly followed at other wood-working establishments in various parts of the country, and hundreds of band-saws were quickly at work." The admirable machines of Messrs. Worssam are very carefully described; and this is also more or less the case with those of Messrs. Powis & James, of Messrs. Thomas Robinson & Sons, and Greenwood & Batley, and others. Most mechanics will have a very distinct impression of Messrs. Greenwood & Batley's stand, which formed a perfect "carnival" of ingenuity, kept within due bounds by admirable workmanship and design. Mr. Clark concludes a notice of these machines of such value to the builder, by remarking that the style of wood-working machinery is being assimilated to that of the best machine-tools; the frames are massed into the simplest forms, and the fewest number of pieces, while each machine is placed on a strong bed-plate. "The sooner that the common architectural abortions in cast-iron are abandoned, the better it will be for the founder and for the machine. The hollow or box system of framing now successfully practised by the machine-tool makers might be with benefit introduced in various ways in wood-working machinery." The wet or plastic clay machines—in which the clay is forced through a die, consolidating it and shaping it during the passage — of Messrs. Clayton & Co., P. Effertz, Page & Co., and Sharp & Bulmer, are carefully described. This is also the case with the dry-clay or compression machines,—in which the clay is formed in moulds,—of Wilson, of Glasgow; Bradley & Craven; and Platt, Brothers, & Co. These last are very completely illustrated. There can be no doubt but that the wet-clay machines, working by compression, are as yet the most successful; and we have seen the machines of Clayton & Co., in particular, in successful working trim in several distant parts of Europe.

In the account of the ice-making machines of M. Carré, Mr. Clark has omitted to notice the dioptric water-gauge glass used on these machines, and also beginning to be applied to steam boilers. The glass is protected from breakage by means of a brass casing; this casing is furnished with sets of holes opposite each other, and the difference of refraction between the water and the glass causes the circular holes in the level of the water to appear as an ellipse with its major axis in the same line with the vertical axis of the tube. The glass is thus protected, and its indications are clearer.

* "The Exhibited Machinery of 1862: a Cyclopædia of the Machinery represented at the International Exhibition." By D. K. Clark, C.E., M. Inst. C.E.; late Superintendent of the Western Annex, International Exhibition, 1862; Author of "Railway Machinery," &c. Day & Son. London, 1864.

As we have stated, the notice on the steam engines exhibited is very interesting and valuable. This portion is supplemented by a lengthy note referring to a contestation about the scientific priority between Mr. Clark himself and Mr. Z. Colburn, as to the origination of a new explanation of boiler explosions. The explanation is of great interest, and its more extensive propagation would probably result in the saving of many lives and of much property.* It is not, perhaps, so generally known as it ought to be, that at least 100 lives and many thousands' worth of property are annually lost in England alone through boiler explosions. The theory is here neatly stated as follows: "Explosions are probably in many cases preceded by ruptures. Circumstances determine whether a rupture shall be followed by an explosion. Perhaps the occurrence of an explosion, in ordinary cases, mainly depends upon the locality of the rupture under water or above water. If under water, water only is expelled, causing very little enlargement of volume, reduction of pressure, or internal commotion, and therefore unlikely to incur explosion. If, on the contrary, the rupture takes place above water, steam issues with the enormous velocity due greatly to its comparative lightness and its tension, 1,800 to 2,000 feet per second, which, of course, would cause the evacuation of the steam-room of an ordinary boiler instantaneously through a very small opening, and therefore an instant fall of pressure, and an instant generation of steam, and the projection of water and steam at the rate of many hundred feet per second within the boiler." Mr. Clark then hastens to state that "this new theory of the violence of boiler explosions, which may be called the "projectile theory," was first broached by the author in 1859, and published by him in the *Mechanics' Magazine* for February 10, 1860. Now it really would be a matter of serene indifference to us who first broached the new explanation, but having carefully examined the question, we feel bound to state that Mr. Clark is, mildly speaking, quite mistaken in his assumption. Any question of priority of discovery is simply and purely a question of priority of publication. Starting from this universally received test—acknowledged as the only one by the scientific men of all nations ever since there was such a thing as science—the question is very simple. On the one hand is the little note of a few lines of Mr. Clark; on the other an elaborate pamphlet by Mr. Colburn.† The first was published in February; its only idea is an assimilation of the explosion of a boiler to that of, say, a loaded mortar filled with small shot—the particles of water taking the function of the bullets. This idea, whether it be right or wrong, is a mere fraction in the explanation published in March by Mr. Colburn in his pamphlet. We have thus Mr. Clark's small note in one scale of the balance, and Mr. Z. Colburn's book in the other. Any one who chooses can read Mr. Colburn's pamphlet for himself, and whatever he may otherwise think of the controversy, he can scarcely come to any other conclusion than that Mr. Colburn has received very considerable provocation.

In the midst of the article on hydraulic machinery is inserted another long note, as full of explosive materials as any gun-cartridge. The question is again a point of dispute between Messrs. Clark and Colburn, but it is this time on the relative efficiency of the centrifugal pumps of Messrs. Appold and Messrs. Gwynne respectively. To enter in the least into the question would, amongst other little things, require from us an examination into the best means generally of taking the useful effect of hydraulic apparatus,—would demand an essay on indicating engines,—a choice by ourselves of one amongst the multitudinous formulæ for calculating the flow of water over weirs,—and, let us add, as a winding up, a little discussion on the *genus irritabile vatum*. Mr. Clark found that the useful work done by Appold's pump was 73·71 per cent. of the indicator power exerted by the engine, and that of Messrs. Gwynne's pump to be only 56½ per cent. of the indicator horse power. Mr. Colburn found that Appold's pump gave 67·68 per cent. of useful effect, while that of Messrs. Gwynne gave no less than 83·18 per cent. M. Tresca and General Morin, on the other hand, found that "the pump with curved vanes of Mr. Appold, when it is submerged in the lower tank, and is driven at the proper speed due to the height of ascension of the water, gives a useful effect of from 0·65 to 0·70 per cent. of the motive power." Eleven experiments, made in 1859, by the same distinguished experimentalists, on a pump of Messrs. Gwynne, gave an average of useful effect of 0·337 of the motive power. All these results are discordant enough, and when our space allows, we may return to the subject.

In an account of Herr Krupp of Essen's remarkable stand, Mr. Clark mentions that "M. Krupp is erecting large rolling-mills for making cast-steel plates and rails, with a steam-engine of 2,000 horse-power. He hopes to roll plates sufficiently large to form locomotive boilers from a single sheet of metal, with a single row of rivets, with roll of 15 feet in length; also armour-plates 1 foot thick."

It would be an immense benefit to the occupiers of small workshops if our gas and water mains could be utilized, not merely as sources of light and water supply, but also as supplies of motive power. The solution of the mechanical problem of cheaply delivering one or two or three horse power to small workshop engines may be said to almost possess a domestic interest. It is stated that Mr. Schiele, of Manchester, has succeeded in making a very small and compact high-pressure turbine, for such household purposes as, for instance, blowing organs. It was hoped that the air or caloric engines, several of which were exhibited, could be applied in this way. Up to the present, these engines do not seem to have made much progress in England, but appear more successful abroad. Ericsson of New York, Neill of London, Dennison of Rhode Island, U.S., and Schwarzkopff of Berlin, each sent an engine of this kind. It appears that the Reading Iron-works Company are now making some of Lenoir's gas-engines, one of which was exhibited in the French department of the Annex. Its appearance was that of a horizontal steam-engine with two slide valve boxes. The gas and air were exploded at each end of the cylinder by means of the electric spark from a Ruhenkorff coil. Lenoir's engine is stated to consume 90 cubic feet of gas per horse-power per hour. Another gas-engine, exhibited by Mr. C. W. Siemens, would probably consume much less gas, from being provided with a regenerator. There can be no doubt that the manufacturer who can put an engine in the market, suitable for cases where, say, a couple of horse-power are required—at intervals, and in situations where steam and its pressure are inapplicable—would meet with a great demand. Perhaps electro-magnetism may yet solve the problem. Amongst the crane-work, Mr. Clark directs attention to a ship's engines, exhibited by Chaplin & Co., and provided with apparatus for winding, cooking, and distilling, in combination—and a very curious combination indeed. The great merit of this work is its being probably the most correct and compact list of the exhibits in the Western Annex of 1862, and there can be no doubt that it will be useful as a work of reference to engineers, and to the former exhibitors.

* We have lately used this explanation in the course of an account of the explosion of an engine on the Metropolitan Railway.

† "Steam Boiler Explosions." By Zerah Colburn. London: John Weale. 1860.

GLASS PAINTING, ANCIENT AND MODERN.*

A PRUDENT device is very commonly practised by writers of modern history,—stopping short at the chapter in which their own contemporaries would come upon the scene. I must beg to be allowed to hedge myself within the borders of a similar prudence. I have been asked to give a critical lecture on the exhibition which is now open within these walls; but it would be so very much like having gentlemen glass-painters up one by one to say their catechisms, or to answer to the charges brought against them, that I could not be guilty either of such impertinence or such presumption on the part of an amateur. I must, therefore, content myself, and you, if possible, by a general review of the past and present of the art of the glass-painter.

We appear to be at the beginning of a great revival of this art. The demand for painted windows is enough to satisfy the most commercial manufacturers of them, and to drive into a fever those few *real artists* (and to their honour, be it said, that there are such) who have devoted their talents to this beautiful form of art. This demand is made by people of all ranks, and for every conceivable purpose. Its application, too, is as various as good or bad taste can suggest, from the windows recalling the deeds of charity of saints and martyrs, *fit* memorials to the good and benevolent of our own days, down to the *unfit and unseemly* use of a fine Early English window in one of the stateliest abbeys in England, filled with the most elaborate thirteenth century ornamentation, as a framework to nineteenth century medallions of railway trains and railway bridges, &c., &c., and a perfect galaxy of life-size portraits of great engineers, Sir Christopher Wren, Telford, Stephenson, and others, in no way to the honour of God or reverence for the associations of the place, but to the honour and glory of the march of modern intellect.

This demand for painted glass amounts at present to a sort of public passion. There is, unhappily, very little method in this madness. Glass is wanted, and glass is supplied; but the buyer has very little judgment, the producer very little money: so the balance is rapidly struck between them, though, perhaps, not always so rapidly settled. Time, too, is made an element in the bargain; and the work which professes to be one of fine art is valued less by its merit than by its measurement. Such has been the indiscriminate demand and supply of this beautiful material up to the present time; but the more cultivated taste and knowledge of our day is, however, beginning to act upon it. People are beginning to recognise the fact that the eye must be educated to judge of beauty, as much as the mind to appreciate its excellence; that individual *fancy* is *not* the test of art; that genius in the artist, no less than judgment in his critic, can only be perfected by care, by study, and by work.

It was but half a century ago that painted glass seemed to have been consigned to the tender mercies of respectable plumbers! Church architecture had reached that pure and perfect chastity which ignores all ornament. The windows, which were the eyes of the buildings, were just allowed a line of label over them by way of architectural eyebrows. Those windows admitted the light of heaven, to the satisfaction of the blindest inhabitant, and to agony of all the rest. If the respectable plumber who had supplied the glass had happened to be of an imaginative turn of mind, he would probably have fringed his work with a border of pale lilac-coloured quarries, alternating with equally pale orange, with all the severe purity of that classical age. There was little edification to be got out of them, but some amusement. The landscape was clearly seen through them, and at moments of wandering thoughts, the congregation occupied themselves with lilac, oak trees, and orange elms. The storied pane and dim religious light existed in poetry alone, and not in churches. But, indeed, there was a very dim religious light everywhere at that time; and as for storied panes, the Puritans had taken them to destroy all that they could reach of what was worth seeing or having in the material fabric of the church. The troubles on the Continent at the beginning of this century were the cause of many works of various arts being brought into England. The feeling of the time was little in harmony with matters of that kind. A few

* By Mr. T. Gambier Parry. Read at the South Kensington Museum, on Monday, July 4th.

mateurs collected what was brought to England, nd became the centres of little coteries, where rt subjects made the bond of union. The ainted glass which, with many other things, ecame the objects of a novel interest, was prinipally of a late style. Its gemlike beauty and old design gave the cue to those who had a eart to get the materials. The only glass to be ot was that violet and yellow stuff at the lumber's, some ruby glass very like sealing-wax, nd some very deep blue, principally used for he old fashioned finger-glasses on dessert-tables, ll equally hopeless and impossible for any art urposes. However, a beginning was made with hese. The grandly coloured bits of old picture lass which had been brought from the Conti- ent were very much to the revivers of the art what Sir J. Reynolds's lectures were to the tudents of the Academy. The effects of a full- blown art were put before their eyes, but the essons of first schooling were not to be got from hem. They were put to mathematics before hey had begun arithmetic.

The art deducible from those late specimens was a kind of liberty-of-conscience art. There was no principle whatever to be got out of them. The wretched glass-painters of those days began o find that it was a worthless liberty to do merely what was right in their own eyes. The public was beginning to open theirs—uninstructed eyes they were; but here and there over the country, in byways and outlying village churches, where the sacrilegious hand of the fanatic had not found its way, and in some more important buildings,—cathedrals, abbeys, where the very quantity of beautiful works had tired out the hand of the destroyer;—in such places and by such occasions as these, there was just enough left here and there about the country to leave an effect upon people's eyes, which they used in destructive comparison with the weak and washy productions of their own time. Up to those days there had been for long time past a perfect stagnation of public taste. As for drawing and knowledge of the human figure, people had even lost the knowledge of their own drawing; and ladies tied their waists where no waists ever were created; and gentlemen, blind to what good points they possessed, powdered their hair, and loaded their throats with yards of cloth, and finished themselves off behind and below with tails and continuations of the most unnatural construction. Those were the halcyon days of glorious independence of all taste. But what was to be done? Painted windows were to be produced. How? Things were growing serious. There was nothing to be got out of the external appearance of the men and women of the period, and the grand old bits of foreign glass and of what still remained in England could not be followed, because the materials used in one could not be got for money, and the technical refinement of the other had long ago been forgotten.

But there was a decided stir beginning in that great stagnation. The art of painting glass had never entirely died out. A few men, unknown to fame, but in whom the fire of the old arts still smouldered, had persisted in making scraps of fine coloured glass for their own use; but the only art for them to follow, which the public was then admiring, was of the late Flemish and northern schools, and could give them no good grounding in their art, such as the glass in King's College Chapel, Cambridge, which is a grand specimen of the art at a stage in its overgrown development that could offer him no model to begin from; and such, too, as the glass in Fairford Church, in Gloucestershire, which is magnificent in the sensuous element of colours, but coarse and vulgar in the extreme in the higher artistic qualities of drawing and composition.

The early glass-painters of our days had small chance. They were themselves untutored in art. They were anxious to gain the public favour. The public—that bugbear of all genius—was the son of the public of the eighteenth century, and the grandson of the public of the seventeenth century,—a vigorous public, but born of a stolid parentage, with material tastes and blunt manners, and little or no time or care for the finer arts of peace. Early in this century the world was in a perfect turmoil all round the equator. A few quiet spirits, finer than the rest, were the sparks which wandered about the dying embers of our national arts. Architecture, that centre and nucleus of them all, was in abeyance. Birmingham was in the ascendant. To judge from the decorative works of that day, the ideal of beauty must have been an egg. Everything was either ovate or oval. Nothing was tolerated but what savoured of Greece or Rome, or eggs. All responsibility for beauty was thrown upon the shoulders of the Classics; and they were very broad, for classical designs were mainly a matter of measurement. There needed to be no invention with them, because all their proportions were fixed by rule. Exceedingly beautiful those proportions were—most pure and refined. The result of those rules had been devised by men of wondrous genius in ages long gone by, and under a climate and circumstances the perfect opposite of our own. Our people felt safe in copying them with the utmost complacency. But people are troubled with hearts as well as eyes. They soon began to feel the dreariness of an art which had been thrust upon them, foreign in its origin, foreign in its character, and foreign both in place and purpose to which it had been brought. They were bound to admire it, but they could not care for it. There was nothing in a Greek temple that could meet the requirements of a northern people. True Classic art is most beautiful; but there is some other quality required in art besides that. Our people became conscious of that want. All that was thrust upon them at every corner neither attracted their sense nor engaged their sympathy. It might be unanswerably correct, but was most desperately uninteresting. There was *nothing of home* in it. Do what they might with it, let the basement be of British granite, the superstructure of British marble, the carving of British stone, the beams of British oak; nothing to bring it to a British heart. It might command intellectual love; heart love—none.

With peace restored at home, and leisure to return to the arts of peace, the relics of old days and old things at home, of home history, home romance, home devotion, soon began to touch people to the quick, and to engage a warmth of cordial affection which all the elevations from Athens and the copies from Spalato and Corinth could never command.

Among the relics of our national arts none engaged a more general attention than those associated with our national architecture, and pre-eminently that of painted glass. It was valuable for its heraldry, its costume, its legends; but some loved it for its beauty, and caught the first glimpse of the refinement of its art, which for centuries had shared in the contempt of all things Gothic.

People had been taught to look at everything through Palladian spectacles. All avenues to really national taste had long been closed. This country had been overwhelmed by three centuries of invasions,—religious invasion of the old form of faith; democratic invasion of the old forms of Government; invasion of Dutch arts and notions, with a Dutch king and Dutch nobility; union with Scotland, royalty from Hanover, and all the foreign influence which refugees for religion, refugees for politics, and all that the novel interests of our growing foreign connexionships, commerce, colonies, and conquests could produce on the manners and habits of our people;—till we had well nigh lost the recollections of our old nationality, and worked at things with new notions, and looked at them with new eyes.

This was the spirit in which the nineteenth century began. But things began to settle down. People began to yearn for something of their own. The old national arts were revived with all the interest of novelty. Their very principles had been forgotten. Italian fiddlers, French cooks, Flemish painters, and Dutch architects, had put out all memory of them. But they were to live and flourish again. We are to-day engaged upon one of them. The first glass-painters of this modern Renaissance were unhappily no artists. They floundered about in a perfect mosaic of difficulties. They were staggered by multiplicity of styles; they had no good art in themselves, no good materials in their workshops. There seemed to be no standard of excellence: there was no standard of public taste. The contrast between the vigour of the old work and the poverty of the new grew more and more painful; the old savoured of art, the new only savoured of the shop. The glass was thin, the colour poor. Smearing it, varnishing it, would not make it deep and rich; it only made it bilious. What was to be done? To imitate? Yes, to imitate,—and to the necessity which drove them to it will be hereafter traced the cause of the pre-eminence which I firmly believe our artists will attain. Imitation the most laborious is the very foundation for all hope of ultimate success in the education of all art. The processes, the theory, the *rationale* of art need to be analyzed before the mind can digest them. Imitation is *not* base, except in this, that it is the *very* base of all success. The most heaven-born genius must first have learnt to spell. England did not stand alone in difficulty. In Germany the art was taken up with spirit; but the old examples were too soon cast aside. The reasons of their beauty, the nature of their materials, the very alphabet of the future language was neglected. Their only real success has been in an art unsuited to the large scale of windows, in the beautiful cabinet examples of enamel-painted glass, principally of copies of old pictures of their own school. Their merit is in technical dexterity, no more. For the high purposes of an independent art such works are but hindrances, influential only for bad. I know nothing more futile, more unhappy, in matters of taste, than the attempts to mimic the productions of one art by the processes of another. The attempt to reproduce in glass the works of the oil or fresco painter might be made in a modest admiration of the great works of other men; but, as such, could only be allowed as an honourable plea in the pursuits to which an amateur might consecrate his intellectual leisure—but no further. Glass-painting is no mere supplement to any other art. It has an individuality all its own, it will stand or fall on its own merits, and for them it need not fear. The Germans have been among its most unfaithful followers. In other styles of art, their painters are not strong colourists. It is strange that this should be so, for as a nation they are the greatest of musicians, and music is essentially the art of colour; but their painters, with rare exception, do not share in this great gift. It was, therefore, not unnatural that in an art of which colour is the great characteristic, they should fail to seize the true ideal: they failed even to perceive the true properties of their material. Regardless of the principles of old art, on which the whole excellence of their masterpieces depends, they formed a dull ideal of their own,—they went to work on glass as if it were canvas,—they worked as if they were afraid of it: they coated it with enamel, they did all that was possible to get rid of it, they reduced it to the condition of transparent calico, and then painted upon it, but with the veriest abuse of glass. Brilliant glancing jewelry of glass, such as in the days of Gothic art filled their cathedral windows with a glory as yet unrivalled, and in those wondrous days of Italy, now 300 years ago, blazed and sparkled with a reckless brilliancy,—with such as this, this genuine use of glass, our modern Germans have no sympathy,—at least, if we are to judge them by their works.

It is hard and thankless work to try to make people see what they cannot see. In matters of this kind they are in general satisfied if only they find things what Irish people call "pretty." There is little or no perception of aptitude and inaptitude in works of art. If glass be made to look like calico, or calico made to look like glass, who cares?

In modern Italian glass there is very much the same error. But then the Italian is essentially a colourist. In glass, however, he, like the German, has begun at the wrong end. The Italians never had much sympathy with northern art. They rather affected to despise their Gothic neighbours; they ignored those schools of art which had covered walls with paintings and windows with storied glass, schools marked with all the individuality of national character well nigh a hundred years before Giotto dipped his first brush in colour. And now, too, in their attempt to revive glass-painting, they ignore those schools again from which the first lessons of true art in glass can best be learnt. They have missed, too, those identical principles even when displayed in their own glorious Cinquecento windows, the principles of translucent colour. They have rather gone in for a style of art more suited to paper than to glass. They have produced some designs tempered with great refinement, and they have transferred these designs to glass. But why to glass? Why to great sheets of fragile glass, toned down with dense enamel, worked and laboured at till all glass was lost sight of, changed, got rid of, treated just as oiled cardboard might have been treated, and with precisely the same result? Again, we look in vain for the glancing jewelry of glass: instead of it we find pictures which, in treatment, texture, and effect, resemble precisely large coloured lithographs varnished into transparency labour misapplied and misplaced—one, indeed, in which I admire the frequent

beauty and merit of design, and delicate execution; but it is not the art of glass. Refinement and tenderness are merits indeed; but they become morbid and vicious when they occupy exclusively the heart and hand of an artist, leaving no room for other qualities, such as vigour and decision, which, even by mere contrast, would have added to their charms. Why are the glories of old glass at Florence and Venice, at Chartres and Bourges, passed by, rich as they are with every lesson which a glass-painter need learn, examples which illustrate the entire powers of the art, and its scale complete from gorgeousness to solemnity? Let those old works be equalled first before they are improved upon.

In France and in Belgium the revival of this art has been carried on in much the same feeling as in England. The principle that has appeared to be a guide to the best men in these countries has been to keep one hand stretched out behind with firm grasp upon the past while the other was stretched out toward the future. They took no heed of the taunts about copying,—they knew that they were but working out great secrets of past excellence for the ground-work of their own. There has been, indeed, a most mean and miserable copyism carried on by men who could do no better, and through their ill doing the reproach has been misapplied to all. But better men knew all the while what they were about,—they knew well what was good, what bad, in the works they studied, what was the matrix, what was the gem. If in the Gothic art of France and England figures were painted in ignorance of anatomy, and architecture in ignorance of perspective, what matter? You might as well look for "photography" in a Johnson's Dictionary as for the rules of the Academy in a Gothic window. No, the grand old fellows of those times did their best. They felt with poetry, and they worked with earnestness; but, what is more to our purpose now, they had a most thorough knowledge of the use of glass,—that is the lesson we have to learn from them. We may draw better; our technicality and science may be greater. How could it be otherwise, when each generation does but light its lamp from the one that has gone before? But they unluckily let the lamp of glass go out. So we, to light our own, must reach still farther back to the old lamp of our forefathers, which is bright and glowing still.

The revival of this art on such right principle as this gives, not hopes only, but confidence in ultimate success. One may grieve at the atrocities which have filled cathedral and other windows with disgrace; but there have been some grand things done. Nothing but a sense that it would be invidious prevents me from naming them.

If there has been one fault more prominent than another, it has been that both the artists and the public have thought too much about the painting, too little about the glass. And the result has been in too many cases that glass-painters have consecrated works to the genius of the arts which ought rather to have been consigned to the simpler genius of the pestle and mortar.

Of the early history of the art very little is known. There appears no reason for supposing that coloured glass was used in windows before the Christian era. The early Egyptian and Greek coloured glass, so far as we can acquaint ourselves, was but semi-transparent, commonly used for coating earthenware and in making small ornamental vessels. Somebody has lately taken out in England a patent for glass coffins. He must have a very high opinion of his friends. The Egyptians had already made glass coffins between 200 and 300 B.C. There are some in the British Museum. There were very few colours made in glass in those times, but a good many varieties of their tints. A good red is not to be found. There are tints of deep and pale blue, ochre and straw colour, browns and greens. About Greek glass windows before our era little or nothing is known; what is described has no analogy to our system of flat sheets set in frames. That glass was used in windows at about the beginning of our era, we know from Pompeii. But we have no trace of coloured glass used for the purpose. This is all the more strange, because of Pliny's expression about glass, that "*avida est materia siquidem ad picturæ accommodatior*" (Nat. Hist. lib. xxxvi. § 67), which sounds like a reference to pictures on glass. I conceive that in reality it refers only to what we find in the bottles and vases of glass of his time, namely, the use of many coloured pieces twisted or drawn out, and worked into all kinds of forms by means of their extreme ductility. Many materials are described as used in Roman windows, such as talc and alabaster, as well as glass. The Japanese used the same expedients, and in addition to them large transparent shells. St. Wilfrid of York describes church windows in his time (seventh century) as filled with transparent stones. The rareness of glass in windows would be inferred from the very few notices of it by two such writers as Philo and Lactantius, who refer so intimately to the habits and usages of their times.

The earliest pictorial use of coloured glass was in the tesseræ of the mosaics; and it is by no means improbable that glass-coated materials, and glass itself, in flat sheets, were used in the polychrome decoration of walls. The earliest examples of any designs on perfectly transparent glass that I can find are those of figures of the Early Byzantine school, made in gold coated upon glass.

There appears no good reason to believe, as is common by writers of the history of the art, that the great church of St. Sophia, of the sixth century, in Constantinople, had coloured glass in its windows. Procopius's description, from which it has been rather wilfully deduced that they were so, would rather lead to the opposite conclusion. He says that "such was the amount of light poured into the temple, that the light of day itself seemed to take its very origin within it;" the pith of the text being in the words "*tanta est effusæ lucis copia*,"—words which he would hardly have applied to the mellowing, modifying influence of the coloured glass of that period. But a contemporary writer seems to explain this magnificent effect by saying that "the walls sparkled with golden vitreous tesseræ,"—"*tesselis vitreis inauratis fulgent*,"—than which it would be impossible to conceive a more gorgeous effect.

That the glass early used in windows was of a soft refractive kind, rather than perfectly imperceptible, as our transparent glass is, may be inferred from Procopius's description, "*vitreis ocellata fenestris vaga lux loquacaria sine sole micat.*" But the way was being fast prepared for coloured glass in windows. The use of tesseræ in mosaics on walls and floors was the natural suggestion for a similar use of coloured glass in windows, from the first moment that a perfectly translucent quality of it was made. Figure subjects had been common in mosaics, why not, then, in coloured window glass? Thus it may naturally have begun; but the earliest positive information I can find of coloured glass being used in windows is of Prudentius's notice of it in the basilica of St. Paul, at Rome, in the fourth century. We next hear of it at a church at Lyons, in the fifth century, and that the coloured glass there was arranged in patterns. The next in point of time distinctly spoken of are the windows of St. Fortunat, Bishop of Poictiers, in the sixth century; and, in the same century, the introduction of it in a church at Tours by St. Gregory; so that, by that time, the use of it had spread commonly, and to a great distance. But in England we had not been so fortunate. St. Wilfred, in the seventh century, laments that makers of coloured glass were not then found in England, so he went to France in search of them. In the next century, the eighth, we find Pope Leo III. filling the apse windows of the Lateran church with coloured glass, in the year 795 ("*Fenestras de apsidâ in vitro diversis coloribus conclusit.*"—Anastasius, History of Leo III.); but up to this time we hear nothing definitely of painting upon glass.

After all the pains which antiquarians have bestowed on the research, it does not appear that any account of figure subjects can be traced with any reliable authority earlier than the middle of the eleventh century, and the example cited is the subject of the "Mystery of St. Paschasius," in a window of a church at Dijon, mentioned by the historian of the monastery of St. Benigne, A.D. 1052. The French king Charles le Chauve was the first great patron of glass-painters. Soon after his time the art became universal. The treatise of Theophilus, of about that period, describes almost every process necessary for a complete window, with the whole detail of its design, and colouring of patterns, figures, and draperies, so that it is impossible not to infer that an art so complete as he describes it must, to have attained such completeness, have been practised long before, although we may find no written account of it, and all that actually remains to us is in pieces coloured separately and inlaid, as in vitreous enamels, mosaics, and incrusted ornaments, or bits of glass, in imitation of gems on bookbinding, church vessels, rings and so forth. At about this time glass-painting became a very distinguished profession. It was honoured by privileges and dignities at Venice and in Normandy by the semi-noble distinction of a title, that of "Gentlemen Glaziers." In those "dark ages," those benighted Gothic times when Christian art first sprang forth in all its freshness and beauty, schools of art were founded in religious establishments; and the artists of those times, trained in the whole range of education then open to them, appear to have practised all the arts of design connected with architecture,—that wall-painting, designs for sculpture, illumination, and glass were followed equally by the same persons—rather a broad hint to those modern "gentlemen glaziers" who go on turning out painted windows, and do not appear to possess so much knowledge of drawing, nor of the principle of ornamentation, as many a poor mechanic who has been for a couple of years a pupil in a good Government school of design.*

THE HOUSE OF COMMONS AND THE DISPUTED THAMES EMBANKMENT CONTRACT.

IN the committee of the House of Commons appointed to inquire into the best means of disposing of the metropolitan sewage, the question of the contracts recently arose.

The first witness called was Mr. Ridley, who complained that, while the Metropolitan Board of Works invited tenders for the execution of that work under certain conditions, those whose tenders had been ultimately accepted were allowed to go on with the work in opposition to the terms of it. By the terms of the contract it was required to fill up the space behind the embankment with Thames gravel; but in the face of this agreement common rubbish and rubble had been used; and, instead of paying for Thames sand, the contractor had actually received 9d. or 6d. per load from persons who wanted to shoot their rubbish on the embankment works. When witness sent in his tender for the embankment works it was at first accepted; but afterwards, on some question being raised as to the sufficiency of his sureties for the due execution of the works, he offered to place the full amount in cash at once in the hands of the bankers.

Mr. Roche, member of the Metropolitan Board of Works, was examined; and he said Mr. Ridley's tender was accepted, and the Board were satisfied with it until they received the report of Mr. Bazalgette, who stated that he would not be responsible for these works being properly carried out if Mr. Ridley were the contractor. Messrs. Bakers' was the second lowest tender to Mr. Ridley; but they required in their contract that an arbitration clause should be inserted; and the Board were of opinion that this would give Messrs. Baker an unfair advantage over other contractors. The Board did not think it wise to re-advertise, because, as the engineer's estimate had become known, they would have had to receive much higher tenders than those which had been sent in in ignorance of the engineer's estimate. It is usual in contracts made by the War Office to have inserted an arbitration clause, and many contractors refuse to accept a tender unless the arbitration clause be inserted in the contract. The absence of an arbitration clause tended to raise the price of the work, as it placed absolute power in the hands of the engineer, and he was the sole arbitrator as to the way in which the work should be done. Architects generally considered it right and proper that an arbitration clause should be inserted in all contracts, and he was not aware that engineers universally were opposed to it. The want of an arbitration clause diminishes the number of persons applying; for instance, Messrs. Baker and Messrs. Lawrence will not send in tenders unless there is an arbitration clause in the contract. The engineer of the Board did not agree to a limited arbitration clause, that was in respect to extras. Had the Board rejected all the tenders and advertised for fresh ones, inserting the arbitration clause, he believed that a tender would have been sent in of a lower amount than that of Mr. Furness, which was accepted. He believed the refusal of Mr. Ridley's tender was detrimental to the interests of the ratepayers.

Mr. Nicholay, another member of the Metro-

* To be continued.

politan Board of Works, said he believed the rejection of Mr. Ridley's tender was unfair to that contractor and injurious to the interests of the ratepayers. Why that tender was not accepted was a problem yet remaining to be solved. The tender was not accepted by a majority of the members. The Board had a professional adviser (their engineer), and they were guided by his opinion. It was his impression that Mr. Ridley's tender was rejected in consequence of Mr. Bazalgette's representation. It was not at that time known that Mr. Bazalgette was to receive 11,000*l.* in respect to Mr. Furness's Odessa contract. He refused to sign the report of the committee of the Board acquitting Mr. Bazalgette; and he said he would rather have his right hand cut off than sign it. As regarded the Odessa contract he believed the ratepayers would be delighted if the subject were inquired into by some impartial tribunal. He thought the arbitration clause ought to be introduced, for without it, if the engineer chose, he might ruin any contractor. The absence of the arbitration clause shut out some of the most eminent contractors in London. He had not heard before that Mr. Furness, instead of filling up behind the embankment with sand, was allowing rubble and rubbish to be shot there, for which he received 6d. and 9d. a load. The engineer had never reported on this to the Board. He believed the object of requiring the use of Thames gravel was to deepen the river, as well as to put a solid material behind the embankment.

Mr. Bazalgette was called, and wished to enter into some explanations, upon which the chairman ordered the room to be cleared; and, on the re-admission of the public, he said that Mr. Bazalgette would be at liberty to put in any statement in writing on a future occasion.

On Monday, Mr. John Thwaites was examined on the same points. It does not seem clear to us that the committee are not going out of their province.

THE GRAVE OF THE LATE SIR CHARLES BARRY, ARCHITECT.

A MEMORIAL brass has recently been placed in the nave of Westminster Abbey, by the family of the late Sir Charles Barry, over the position of his coffin, and close to the grave of the late Robert Stephenson. It has been made by Messrs. Hardman, and consists of a large floriated cross let into a slab of black marble, about 12 feet by 5 feet, with an inscription round the outside of the slab and at the foot of the cross. Two tablets are introduced into the design, one giving the elevation of the Victoria Tower, and the other a plan of the New Palace at Westminster.

The inscription at the foot of the cross is as follows:—"Sacred to the memory of Sir Charles Barry, Knight, R.A., F.R.S., &c., architect of the New Palace at Westminster, and other buildings, who died 12th of May, A.D. 1860, aged 64 years, and lies buried beneath this brass."

The following text is also inscribed round the outside of the marble slab:—"Whatsoever ye do, do it heartily, as to the Lord, and not unto men; for so ye serve the Lord Christ."—Col. iii. 23, 24.

A NATIONAL PALACE OF ART.

THE national taste for art has extended itself so rapidly among all classes during the last twenty years, as to be become almost a national characteristic. The culture and development of a taste for the fine arts, and the development of the power of critical appreciation of the works of various classes of art, bid fair to become necessary parts of even an ordinary education. It is true that the age of the virtuoso, of connoisseurship, and of dilettanteism has passed away, but a more genuine and manly appreciation of art has taken the place of those hot-house growths of aristocratic taste and refinement. A truly national taste for art has in fact so widely manifested itself, and taken root so deeply, that the time present has become neither more nor less than a true golden age for artists. If any one doubt the truth of this assertion, let him go to any one of the artistic exhibitions now open, from that of the Royal Academy to the most unpretending of these annual displays, and he will find almost every picture of the slightest merit *sold*. At the exhibition of the Society of Painters in Water Colours, always one of the most charming of the season, this is most strikingly the case; for, not only are all the good pictures disposed of, but all the indifferent ones have also met with purchasers, and, with very few exceptions, the bad ones have likewise found their amateurs; a fact which induced a visitor to say, on a recent occasion, that the taste for bad pictures appeared to be becoming a positive mania; the explanation of the seeming paradox being, simply, that the supply of good pictures is not equal to the demand; and impatient purchasers, who cannot get good ones, are content to get bad ones rather than have none at all; for to buy one or two new pictures once or twice a year has become almost as necessary a sign of respectability as the ordering of one or two new coats. This rapidly increasing taste for modern paintings is but a part of the vast increase in the national appreciation of art in general; not only on account of the charm of its refining influences, and its power of awakening a wider sense of intellectual pleasure, such as can emanate from no other source, but as a striking evidence of our national dignity and high civilization, and as a prolific means of national wealth and an undeniable signet-stamp of our high standing among the most advanced nations of Europe. It is in considerations of this kind that we may seek for the incentive which of late years, from time to time, has induced our Government to bring forward scheme after scheme for the improvement and extension of our national picture gallery, or the erection of a new one of higher character.

Sufficient time has now elapsed since the promulgation of the last of these propositions (that of Mr. Cowper, which was both introduced and defeated on the 7th of last month) to enable us coolly to refer to a few of its defects. After all the official and parliamentary discussions on the subject that have already taken place, it appears somewhat extraordinary that the gist of the scheme should consist in "abandoning the whole of the building in Trafalgar-square to the Royal Academy," and building a new National Gallery on part of the site of Burlington House! It would seem to any one bestowing a little serious thought on the subject that, granting the separation of the Royal Academy and National Gallery to have become necessary on the ground of the absolute necessity for increased accommodation for the latter, the best of the two sites should be at once conceded to the National Gallery; and there cannot be a doubt about the best site of the two named being that which forms the north side of Trafalgar-square: therefore, if advisable to remove either institution to Burlington House, undoubtedly the Royal Academy should be the one so removed. Mr. Cowper, in order to enlist national ambition and pride on his side of the question, first alluded to words forming part of a resolution to the effect that the proposed building for the new National Gallery should be "one worthy of the British people, which would command universal admiration, and do honour to the age." But, after this exordium, the speaker next endeavoured to enlist the sympathies of the rigid economists, and proposed to do the thing cheap. His proposed building was to occupy the whole of the present garden of Burlington House, being about an acre and a half, and forming half the extent of the entire site. Mr. Cowper proposed to erect on that acre and a half "the very best building in Europe"! And for what price? Why, for the small sum of 152,000*l.*! The best building in Europe thus proposed to be built was to "*consist all of one floor*," and to be lighted from the top. The galleries thus suggested were to be three in number, parallel to each other, and to be crossed by three other similar galleries. "The effect produced by that means would, he thought, be very grand." But is it not self-evident that in such a group of galleries of one story, the lowness of the elevation would alone prevent their external aspect from presenting an effect of any importance, as they would not be much more than half the height of the present National Gallery, which has been so abundantly abused for its want of sufficient elevation, that radical defect being the only cogent reason, till quite recently, for erecting a new National Gallery at all. What, then, could be the chain of reason which could lead to a proposition for erecting a building much lower than the old one, so well abused for its lowness? Was it intended to remedy the external defect by the splendour of the interiors? Why, the mere building of three galleries, each 200 feet long, as proposed, and crossed by three other galleries of similar dimensions, would cost nearly all the money if substantially done, even in the plainest possible brick, mortar, and plaster style, taking into consideration the absolutely necessary finishing, and leaving entirely out of the question all decorations of a monumental character. Such a building would, in short, merely provide first-rate warehousing room for our national collection of pictures; and this, according to Mr. Cowper's own showing, would, at their present rate of increase, only accommodate them for ten years.

But then, Mr. Cowper continued, "if it were desirable to have an architectural erection, it might be substituted for the buildings of Burlington House." Now, all this patching and pottering is utterly beneath English dignity, and quite at variance with the national longings on the subject, which are, there can be no doubt, in favour of spending sufficient money to insure the erection of such a building as shall be, in the words of Lord Broughton's commission (referred to by Mr. Cowper), "worthy of the British people, and which would do honour to the age, and command universal admiration." Such a view as that can only be carried out by a bold and radically original proposition; and such a one would receive the approbation of Parliament and of the people, and the erection of a palace of art worthy of the nation be rendered a matter of comparative certainty. With such an object in view, and the apparent certainty of its being nobly carried out, unshackled by trammels and prejudices, no reasonable sum would be grudged for the purpose. But the whole scheme, as well as the building itself, must be rendered truly national.

And now it is time to say something of the character, of the various purposes, of the extent, and also of the site of such a palace of art as the one proposed. The national palace of art which the people of this country are looking forward to, and which they will not hesitate to pay for splendidly so soon as they see anything like good security for obtaining the thing they require, must be simply magnificent, both in dimensions, design, and purpose. John Bull is no longer content to warehouse his treasures, he is determined that the casket shall be worthy of the jewel. He will, he says, have a palace for them, instead of a shed.

The present Emperor of the French, in completing the Louvre, has converted it into a vast palace of art,—and the palace is worthy of its precious contents. It is a truly noble architectural work, open as it may be, and is, to artistic criticism, on many accounts; but, on the whole, it is such a national monument as cannot, at present, be matched in the world. Nevertheless, we do not desire a copy of the Louvre: far from it; and many of our cleverest architects appear sadly wanting in national feeling in art when they allow themselves to be carried away by the fatal ease with which the fascinations of the style of that great work may be imitated. No: we want no reproduction, either of the magnificent Louvre, or of the noble museum of Berlin, or of the lesser beauties of the celebrated art galleries of Munich. We want something national, something entirely our own, and yet which shall be fully equal in its own national character to the Louvre itself, or any other rival building; equal in grandeur of dimensions, equal in richness of design, in copiousness of decoration, and more than equal in special fitness for its destined purpose. And that we have national art-talent in abundance equal to the task, if properly appealed to, there cannot be the slightest doubt. The originality, boldness, and national character of much of our new street architecture, where no committees of virtuosi have interfered to dictate style, or encumber the designer with objections, or, worse still, suggestions, are sufficient to prove that there exists architectural talent of high order and national character equal to the task in question, whenever it shall be called upon to execute it.

As to the site, that of Trafalgar-square is undoubtedly the best available one; but then there must be a clearance to make more room. The barracks and the workhouse, and something more, must disappear in the rear of the present building; and to the west, as far as the Haymarket, there must also be a clear space, which would not be very costly, inasmuch as the frontages only are of high value, while the remodelling of the wretched property in their rear would almost pay for itself. The most costly part of the clearance would be that of the "Middle-row" of the west, the block of houses standing between Pall-mall East and Cockspur-street. These clearances made, which, with the exception of the last named, would be repaid in the shape of the high value

of newly-created frontages, there would be a truly noble site for the erection of a National Palace of Art,—a site which might be made still greater in extent than proposed, and yet not more costly, if more new and valuable frontages were created by still greater innovations and clearances. Such clearances might include even Leicester-square and Cranbourne-street, and even a large space to the north of Cranbourne-street, all of which ground, from its situation, is capable of being made to yield enormous revenues, instead of the paltry returns derived from the present wretched buildings. In short, an enterprising company might do the whole thing at a profit; and it would, perhaps, be more consistent with our character as a truly free people that our National Palace of Art should be the creation of private enterprise.

But to return to the pith of the subject—the palace itself. This structure should contain many distinct parts. As Lord Palmerston well remarked, in reference to the equal interests of the National Gallery and the Royal Academy in the proposed measure, it should not be overlooked that the National Gallery has been especially created and maintained as a collection of monuments of art essential to the successful training of successive generations of artists; as the chief of many important means of assistance to students destined to become members of the Royal Academy of Painting; and therefore the interests of the Royal Academy itself should not be for a moment lost sight of while considering the suitable housing of those precious monuments, the conservation of which is intended to assist the labours of that Academy and other institutions established expressly for the advancement of art. Therefore, while superb galleries—magnificent works of art in themselves—should be erected to enshrine the masterpieces out of former generations of artists, the studies and interests of the present race must at the same time becared for. It is with similar convictions that one might recommend that suitable, and even splendid, accommodation should be afforded to the council and members of the Royal Academy (if possible) in the same building, as at present, in preference to such a separation as the one proposed. Indeed, distinct schools of sculpture, architecture, and painting ought, it would seem, to be established within the precincts of the national palace of art, so as not to separate the students of any one of those branches of the fine arts from the models which are destined to serve as guides to their studies, and as landmarks to them in tracing the history of the arts which they are following for honour and fame, as well as a means of honourable income.

The collections should, therefore, be arranged so as to be most accessible to the respective schools. The antique sculpture from the British Museum, and other national collections, should be nearest to the school of sculpture: the paintings should be closely accessible to the school of painting; and the architectural specimens from Kensington, and other sources, should be close to the school of architecture; while each of those schools should be organized upon enlarged, improved, and eminently practical systems. The great rooms for painting, of large size, and also for sculpture, such as it might be desirable to light from the top,—such specimens, for instance, as the cartoons of Raffaelle from Hampton Court, in painting; and, in sculpture, the colossal remains from Nineveh, in the British Museum,—might form transverse galleries, separating the great quadrangle into a series of compartments, but only as high as the first story, the top-lighted galleries being only on the ground floor, while the apartments for smaller works might occupy the first and upper stories. Monuments of other branches of art should find their proper places in a similar manner; those of the jeweller, the porcelain worker, and many other branches of art (none of which should be neglected), each having assigned to it a distinct series of apartments; and thus the collections of South Kensington, of the British Museum, of Hampton Court, and of the National Portrait Gallery, would all find collectively a fitting and splendid home. Among the subdivisions of the palace of art, one of the most prominent should consist of a series of galleries for the reception of the works of living artists, of which a certain limited number only of the very highest character should be purchased by the Government, wherever extraordinary merit appeared to render it advisable. This division should form one of the most extensive as it assuredly would one of the most attractive of the palace. In addition to all this much space would be required for the suitable display of several classes of ancient monuments not usually shown to the public in an instructive manner. For instance, one of the finest cabinets of coins in the world, exhibiting as it does in an unbroken chain of examples a most interesting branch of art of a very high character, that of die sinking, is shut up in what may be called a private room of the British Museum, and never seen by the public. This very collection, or, at all events, a selection from it, should be exhibited under glass in our projected palace, arranged in chronological order, each coin having an attached label with the name of the state or sovereign by whom it was issued, and also its own name as a coin, its value, and its date: and in this department examples of the national coinage should form a distinct, complete, and most copiously illustrated series.

Such a palace of art as the one here supposed would, indeed, form a grand national monument, such as strangers from all parts of the world would come to see; and the influx of such visitors would yearly add to our national wealth the money that they would be thus induced to spend among us. It would be difficult to imagine a national institution of more attractive character than such a palace of art, containing a vast gallery of painting by native artists,—a similar gallery of modern sculpture, an historical portrait gallery of British worthies of all ages; in addition to which would be attached extensive galleries devoted to the preservation of paintings by the old masters, and others for the display of antique and Mediæval sculpture, and many series of chambers filled with monuments of art of various classes, and of all ages, in which chronological order as well as the class of work should always form a prominent feature, forming collectively an almost endless series of examples of beautiful works in every conceivable branch of art,—intricate and beautiful devices which the eye could not dwell upon without receiving both delight and instruction.

But before we can possess such a concentration of the monuments of art of all ages, and such a display of native works of our own time, we must first get a place to put them in; and the place to put them in must be in itself the noblest monument of them all,—a building, too, stamped with the spirit of the present age. In the space of our few remaining lines, it is difficult to state in detail the precise nature of the style which should characterize such a building in England in this second half of the nineteenth century; but, without straining after novelty for mere novelty's sake, it is easy to conceive that a building of original feeling and style might be produced without any unnatural efforts at change at any price.

As regards the avoidance of Gothic, it is only necessary to eschew the pointed arch, and the special kind of window tracery found in that school of art, as also the marked peculiarities of the Gothic treatment of accessorial decorations. The main structural principles of the style may be preserved wherever useful, as they belong, in fact, like all first principles, to all styles and all epochs. In avoiding Greek and Roman imitations, it will only be necessary to beware of repeating the Corinthian or Ionic capitals, the precise proportions of the columns, and the exact parts of the Greek or Roman cornice, and their special decorations. The main features of stone columns and stone beams may be used as ever-enduring principles of structural art whenever required. Thus, by making the main structure suit itself, especially in its main forms, to its own purpose, and by seeking appropriate and original decorations from natural sources, and treating them with a true feeling for their own special nature, with the necessary modifications of their natural features when reduced to the form of artistic decorations, a fresh national character will necessarily grow up. But in a building of the class under discussion, baldness, above all things, must be avoided, and richness and splendour aimed at as the one great necessity, even to the extent of exuberance. But it is premature even to hint at details before we have got the Parliamentary grant of the two or three millions required for our purpose. The means, however, will most certainly not be withheld when the end is unmistakably in sight; that is to say, so soon as a genuine and grand prospectus shall be properly brought forward, accompanied by ample security against jobbery of all kinds. With a national revenue of above 70,000,000*l.*, it is absurd to suppose that we cannot spare half a million a year, for five or six years, over and above all other demands, for a purpose so truly national, and so important to our character as a wealthy and highly cultivated people. H. N. H.

PARK LANE STRAITS.

VARIED propositions to improve the great central thoroughfares, and the agitation of the question in the *Times*, will, it is to be hoped, stimulate the authorities, if, indeed, there be any who have the inclination and the power to advance the deplorable condition of our great metropolis, which in this respect is truly contemptible as compared with Paris or any other great city. A letter by Mr. Nelson, architect, recommends the extension of Audley-street to Down-street, and thus, by an issue into Piccadilly, to save the Park-lane traffic, thereby giving a direct line of access for a great portion of the N.W. postal district.

On reference to the *Builder*, of some eight or nine years back, in an article entitled, "A Short Cut by a Long Route," it will be seen that the extension of Audley-street was suggested by the writer, to run *in directum* to Piccadilly; or else, in order to avoid the expense of pulling down three valuable houses in Seymour-place and Curzon-street, as well as the Marquis of Londonderry's, with several others in the narrows of Park-lane, *to form a road by a trifling deviation through the private gardens into Hamilton-place.* The importance of this much-needed easement for public traffic has now become so notorious, that the necessity has been admitted by the Board of Works, and debated in Parliament. Whichever of the modes of transit be adopted matters little to the public, provided the thoroughfare be open, easy, and direct; but to diverge eastward into Down-street, as recommended by Mr. Nelson, would be much further out of the line of Baker-street and Audley-street than to take the issue into Piccadilly by Hamilton-place, or the direct course of Audley-street, which would strike out just over the foundation of the south-west corner of Park-lane.

Then as to the suggestion that direct lines of thoroughfare are needed across Mayfair, north and south by Grosvenor-square, nobody will conflict that question; but the great object is to attain the most useful line of intercourse where most required, and that is precisely the one in question, to relieve both Park-lane and the Audley-street lines by *one cut*. To form traverses by Clarges-street, or other existing narrow lines, might throw open a valuable district, at present of a retired and aristocratic character, but could alleviate little the aggravated and still growing inconvenience of congested traffic between the north-western and south-western divisions.

As to a straight or strategic causeway, although it would be of course more desirable and more effective, as communicating between Regent's and the Green parks, we have no authoritative predilections for such a provision in this capital. The main object to be desired is a direct and open causeway. Such a route might be attained through Hamilton-place (by permission of the Dean and Chapter of Westminster) through their gardens; or, if the dignity of the metropolis is to be regarded, then the straight line from park to park, opening into Piccadilly, would assuredly be the grandest.

If in this great city we cannot carry out new designs good in themselves, how can we hope for improvements which, being only accessory to the extension and completion of fine causeways already in existence, private speculators have no inducement to undertake? Still, there is a hope that Parliamentary interest, once evoked, may give the *fiat* for a great public work.

A quotation of a portion of the former article in the *Builder*, before referred to, may not be amiss, viz.:—

"Whatever improvement be made at the issue of Park-lane into Piccadilly,—and there is no great thoroughfare of the West End so inadequate to the traffic,—that same line would go in aid of the great northern line of Baker-street. Hamilton-place is in the direct range, and it would also come into the slightly sweeping curve of the Lane; but as there are some costly mansions in the way of the Audley-street continuation, that route might, by a slight curvature, strike through Little Stanhope-street into Hertford-street, and so by Down-street, into Piccadilly."

No one would desire to infringe upon the park, nor to curtail its extent by a rood. On the contrary, the public voice, if polled, would decide for the *clearance of the ranger's lodge* (the most picturesque spot), as well as the guard-house and magazine; but in urging the applica-

tion of a strip, say 60 feet wide only, and 500 feet long, extending from the south end of Seymour-place to Hamilton-place, no disfigurement could be perpetrated; but, on the contrary, the exceedingly ornate character of these pretty grounds might be still maintained, whilst an inestimable source of accommodation would be opened to the public; and the Dean and Chapter, who own the grounds, and who have long dedicated them to public health and convenience, would assuredly not oppose so pious a user.

It might be expedient, in order to complete a grand thoroughfare, to withdraw the iron rail park fence some few feet inwards, so as to make the causeway an equable width throughout, beginning at Oxford-street for some short distance; then from the Grosvenor-gate southward towards Holford House. That done, here would be truly a noble public route; for the aspect of the houses, as well as of the park, would be thereby improved.

The line of Audley-street already communicates, by a short turn through Stanhope-street, with Park-lane westwards; and Curzon-street eastwards affords ample opening for traffic, which may run into Piccadilly by Half-Moon and Clarges streets, and also by Bolton-row. The additional opening of Hamilton-place would therefore be quite sufficient, seeing that the present strait or gut of Park-lane would still be retained; and, so far as the view from the mansions between that and Seymour-place are concerned, a strip of bright shrubbery would yet screen off the traffic, which might (*pro tanto*) be withdrawn from under their windows.

It is right to state that Park-lane, as now existing, is not of an equable width throughout. At the Oxford-street end it is 37 feet wide, from Brook-street southward: it then increases to 40 feet. Opposite to Grosvenor House it is 53 feet; from South-street to Holford House it is 43 feet; while at the Stanhope and Grosvenor gates there are large spaces thrown into the causeway, as the gates sweep inwards towards the park; but at the issue into Piccadilly the total width, including footways on either side, is but 31 feet!

Having premised how great is the repugnance on the part of the public to encroach on the liberties of the park, it may seem strange to advocate the obtrusion of a few feet upon its precincts; but, seeing that an important public thoroughfare cannot be accomplished effectively without shifting the fence, it is proposed to the Chief Commissioner of Woods and Forests to withdraw the iron railing which runs first from Oxford-street nearly to Grosvenor-gate, and thence also to the southern end of Seymour-place, in a direct line, *only 6 feet inwards*. This would leave a good causeway for carriages, and a footing on either side; and, by a slight deviation south of Stanhope-gate, the road might be continued almost direct through Hamilton-place.

An opportunity might then arise for substituting a new railing, and of improving its aspect, without much increased expense; and, at the same time, it would not be necessary to *cut or disturb a single tree or shrub!*

This plan will secure a great boon to all moving life in London, and at the same time the change or reduction of park extent will be utterly impalpable, whilst not a single flower of the pretty borders will be interfered with.

CRIMEAN MEMORIAL CHURCH, CONSTANTINOPLE.

THE contractors for this building are Messrs. Rogers & Booth, of Gosport, who sent out a staff from England, and commenced operations in May; so that the work so frequently referred to in the columns of the *Builder*, and so long delayed, is now progressing, and will, we understand, be completed within two years.

SOME PECULIARITIES IN ANCIENT AND MEDIÆVAL IRISH ECCLESIASTICAL ARCHITECTURE.

MR. DU NOYER'S paper (addressed to the Kilkenny Archæological Society), of which we gave the greater portion in our last Number, has proved so interesting to some of our readers, that we are led to print the remainder of it, and give the omitted illustrations. Fig. 1 is an exterior view of the ruined chapel of St. Catherine, on the shore of Nook Bay, in the county of Wexford. The building is attributed by the writer to the middle of the fourteenth century.

The walls of this building are massive, and batter from their base, to the height of 4 or 5 feet; and they terminate in a projecting parapet. The east gable is pierced by a flat-headed window of two lights, terminating in simple but graceful cusped tracery of flamboyant character, of the exterior of which the accompanying cut is a correct illustration (fig. 2). At either side of this window there is a peep-hole, which originally commanded a view of the land approach to the place.* The north doorway is equilateral pointed, the arch being formed of two large stones, the angles of which, and those at the sides of the doorway being chamfered as low down as the commencement of the batter.

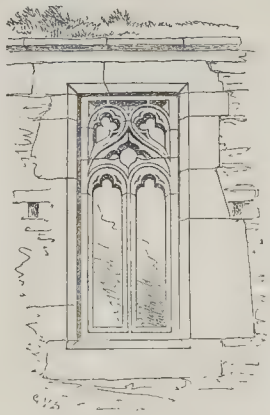

Fig. 2.—Window, St. Catherine's.

On the exterior of the wall, to the left of this doorway near the springing of its arch, and at the height of about 6 feet from the ground, there is a small tricusped niche, which, from its peculiar position, would lead one to suppose that it was intended to receive a lantern to act as a beacon to vessels passing over the neighbouring portion of the Waterford estuary. On the opposite side of the doorway, and just beneath the string course of the parapet, there is a small window, by means of which parley could have been held with any one at the door. We give a view of this doorway (fig. 3), with its lantern niche and window.

The doorway in the south wall, which is seen in the view through that in the north wall, is flat arched in the interior, but is surmounted by a massive single lintel externally.

[Of the Castle-church at Clonmines, described in our last, we add a view of the Interior, looking west, showing the corbels intended to support the floor of the gallery, and the entrance doorways to the winding stairs leading to this upper floor and roof (fig. 4). We continue the paper.]

Figs. 5 and 6 show, respectively, the plan of the basement, and of the roof open to the air above the vault.

The turret at the north-west angle surmounts the winding stairs at the basement floor, while that on the north-east angle has a large oven beneath it: both these turrets are flat roofed, with high and embattled parapets.

Figs. 7, 8, and 9 represent the three chrism or consecration crosses, which were scraped in the fresh plaster of the walls at the time of consecration of the building.

Fig. 7. On the east wall, at the right hand side of the east window. Fig. 8. On the south wall, under the first corbel for supporting the floor of the gallery. Fig. 9. Also on the south wall, under the second corbel, and within 2 feet 10 inches of the west wall.

From the fact of two of these consecration crosses being so far away from the eastern or groined end of the room, it may be that the entire of the basement floor was appropriated to worship, and that the habitable portion resembled a modern gallery to a church, but closely partitioned off from the groined end of the building.

With regard to these crosses, it appears from some of our most ancient sculptured monoliths, many of which bear Ogham inscriptions, that a cross formed by the intersection of four parts of circles, and ending in eight points, or such a modification of it as we see in fig. 9, is that form of this emblem which was introduced into Ireland by St. Patrick, or the earlier missionaries, and they must have got it from the Greek or Eastern Church, which still retains it.

I believe that in this particular shape of the cross we have *not* the emblem of the Passion of our Lord, but that of the descending dove with outstretched wings, which alighted on him at his baptism, and which was the physical confirmation of the Divine voice which acknowledged him as "the well-beloved son." A slight modification of the lowest member of this geometrical figure would supply the head of the bird, while the upper part would be the fanned out tail, and the side expansion the wings.

In the ancient baptistery at Poitiers, a building of the third century, and in all the oldest French, German, and Lombardic churches, some of which were originally Roman Basilicæ, and in the ancient cathedral of Athens, which may be of the second century, the cross when introduced is always of eight points, with the shafts slender, and the whole enclosed in a circle. This form of cross is also that invariably sculptured, enamelled, or painted within the nimbus encircling the head of our Lord in works of art down to the thirteenth century, not only on the Continent, but in England. It will be at once apparent how appropriate a place this is for such an emblem, as typifying The Dove, while that which would only recall the emblem of the Passion would here be quite inadmissible.

It was not till many centuries after the establishment of the Eastern Hierarchy that the *Latin* form of cross, or that made by the intersection of two pieces of wood, was recognised generally over Western Europe; the first idea being one more lofty, more emblematic of the divinity of our Lord, while the other appealed to his weakest part, his human nature.

Space will not allow me to enter more fully on this interesting inquiry as to the origin of the cross of eight points: suffice it that I believe it to be emblematic of the Dove, and I would therefore propose to call it "the dove cross." Those interested in the matter, I would refer to "Les Monuments Anc. et Mod.," by Mons. Jules Gailhabaud, where they will see many illustrations bearing out the opinion which I have here ventured to express.

With regard to the ecclesiastical buildings at Clonmines, Archdall, in his "Monasticon Hib." states, at p. 734, that Clonmines is a borough town in the barony of Shelburne, six miles south-east of Dunbrody. The family of Cavanagh founded a monastery here for Eremites following the rule of St. Augustin. In A.D. 1385 it was enlarged and beautified by Nicholas the Clerk, the son of Nicholas; and the friars of the order of St. Dominick afterwards obtained possession of it.

Nicholas Woding, the last prior, surrendered this priory, being seized of the same, and of a church and belfry, a dormitory, a hall, three chambers, a kitchen, cemetery, and one close within the site thereof—annual value, besides reprisals, 3s. 4d.; also of one small tower, four messuages, ten gardens, one acre of arable land near St. Keran's Pyll (or creek), and the tithes of the said garden; also 2s. chief rent arising from Colgan's lands in Clonmyn aforesaid—annual value, besides reprisals 23s. 8d. On the 25th August, 35th of Henry VIII. (A.D. 1544), this monastery with its appurtenances, together with the Dominican friary of Rosbercon, in the county of Kilkenny, was granted for ever to John Parker, at the annual rent of 2s. 4d. Irish. He sold them to John Blake, of New Ross.

It is exceedingly probable that the church stated to have been erected by Nicholas the Clerk, at the close of the fourteenth century, is the building I have described as the fortified church, or castle church, for its architectural features point precisely to such a period, and it may be one of the beautifications or additions mentioned as having been made by him.

It is evident that great pains were bestowed in the construction of this remarkable building, which on an emergency was intended to act as a castle or defence to the neighbouring abbey, should that establishment ever be beleagured by hostile natives; and if all communication between it and the monastery were cut off, and if the monks and their retainers happened to be well provisioned, they could have held their own against any foray, and, if necessary, stood a siege.

* St. Catherine's is not unique in this respect: the fashion of constructing peep-holes in the east gable, and sometimes in the side walls of fourteenth century churches, appears to have been very prevalent in Ireland.

ST. STEPHEN'S CRYPT: THE CHAPEL OF THE HOUSES OF PARLIAMENT.—RESTORED UNDER THE DIRECTION OF MR. E. M. BARRY, A.R.A.

THE CHAPEL OF THE HOUSES OF PARLIAMENT, FORMERLY ST. STEPHEN'S CRYPT.

ST. STEPHEN'S CRYPT, in the New Palace at Westminster, is almost the only portion remaining of the old Palace at Westminster, and formed the basement story of St. Stephen's Chapel. After years of desecration it has been carefully and effectively restored and decorated, and is now prepared to be used as the chapel of the New Palace at Westminster, according to the original design of the late Sir Charles Barry. The restoration has been carried out by Mr. Edward M. Barry, in whose charge the New Palace has been placed since the death of his father, in 1860.

The length of the chapel is 90 feet, and it is 28 feet wide, and 20 feet high. It consists of five bays, the easternmost of which is raised to form a sanctuary. There is a private entrance at the north-west corner from the palace, and access is given to the public by a door near the angle at the southern end of Westminster Hall down a flight of stone steps, thence through a door on the right hand.

On entering the vaulted chamber, the spectator is struck with its fine proportions and sombre effect, its bold moulded groinings, and richly sculptured bosses.

The stained-glass windows, seven in number, are by Hardman, and represent the Ministry and Martyrdom of St. Stephen. The walls beneath the windows are covered with alabaster and inlaid marble, disposed in a rich diaper pattern, and the whole of the groining is decorated with arabesques and figures executed on gold grounds. The old bosses have been carefully preserved, and represent the martyrdom of St. Stephen, St. John, St. Catherine, and St. Lawrence, and also St. George and the Dragon, beautifully executed.

The east wall is panelled with deep recessed tracery, with full-length figures on a gold ground. There are nine panels, the centre of which is to contain a cross. The other eight panels represent St. Peter, St. Stephen, St. Oswald, St. Ethelreda, St. Edmund, St. Edward the Confessor, St. Margaret of Scotland, and St. Edward the Martyr. The reredos is to be a low structure, of marble and mosaic, and is not yet completed. All the columns are of polished Purbeck marble, and have been executed by Mr. Field, who has also carried out all the other marble and alabaster work. The decoration has been done by Mr. Crace, from the designs of the architect, except the figures on the east wall and the easternmost groin, which latter have been entrusted to Messrs. Clayton & Bell. The chapel is now almost ready for occupation, and will contain about 250 persons. It was used within our memory as a dining-room for the Speaker, and we rejoice to find that after having been so long devoted to ignoble uses, it is likely once more to be dedicated to those purposes of religion for which it was originally designed and constructed.

ENLARGEMENT OF SUSSEX COUNTY HOSPITAL.

A SPECIAL general Court of Governors of the Sussex County Hospital has been held in the board-room of the institution at Brighton, to consider a report from the medical officers, recommending important improvements and enlargements to the hospital, which had been adopted by the committee of management; and to sanction the issue of advertisements calling on architects to send in plans for such improvements and enlargements, and offering premiums of 100*l.* and 50*l.* respectively for the first and second best of the plans sent in.

The Rev. J. H. North presided, and in the course of his introductory remarks said, it would be in the recollection of many that erysipelas prevailed in one of the wards a few years ago, and he was sure the medical gentlemen would bear him out when he said that that was a disease which resulted chiefly from a want of proper drainage and proper ventilation. At the time the malady prevailed, an inquiry was set on foot, and it resulted in the solution that the drainage was inefficient. Steps were immediately taken to arrest the evil, which were effectual; and *since that period there had been no recurrence of that particular form of disease in the hospital.* The disease was very prevalent in many hospitals, more especially in hospitals in confined situations; but even in such places, with not half the advantage which the Sussex hospital possesses in the pure air that sweeps through every ward in the building, where the case has been met stoutly by sanitary measures, those hospitals have shut out the disease. More recently, and during the last winter, another form of disease had shown itself in this hospital, a disease known under the name of pyæmia. This was also a mischief traceable, almost infallibly, to some sanitary defects in the ward where the patients happened to be. *This evil had also been remedied.* The present proceedings emanated from the medical officers of the institution; and this being the case, it carried with it even a still greater weight. There was one advantage the hospital possessed over many others: it was situate in a capital position as far as air was concerned. A gentle and equally-distributed current of air was constantly passing through the hospital by day; and this, in some measure, made up for the deficiency of actual space; but at night, when the hospital was shut, that healthy current of air could not pass through the building. He took it that they were all agreed that as much space as possible should be allowed for air; but at present there was not sufficient space. With respect to the offices of the hospital, this opened another branch of inquiry. Nearly every office wanted enlargement.

Sir Charles M. Jackson read the report of the medical officers, who, in committee assembled, had passed the following resolutions, which were embodied in their report:—

"That more ward room is wanted for patients in the hospital; that the Museum and Library should be removed out of the main building into apartments adapted to their probable increase; that increased accommodation for the purposes of baths, lavatories, and water-closets is required for both the patients and the officers of the Hospital; and that if possible sea-water baths should also be provided.

That small wards for various special purposes are much needed, as well as convalescent wards or large day-rooms. Also a reception-room for patients applying for admission.

That more and better accommodation is required for the out-patients and for the medical officers of this department, providing especially for the better separation of the sexes, and a better arrangement of the baths and water-closets."

The report was signed by every medical officer of the institution.

A resolution that the report be received and adopted, was finally substituted by one in which the word "approved" was inserted in place of "adopted," and unanimously carried.

The next resolution related to the premiums, and in moving it Sir C. Jackson stated that the committee were of opinion that they would not be able to get the best plans unless they held out some inducements to architects in the shape of remuneration.

Captain Fitzmaurice seconded the resolution. The original architect of the building, he observed, was Sir Charles Barry, who received no remuneration. (Mr. Goulty said that Lord Egremont compensated him.) They could not expect to get architects to work for nothing; and he thought the plan proposed by the committee was the mode least open to the charge of jobbing or favouritism. He thought the premiums offered were very moderate. It was necessary that they should get good plans, as that might save them thousands.

Mr. Tamplin could not see the slightest necessity for offering premiums. What would they do next? He believed architects would be glad to have an opportunity of securing so good a recommendation as having their names associated with such an institution as the Sussex County Hospital. They would esteem it an honour, and he was sure numbers would be found to send in plans gratuitously.

Dr. Fussell was opposed to everything in the shape of lavish expenditure. It had been urged that, if they were to hold out premiums for plans, they would avoid jobbing. This was not the point. Was it necessary to pay 150*l.* to architects for plans? He would say, most emphatically, certainly not. Again, they were told that by offering premiums they would be getting eminent advice. This was all very well, but was it necessary that they should have eminent advice? They did not require eminent sense for altering or enlarging the hospital: all that they required was common sense,—that was the best advice they could obtain. And when they spoke about giving premiums for the reason that men could not be expected to work for nothing, did they forget that every day of their lives they were receiving gratuitous services? He thought, if premiums were offered for plans, on the same principle they ought to offer some gratuity to their physicians and surgeons. He wrote to the authorities of the Oxford Infirmary, and asked them if they gave premiums to architects for the best plans? The answer was, "Certainly not." The committee of the Bath Mineral Water Hospital had recently made improvements to the extent of 20,000*l.*, and they gave no premiums for plans. The same thing occurred with regard to the Leeds Infirmary.

The Chairman approved of the proposition, but thought lower premiums might be given to a limited number of unsuccessful competitors, as the successful competitor would be amply remunerated in another way without premium.

Several other gentlemen spoke against the motion, and ultimately Sir Charles Jackson withdrew it, at the same time remarking that it was not intended to give these premiums out of the funds of the hospital. They would have come out of the new funds.

Mr. Hussey moved, "That no portion of the proposed works be commenced until two-thirds of the estimated cost of such portion of the works has been subscribed, nor until the plans have received the sanction of a General Court." This was carried unanimously.

How the designs *are* to be obtained was not stated.

THE LONDON FIRE-BRIGADE.

THE progress of the London Fire Brigade under the active direction of Captain Shaw is satisfactory, although much yet remains to be done before the lives and property of the dwellers in the metropolis are rendered so safe as we might reasonably expect in this scientific age. It is true that the old-fashioned hand-engines are rapidly giving place to those which are worked by steam power; and we are told that the electric telegraph has been employed to ensure the simultaneous action of the men and engines at the various stations. Still this power can and doubtless will be used to a far greater extent than it is at present, and with the most beneficial results. Besides a perfect means of communication between the different engine-houses, there should be the means of telegraphic despatch between the police stations, and also at the spots where the fire-escapes are kept, and Watling-street, the head-quarters of the brigade.

The writer remembers, years ago, the slow management of the fire-engines in some of the chief towns in the north of England. Then there were the parish-engines, which were very ineffective, and certain engines of a better kind, which were provided by the corporate authorities. For the management of these a sort of brigade was formed, that for the most part consisted of men engaged during the day as bricklayers, or in other branches of the building trades, which enabled them to climb about with activity in case of the outbreak of fire. These men resided in different parts of the town; sometimes at a considerable distance from each other; so that delay generally took place before the parties could be summoned to their duties; and during the daytime they were often engaged in work or in other ways, and so could not be found. In the night, when the sleepy and almost useless old watchman became sensible that a fire had broken out, he was often impotent for action, and a long period elapsed before the men could be knocked up, attired in the suitable habiliments, and brought to the scene of action. In Newcastle-on-Tyne, for instance, the water-supply was ill laid on, and in many parts of the town, from want of water the fire-engines were of no use. To add to the difficulty, the police consisted of about a dozen officers called the "town-serjeants," and these were scattered in different parts,—here and there in out-of-the-way spots, in "chairs,"* alleys, &c. So that frequently there were no sufficient means of preserving order amongst the crowd; and so the movements of the firemen were often interrupted, and danger was incurred.

It was a great improvement when a powerful fire-engine was placed at the barracks, situate about two miles to the north of the town, and the soldiers were well drilled into the manner of effectually working it: it was generally the case that the barracks engine was the first to arrive, and rendered more effective aid than the other forces joined together. In those days the

* Many of the narrow alleys in this town are called "*chairs*;"—for instance, "Pudding-chair," "*Manor-chair*," "*Denton-chair*." The writer is not able to explain the meaning of this word; but remembers once at the assizes both judge and council were puzzled by the statement of a witness that he had "seen the prisoner at the bar coming out of the chair foot."

present rapidity with which the engines can be turned out for service by the London Fire Brigade would have been as little believed in as was then the successful working of George Stephenson's railway system. At the recent night visit of the Prince of Wales to the various stations of the brigade, some of the engines were horsed, manned, and into the street, ready to start in any direction, in less time than two minutes and a half after having received notice.

All parties agree that it would be difficult to gather together a more brave, intelligent, and well-conducted body of men than those who form the London Brigade; but they cannot perform impossibilities: for the want of some such system as we have hinted at, delay takes place which yearly causes the destruction of much property and life. There is the present divided management of the metropolitan fire-engines, which will be removed when the business is made a matter of police. The rapidly-spreading suburbs require attention, and the appointment of fire stations in well-chosen spots.

There is just now, not only in London, but also in the provincial towns, an increasing desire by persons in influential positions to form amateur fire brigades—a movement not to be wondered at; for, besides the feeling that using exertions in this way is a means of doing good, there is a marvellous degree of excitement in the active performance of the task of battling with a great fire. Valuable as amateur aid is in many instances, it would not do to depend on it in such a huge and densely populated space as is covered by the metropolis, where it is needful to concentrate efforts on a large scale, and ensure the aid of superintendents and men whose time is entirely directed to an express purpose, and who are fitted to their duty by long practical experience.

In connexion with the London Fire Brigade, several men of high rank have made it a sort of hobby, and the countenance in this way shown will not be without a beneficial effect on the men, who were proud to learn that H.R.H. the Prince of Wales, in the usual costume of the fireman, helmet and tunic, and armed with his axe, mounted a fire-engine, and in the middle of the night visited several of the stations, and noticed the rapidity with which the engines and men were turned out at the note of alarm. We are glad that the Prince has shown an interest in this splendid institution. Not only during the day, but also during the hours of darkness, the dwellers in London depend on this force as an important means of protection. It might lead to good to many if his Royal Highness would, in a similar spirit, take a few strolls among the neglected dwellings to be found in certain parts of the metropolis. The experience, though painful, would be likely to produce a most important influence towards the improvement of conditions which are deplorable. The Prince is steadily winning his way to the hearts of the people.

THE ALDERSHOTT INDUSTRIAL EXHIBITION.

AN interesting exhibition has been opened in the club-house, at the Aldershott camp. This industrial exhibition has been carried out under the direction of a committee consisting of the officers commanding such regiments, corps, and departments as were willing to take part in the work,—Lieut.-general Sir John Pennefather, K.C.B., who opened the exhibition, acting as president, and the general officers commanding brigades being the vice-presidents. Colonel Lennox, deputy assistant quartermaster, and other officers, acted as secretaries and treasurers.

The object of the exhibition is to encourage and foster in the soldiers, and in their wives and families, a taste for the practice of the useful arts and sciences. The soldiers have exhibited various articles of their own invention and manufacture, and the officers have co-operated with them by exhibiting a number of things which have fallen into their hands in periods of warfare in different parts of the world. Many of the articles which were made by the soldiers and their wives and families will be sold for their benefit, after deducting the necessary expenses of the exhibition; and some of the articles exhibited by the officers and their families will also be sold, and the proceeds devoted to charitable purposes.

The articles exhibited by the soldiers are arranged in six classes:—1st. Painting, drawing, and photography; 2nd. Carving, cabinetmaking, and carpenters' work; 3rd. Military engineering instruments, accoutrements, and equipment; 4th. Armourers' and smiths' work; 5th. Leather work; 6th. Needlework and clothwork.

The officers' collection includes many articles of curious interest; among others a superb summer dress, once belonging to the Chinese Commissioner Yeh, several fine Indian tapestries and Chinese drawings, and a number of Oriental swords of all kinds. Indeed, there is a large number of interesting curiosities from India, China, Ceylon, Japan, &c.

In the industrial exhibition are patchwork carpets made by the soldiers, and a display of carved ivory, by Lieut. Wilkinson. There is also a machine for making lint on the field of battle, invented by private Southam.

Altogether there are between 700 and 800 articles exhibited by officers and men, and their families, connected with the regiments at Aldershott, and about 400 sent on loan.

NORTH LONDON INDUSTRIAL EXHIBITION.

A PUBLIC meeting promotive of this exhibition has been held at Hoxton; Mr. F. Dove, of Messrs. Dove, Brothers, in the chair. There was a large attendance. In course of his address in advocacy of the proposed exhibition, the chairman said there was a strong opinion prevailing that the mechanics of the present day were individually deteriorating, although collectively they were progressing; and that opinion was based upon the circumstance that in consequence of the extensive introduction of machinery a great deal of preparatory work was now done by it instead of by the workman, as was formerly the case. He thought the present movement would be beneficial in improving the workman, both mentally and socially, as well as physically. Mr. Ratley explained the object of the meeting as hon. sec. of the central committee. It had, he said, been found that the master and workman did not get on very well together. The men were looked upon as machines, and an unpleasant feeling sprang up between them. It was to remove such a feeling that such an exhibition as they had met to promote had been projected, and he believed it would have the effect of reconciling labour and capital. Mr. J. Surr and others also addressed the meeting, and appropriate resolutions were carried *nem. con.*

HOGARTH'S HOUSE, LEICESTER SQUARE.

I OBSERVE it is suggested, in the *Builder*, that a memorial tablet should be inserted in the wall of Hogarth's house, in Leicester-square; but as, in the preceding number, we had been informed that the Sablonière Hotel was about to be demolished to make way for an edifice of more imposing exterior, the attempt to do honour to the dwelling-place of the first and greatest of English painters must take some other form. With this object in view, allow me to suggest that either the editor of the *Builder*, or some of its many qualified contributors, should seek an interview with the architect of the new hotel, and ascertain upon the spot whether any undoubted remains of the Hogarth period still exist in the building; and if so, whether they are of such a nature as would justify him in preserving them in the new erection.

I think it hardly possible at this distance of time to determine the particular chamber in which were—

> Closed in death the attentive eyes
> That saw the manners in the face;

and it is still less likely that any trace could be found of the bust of gilded cork, which stood for the sign of the "Golden Head," and which Smith (in his "Life of Nollekens") tells us was the work of Hogarth's own hand. But I find, from the *European Magazine* of 1801, that the apartment which Hogarth had erected for painting was still in existence as the billiard-room of the Sablonière, for which its top lighting would peculiarly adapt it; and nothing would be easier than to ascertain whether the portion of the building now appropriated to that game, is, in very deed, the room in which so many immortal works were executed. Now, as such a room, to judge from the admirable architectural spirit displayed in Hogarth's pictures, would be certain to be panelled, what so easy as to work the materials into a new room of the same size? Independently of all higher considerations, would it not prove a source of pecuniary profit to the proprietors to be able to boast of their Hogarth room? Who would not choose it to dine in? and what a zest it would give to a supper after the play! I would have it hung round with choice specimens of the artist's own engravings, without margins, and in the narrow black and gold frames in which alone they look well; and I volunteer as a free gift my own set of the "Marriage à la Mode," in the early state before the introduction of the lock of hair on the forehead of the lady in No. 2! How Charles Lamb would have delighted to play whist in such a room; and, when the punch went round, what rare stores of quaint and genial wisdom and wit would have come from his stammering lips!

But I must have done. If you agree with me, Mr. *Builder*, on the propriety of moving in the matter, pray be up and stirring, and the work is done! F. C.

MEMORIAL TABLETS.

I WAS much pleased with your article, "Memorial Tablets on London Houses." How often have I remarked to friends in walking through King-street, St. James's, that it was a pity that there was no tablet to mark the house,—I think No. 2,—in which Louis Napoleon so long lodged when a refugee in England. I hope the owner, whoever he is, may read your paper, and be induced to expend 5*l.* in a small marble slab to record a fact which will not deteriorate from the letting value of his house. W. E.

WITH reference to the article in your paper headed "Memorial Tablets on London Houses," might I suggest something of this kind as a suitable inscription for No. 57, Lower Brook-street?—"George Frederic Handel lived in this house for thirty-four years. Here he composed the 'Messiah' and other works, and died 13th of April, 1759." * A HANDELIAN.

THE LONDON HOSPITAL, WHITECHAPEL ROAD.

THE first stone of the new west wing to this hospital has been laid by the Prince of Wales in presence of the Princess, and of the Duke of Cambridge, who is president of the hospital. The estimated cost of the new wing, with the alterations depending upon it, is 27,000*l.* This amount will provide a building 140 feet long by 60 feet wide, which will contain on the basement story a large waiting-hall for out-patients, surgeons' and physicians' rooms, laboratory, dispensary, and other offices. On the upper floors will be large wards for men, women, and children, with separate wards for persons of the Hebrew faith,—providing altogether room for about 200 patients in addition to those at present relieved. The contract has been taken for 23,000*l.* by Messrs. Hill & Keddell, of the Whitechapel-road; and the work is to be executed under the superintendence of Mr. C. Barry, architect.

THE NEW BRIDGE AT BURTON-ON-TRENT.

THE bridge which replaces old Burton Bridge, and the opening of which has already been noticed in our columns, crosses the river in a straight line, giving an even carriage roadway of 20 feet, with two causeways, each 5 feet wide, making the total width 30 feet within the parapet walls, which are 4 feet high. The total length is 470 feet, or more than a quarter of a mile, and there are thirty-two openings. Of these all but two are arched, the two exceptions being covered with iron girders, so as to give height for the passage beneath them of locomotive steam-engines and trains. In addition to the main bridge there are three smaller ones branching from it, and forming outlets to occupation roads. One of these, consisting of three arches, leads to the Hay, one of four arches to the Broadholme, and a third of five arches to the Burton Meadows. The bridge is of stone from Whatstandwell. The arches are lined underneath with Staffordshire blue bricks, but the quoins, piers, and parapets, and the whole face of the bridge, are of stone. The piers rest on gravel beds, the foundations having been carried down

* See "Life of Handel, by Victor Schœlcher," pp. 227 and 120.

to these by removing 12 or 14 feet of loose shingle, &c. The designs for the bridge were made in the office of Mr. J. S. Crossley, of Derby, the engineer for the Midland Railway Company; and the work has been done by Messrs. Benton & Woodiwiss, railway contractors, who built the Marple Viaduct, near Stockport, and are now constructing the Cornforth and Wennington Railway, in North Lancashire. The work has been carried on under the superintendence of Mr. G. Haslam, as clerk of the works; and it has been regularly inspected during its progress by Mr. Bridgart, the county surveyor of Derby. Owing to the illness of the late county surveyor of Staffordshire, this county did not obtain any specific power of supervision; but Mr. Griffiths, the Staffordshire surveyor, has inspected the works from time to time during their progress. The cost of construction is about 20,000*l.*; but the bridge has been built, not by an estimate, but at a schedule of prices. The contract was at first taken by Mr. Palmer of Lowdham, near Nottingham; but after six months had elapsed, was transferred to Messrs. Benton & Woodiwiss. This has caused a little delay in the opening.

THE YORKSHIRE ARCHITECTURAL SOCIETY.

THE annual excursion of the Yorkshire Architectural Society took place on the 22nd ult., for the purpose of visiting the ruins of Byland and Rievaulx Abbeys, and Helmsley Castle. On reaching Byland, a paper on the "History and Architecture of the Abbey," was read by Mr. J. R. Walbran, F.S.A. It appears, from what he said, that the Abbey Church presents three peculiarities:—Firstly, in the extreme length of its nave—200 feet; secondly, in having a western as well as an eastern aisle in its transept, as occurs also at York, Ely, Winchester, Wells, and Beverley, and in the Cistercian churches of Clairvaux and Pontigny, in France; and thirdly, in having a transverse aisle at the east end of the choir, like Archbishop Roger's church at Ripon. Beginning his observations at the west end of the nave, Mr. Walbran expressed an opinion, backed by appearances, that the design of the façade had been changed when the builders came to that part of their work. After a vote of thanks, the company proceeded to Rievaulx, where a paper "On the Foundation and Early Abbots of Rievaulx," by the Rev. James Raine, M.A., was read, in the absence of that gentleman, by the Rev. Thomas Bayly, M.A., sub-chanter of York Minster. The ruins of the abbey were then examined in detail, and the excursion was continued to Helmsley, where a paper on "Helmsley Castle" was read by Mr. J. Ness, in one of its now desolate apartments.

SALISBURY CATHEDRAL.

A MEETING of the dignitaries and other persons connected with Salisbury and its cathedral has been held, in order to take into consideration the report of Mr. G. G. Scott, on the present state of the cathedral, and his proposals for its security and effectual restoration. This document stated that the weight and pressure of the spire had long ago caused a settlement of the piers and crushing of the lantern walls. Since 1837, efforts had been made to avert the threatened destruction of the fabric, and from time to time no fewer than one hundred and twelve struts and supports had been inserted with that view, besides the building of buttresses, and of two arches in the naves, which served to connect the northern and southern sustaining piers. These expedients had, so far, answered the purpose: the church still stands, but it stands a wonder. The pressure upon the lantern justified the gravest fears; its outer wall being cracked at every angle, and the cracks had reopened since the last repairs. All the corner piers also were cracked, some of them seriously. There is nothing, Mr. Scott avers, to insure the building against such an accident as befel Chichester Cathedral. Certain iron bands brace the walls together, and these, in the opinion of Wren, who surveyed the cathedral in 1688, were so essential to the standing of the work, that if they were removed the spire would spread open the walls of the tower and cause its instant destruction. These bands were, of course, liable to rust and decay, and it was, therefore, of the utmost importance that they should undergo a thorough investigation.

Mr. Scott proposes to strengthen the lantern story without interfering with or overloading the piers below. To this end he would have command of materials not in use when Wren, who proceeded upon the same principle, was living. Before beginning these works it would be needful to underpin and effectually drain the foundation of the church and restore the masonwork of the basement moulding. The fabric may be said to be in a bad state of repair throughout. The dean and chapter had obtained 10,000*l.* from the Ecclesiastical Commissioners; but this would hardly suffice to pay for the works now in progress: those for the security of the tower, &c. are unprovided for; so that the authorities appeal to the public to supply the further sum, from 35,000*l.* to 40,000*l.*, required. A committee was appointed to carry out the objects contemplated, and a subscription entered upon in the room, which amounted to 6,000*l.*

RECONSTRUCTION OF THE SEWER IN SKINNER STREET, SNOW HILL.

A CORRESPONDENT says,—In consequence of the extension line of the London, Chatham, and Dover Railway having to pass at a considerable depth under Skinner-street, in order to effect a junction with the Metropolitan at Farringdon-road, it became necessary to deepen the course of the main sewer, from about opposite St. Sepulchre's Church to the Fleet-ditch, in Holborn Valley. Instructions were consequently given by Mr. Haywood, the engineer to the City Sewers Commission, to Messrs. Mowlem, Burt, & Freeman, contractors for City sewers, to carry out the necessary works, the whole of which have been of a very critical character. The old sewer ran along the under surface of the street, with a gradual fall to the low level, in the ordinary way, by the force of its own gravitating flow, its mean depth being 10 feet; but the works in connexion with the extension of the Dover line necessitated its being made at a depth of 35 feet, in order that its course might be carried underneath the line of railway. In order to accomplish this object, it was found necessary to excavate the ground in Skinner-street nearly two-thirds of its length to the depth required, and to open an extensive cutting opposite Snow-hill and Seacoal-lane, 46 feet in length, 18 feet in width, and 35 feet deep, so as to construct the new egg-shaped sewer (6 feet by 3 feet 6 inches), and afterwards to put in the retaining walls of the railway upon the top of it, 10 feet in thickness. But having done this portion of the work, it was further necessary to cause a connexion to be made between that portion of the sewer which still continued at the eastern end at the higher level. This was effected by an engineering artifice—namely, by gradually altering the level of the sewer, and the construction of an underground flight of steps, twenty in number, for the purpose of breaking the rush of the sewage, especially in periods of heavy storms. The sewer is built of stock bricks in cement, and concreted all round to a considerable thickness. A vast deal of timber has been used in the work, and built in with it, where it remains, its value alone amounting to upwards of 1,200*l.* The contractors for these works are Messrs. Mowlem & Co.: Mr. John Burt is their principal clerk; Mr. Moreton, their foreman; and Mr. R. Lidstone, the clerk of works to the engineer to the Commissioners of Sewers.

TELEGRAPH ROUND THE WORLD.

THE proposed intercontinental telegraph which, *viâ* Behring's Straits, will complete the circuit of the world, was recently the subject of discussion in the New York Chamber of Commerce. It appears that Russia has undertaken a line of 6,000 miles, from Moscow to the Pacific Ocean, at the mouth of the Amoor, of which 4,000 miles, from Moscow to Irkutsk, are in operation, and that she has granted to Mr. P. M. Collins, of New York, a concession for thirty-three years to extend this line up to and across Behring's Straits, and then through her American territories to the frontier of the British possessions, a distance in all of 4,500 miles; that the British Government have granted a similar privilege down the northern frontier of the United States; and that an application is now pending in the Washington Congress for like permission, through that country; thus connecting the whole telegraphic system of Europe and Asia with the telegraphic system of America. The Chamber unanimously resolved to memorialize the president and both Houses of Congress in favour of the undertaking. The full completion of the project may, it is alleged, be expected within three years. The total distance overland by way of Behring's Straits, which are only 39 miles wide and 160 feet in depth, will be about 16,000 miles; but how the influence of the glaciers which must inevitably cross the path of the wire is to be obviated, it is hard to say. That glaciers rip up the ground whenever they reach shoal water is well known; and the wire *must* cross the shoals as well as the deeps. It is asserted that messages have been repeatedly sent during the present year from Boston to San Francisco, a distance of 3,000 miles, in two minutes.

FEATHER BEDS.

THE sanitary effects of the various materials used for beds is a subject which has been too little considered. The old-established institution, the feather-bed, has its comforts, and with those who have been long accustomed to it, it has become an actual necessity. In the Anglo-Saxon days warm beds were a desideratum in every well-arranged household; and since then, through the Mediæval Ages up to the present time, beds, bedsteads, and bed-furniture have been matters of importance in connexion with every household. The unwholesome curtains have now nearly gone out of use,—a change in fashion which is conducive to health; with those of the rising generation, the feather-bed is decidedly going out of favour; and, generally, the medical profession do not speak in its praise, and before long it is likely that feather-beds will be disused in the hospitals. By some good housewives the cases of the feather-beds are changed, at the least, once a year; the feathers which have massed together in lumps are separated, aired, and then placed in a clean covering. This is a wholesome method, but it is by no means an uncommon custom to leave the feathers in the same case unopened for many years together,—a practice which is very reprehensible. Besides the ill effects which may arise in this way, there is now an opinion, strongly expressed, that very soft and yielding couches are not good for health or proper muscular development, and are, therefore, improper for use in schools and places in which the youth of both sexes are reared. Up to the end of his life the Duke of Wellington slept on a hard narrow mattress; and others might be mentioned who have lived to an advanced age, who repudiated soft beds.

A variety of materials is used for the stuffing of beds. There are the sweetly-scented heather beds in Highland cottages, which when carefully and frequently renewed afford a pleasant resting-place for the weary traveller. In some parts, various species of the fern are employed for the same purpose. In some of the English regiments, the soldiers fill the bedticks with clean dry straw: this, when neatly put in regular layers, is said to make a comfortable and wholesome bed. The straw is changed once in a fortnight; and what has been put aside from the barrack-room can be used in the cavalry stables. In London, and other large towns, a material called "flock" is extensively used for stuffing beds. This should be often changed and cleansed. In many of the dwellings of the poor we have met with beds filled with wood-shavings: a filling of this kind for a bed can be had for about 4*d.*; and if the material is often renewed there is no harm in it: but, unfortunately, this is not done; and often these beds fall into shocking conditions. Horse-hair and spring mattresses have in many instances been substituted for feather-beds; and some have carried the liking of hard beds to such a degree as to sleep on flat boards: this, however, will not generally come up to the idea we have of a bed of roses.

As regards beds in a sanitary point of view, there can be no doubt that the use of feathers in excessive quantities is not beneficial to health; and that the materials used for stuffing should be frequently changed. Some have suggested that any substantial filling for beds may be done without altogether, by the use of gutta-percha bed-cases, filled with air. We have no estimate of the difference of cost between first-class feather-beds and those of gutta-percha which can be inflated; but in some respects, provided that the cost did not forbid it, air-beds filled to a proper consistency would have advantages.

WIDE TENDERS.

COMMENTING on a recent list of tenders for a church in Cambridgeshire, a correspondent, T. S. G., says:—"This competition illustrates the way in which a wide difference in the amounts of tenders sometimes occurs. The specification included some terra-cotta work modelled to the architect's designs. One builder was referred by the architect to the manufacturers for the price of this work, and was informed by them that it would be 457*l. net*, and that the same estimate had been given to the other builders. Another builder told me that the architect informed him that the cost, according to an estimate which he had obtained from another maker, would be about 287*l.*; a third firm, not receiving the promised information from the architect in time, stated in their tender the sum they had allowed for terra-cotta; and that, if the architect's estimate exceeded it, the difference, which proved to be about 140*l.*, was to be added to the amount of their tender. Now, if all these tenders were adjusted to the datum price of 287*l.* for terra-cotta (which would have the effect of adding 140*l.* to Messrs. Bullock's tender, and deducting 170*l.* from Mr. Grinson's, and similarly modifying the others), the amounts would approximate more closely, and would show that builders are not always so "blind" as they sometimes appear."

IMPROVEMENT OF ARCHITECTURAL COMPETITIONS.

SIR,—It would seem that a little interest has been aroused, or rather revived, in the almost forgotten question of competition reform. Fourteen years ago I remember being somewhat ardent about it myself. If your correspondent will look into the eighth volume of the *Builder*, he will find full particulars of such a congress of architects as he and Mr. Burges desire to convene.

A meeting was called by the Architectural Association; and a committee, consisting of its chairman (Mr. Godwin), Mr. Papworth, Mr. James Bell, Mr. Truefitt, and some half-dozen others, appointed. I believe it is STILL SITTING!

WILLIAM YOUNG.

PUBLIC PLEASURE-GROUNDS.

THE vote on Mr. Doulton's motion in the House of Commons is calculated to throw a gleam of consolation on the minds of those who have long mourned over the diminished means of public enjoyment of rural scenery, through the spread of inclosures, and of encroachments on rights of way. It seems as if Parliament, which for some years has been alive to the propriety of a considerable governmental expenditure upon new national pleasure-grounds, is at last awaking to the more economical plan of abstaining from giving away those to which we have possessed rights from time immemorial.

My present object is to suggest a middle course as regards economy in expenditure, towards the furtherance of public open-air recreation. Let it be imagined that a desirable plot, say of 100 acres of land, is offered to the notice of the public. It is desirable as a building speculation: it is desirable, also, as a national park. I say, let an architect or landscape gardener, on the part of the building speculator, lay out an appropriate plan in concert with the authorities of the Woods and Forests. Let Government purchase, not the freehold of the whole 100 acres, but the freehold of an intended public path, say 3 yards wide, suppose in a serpentine line; also the freehold of any remarkable site, or knoll, commanding a fine prospect, with the right of way thereto; also the freeholds of small plots adjacent to the above, where it shall have been considered desirable to plant clumps, or erect ornamental objects, as fountains or statues. Let covenants be entered into that the inclosure of the public path be no more than a light iron fence; that no brick wall be thrown up nearer to it than 100 yards; that the villas to be erected be of approved picturesque designs; &c., &c.

Now, considering that these covenants on behalf of the public need be but little more onerous to the purchasers of building plots than those to which, for their own sakes, they would be willing to subject each other; considering, also, that the requirements of the public might only entail the purchase of 5 or 10 acres of freehold, instead of the whole 100; I submit that I have pointed out a plan which, if less economical than the mere conservation of Epping Forest, is much more so than would be the establishment of another Victoria Park.

GEORGE MACKENZIE.

THE TENDERS FOR TOWER OF ST. JOHN'S, PUTNEY.

SIR,—In your last number, under the head of "Contracts," is an advertisement for tenders for erecting the tower and spire of St. John's Church, Putney; and in the list of tenders received are the several amounts of the builders who have recently been invited to tender, in limited competition, for the above work, and who sent in their estimates to Mr. Charles Lee, the architect.

In the year 1858, we gave an estimate, with others, for erecting St. John's Church, Putney, from quantities supplied by Mr. Lee, and the separate estimates for the tower and spire varied from 1,030*l.* to 800*l.*; our price being 1,013*l.* The church was built at that time, with the exception of the tower and spire; but not by us.

Being one of those builders selected again to tender for the tower and spire (in the limited competition above referred to) from the original drawings, and the quantities not being supplied, we employed a competent surveyor to take them out, and a discrepancy was found in the Bath and rag stone work alone between Mr. Lee's original quantities and those taken out by the surveyor amounting in value to the sum of 350*l.*; and in addition to this the stone staircase, although shown on the drawings, was altogether omitted in Mr. Lee's quantities.

We think it right that these facts should be made known to the building trade, as the architect has written a letter thanking us for our tender, and saying "that the committee, thinking all the tenders too high, have decided to put the matter to public competition;" and they have advertised accordingly for tenders, to be based on quantities supplied by Mr. Lee.

We have written to the building committee, informing them of the errors in the original quantities, which, with the rise in materials and labour, is sufficient to explain the great difference between our estimates of 1858 and 1864.

We shall feel greatly obliged by your inserting this letter in your next impression.

T. H. ADAMSON & SONS.

THE BUILDING TRADES MOVEMENT.

Leeds.—The new infirmary building operations have been suspended for a day or two, owing to the labourers having dictated ultra-union principles to the contractors. Fresh men were found to supply their places, however, and the works were proceeded with. The lock-out men have issued a statement and balance-sheet up to June 25. They deny the correctness of some statements that have been made showing that a large proportion of the men have returned to work. As to money matters, they say that the first week each man received 10*s.*; and each succeeding week 14*s.* They then continue:—"We have done everything that is fair and reasonable by way of securing a settlement of the present dispute. Deputations, in connexion with every work now locked out in the district, have repeatedly waited on their respective employers, but only to find themselves insulted by being told to give up the union and sign the document." They then appeal to the men of England, Scotland, and Wales, not to seek work in the Leeds district. The balance-sheet shows that the total amount received by the union during nine weeks of the strike, was 6,808*l.* 7*s.* 1*d.* Of this sum Gateshead had contributed 3,544*l.* 13*s.*; Brierley-hill, 2,770*l.*; West Bromwich, 350*l.*; public subscriptions from Leeds, 28*l.* 2*s.* 3*d.*; and other subscriptions amounting to upwards of 113*l.*, including subscriptions from Wolverhampton, Newcastle, and London. The total expenditure had been 6,746*l.*, which had been disbursed in payments to the men locked out, in the cost of sending three of their number to America, and in the railway fares of those leaving the district for work elsewhere.

Sheffield.—An employer gives, in last week's local *Independent*, the following as to the state of the joiners' strike. A considerable number of the most respectable part of their workmen have accepted and are at work on their employers' terms—that is, 1*s.* per week advance on the present rate of wages; to commence work on Monday morning at seven o'clock instead of six; overtime, two hours to be considered a quarter of a day. Many men are prevented from working owing to the picket system, by gangs of men being placed near some of the workshops, and many threats of intimidation are being made to prevent men resuming their work. The employers are determined to make no further concession, and say they are satisfied that the strike will soon terminate.

Carlisle.—The working cabinetmakers of this city, following the example of the joiners, have struck work for an advance of wages. Some weeks ago a turn-out on the part of the joiners was threatened if their wages were not advanced from 22*s.* to 24*s.* per week. Meetings of masters and men were held, and the result was that those of the men who were considered worth the advance obtained it. It seems, however, that in some shops the joiners have been working in the double capacity of joiners and cabinetmakers, and these have now come out along with those whose trade is cabinetmaking alone. The rate of wages now demanded by the cabinetmakers as a body, is 25*s.* per week. It appears that at this season the masters have more orders in hand than they can execute; and the men, knowing this, have taken advantage of the opportunity to enforce their claim. The largest employers determined to resist the demand of their men, and consequently a considerable number of the trade are now walking about on strike.

Outrage by Brickmakers.—A party of working brickmakers have visited Mr. A. Ashworth's brickcroft, which is behind the Infantry Barracks, Manchester, and destroyed about 90,000 bricks. The bricks were wet from the mould, and were on the drying floors. The bricks being in an unfinished state, the damage caused is comparatively trifling. Mr. Ashworth employs a large number of men connected with the union, and is also an employer generally respected by his workmen.

FROM SCOTLAND.

Edinburgh.—The foundation-stone of the College "munificently endowed" by the late Sir William Fettes (who, by the bye, is said to have left his daughter to starve while doing so) has been laid at Comely Bank, in presence of a numerous and brilliant assemblage, amongst whom, we dare say, Sir William's daughter would not be seen. Mr. David Bryce is the architect, and the following is a list of the contractors for the works:—Excavating, Mr. J. M'Donald, Edinburgh; mason work, Mr. A. Morrison, Edinburgh; stone carving, Mr. W. Pearce, Edinburgh; carpenter and joiners' work, Messrs. Beattie & Sons, Edinburgh; iron work, Messrs. Tod & Son, Edinburgh; plumbers' work, Mr. M. Carstairs, Edinburgh; plasterers' work, Mr. J. Annan, Edinburgh; slaters' work, Mr. T. Crombie, Fife. Mr. Kay is clerk of the works. In the evening the trustees entertained a select party at dinner in the Douglas Hotel. The contractors were entertained at dinner in the Crown Hotel, and a suitable entertainment was also provided by the trustees for all the workmen engaged in the works.

Leith.—The description of house property most in demand in Leith, according to the *Scotsman*, is first-class dwelling-houses, and also working-class dwellings at rents of 5*l.* to 8*l.* Ranges of large warehouses and lofts are in request, but more shops and offices are not now wanted. The cost of erecting new buildings is much the same as last year, when there was a great deal of building going on in and about Leith, including 334 dwelling-houses of different kinds.

Innerleithen.—A few new buildings have been put up here this season, and a few more are in course of erection. At the west end of the village a new police office, with cells and house accommodation for two policemen with their families, is in course of construction. Various cottages and other houses also have been built or are in course of erection.

Brechin.—The building in Swan-street for the Royal Bank of Scotland is expected shortly to be opened for business. The site forms the junction of Swan-street and Clerk-street. The building is about square, with four elevations, and is two stories in height, with attics. The windows in the principal front are divided by circular columns with carved capitals. At the angles of the building spiral columns are introduced, with carved capitals. A deep polished belt goes round the eaves, with heavy moulded cast-iron rhones, supported on ornamental brackets. The roof is square in form, with a platform flanked with ornamental cast-iron finials. The designs were furnished and carried out by Messrs. Peddie & Kinnear, of Edinburgh. The carving, which is natural foliage, arranged conventionally, was executed by Mr. Roddis, of London. Local contractors executed the work.

Dundee.—A fountain has been procured by Messrs. Nicoll for Sir David Baxter, to be placed in the Baxter Park. It is to be erected on the north or back wall of the pavilion. The water flows from a font of Sicilian marble, carved into the shape of a shell, and surrounding it are

various emblematical representations. On the right side is a modelled figure of Moses with rod in hand, as if preparing to strike the rock; and on the left side is represented a Jewess holding the cup to the lips of her young child, while immediately above is the inscription from which the design is taken.—"He opened the rock, and the waters gushed out: they ran in the dry places like a river." The fountain, including the pedestal, will stand 6 feet high, and is 4½ feet in breadth. The whole of the work, except the font, is of cast iron in imitation of bronze, and is from the Coalbrookdale Iron Works.

Perth.—An artesian well is being bored at the dye works in Mill-street. Water has been found at a depth of 270 feet, and has risen to within 6 feet or 7 feet of the surface. Operations were still being prosecuted, in the hope that the spring would rise to a higher level.

Auchtermuchty.—At a meeting of shareholders in a projected new town-hall on Tuesday last, it was stated that fully three hundred shares had been already taken, about one-half of the number being by parties non-resident in the district. It was decided that it should be raised on a site at the south side of the town.

IRELAND.

Dublin.—At the head of Cavendish-row, one side of Rutland-square, and presenting a flank to North Frederick-street, on the finest site for a structure of the kind in this city, a new Presbyterian church approaches completion. This, which we may consider the metropolitan of the Presbyterian church in Ireland, is intended for the accommodation of the congregation now attending the dingy old meeting-house in Mary's Abbey, about 800 in number, and is presented to them through the munificence of Mr. A. Findlater, one of the great merchants of Ireland: the cost of the whole will, on its completion, be about 12,000*l.* It consists of a nave about 60 feet long by 30 feet wide, separated on each side by an arcade of three lofty arches, from aisles 15 feet in width; these aisles having in the several bays formed by the arches much the character of so many transepts, the ends of which, on one side alone, as the church abutting against adjoining dwelling-houses cannot obtain light from the other side, are filled with large traceried windows, with a considerable admixture of English and French Gothic details. In the front facing the square, above an arcade with small cusped-headed single lights, the gable is filled with a traceried window, occupied by a stained-glass device, forming a memorial to Mr. Findlater, the donor of the church. This window is the gift of the congregation. The remaining light is obtained by a rose-window, set high in the back wall of the recess, which in Congregational churches generally stands for the chancel. The vestry and committee-room form a separate building running across the rear of the church, and presenting a gable-end to Frederick-street, ornamented by pointed windows. Between the gables on this flank buttresses support lofty but somewhat too slender pinnacles which form a decorative feature of no mean order, yet suggest an idea of insecurity. The roofs are of high pitch, and inside the timbers are stained to a deep walnut tint. The principals rest on slender pillars of Caen stone, on which, in capitals and bands, is lavished a large amount of carving. The style of the building is English Gothic of the Middle Decorated period: considerable licence is taken, however, to introduce north French details. The result will not bear critical examination. The interior is more successful, the great height of the aisle, piers, and arches giving an effect seldom obtained in churches of this character. The architect is Mr. A. Heiton, of Perth; the builder, Mr. Samuel H. Bolton, of Dublin.

Bonmahon, County Waterford.—A coast-guard station is about to be erected at Bonmahon, in the county of Waterford, to accommodate one chief officer and six boatmen, and is provided with a watch-tower and boat-house. The plans were prepared at the Office of Public Works, Ireland, under the direction of their architect, Mr. James H. Owen.

New Castle, County Limerick.—A branch establishment of the National Banking Company is about to be erected in New Castle, county Limerick, which, besides giving good accommodation, will have somewhat of a decorative character. The style is Classic. The probable cost is about 2,000*l.* Mr. W. F. Caldbeck is the architect.

CHURCH-BUILDING NEWS.

Happisburgh (Norfolk).—The church here has recently been restored, both internally and externally. Before the restoration, the building, which is of the Perpendicular style of the fourteenth century, was in a sad state of decay, the whole of the timbers and lead-covering of the roofs being so unsound as to be past reparation. New roofs have, therefore, been substituted, of stained red deal: the whole of the aisle and clerestory windows (many of which were previously blocked up with brickwork) have been entirely renovated and reglazed: two of the tower light windows, which were unsafe, have been renewed; and several of the buttresses rebuilt, and the walls repaired. In the interior, the columns and arches have had the whitewash removed; the stonework has been repaired; and the whole of the walls restuccoed. The old box pews have been replaced by open deal benches of modern design: the pulpit and reading-desk are executed in oak, the former having a stone base: the old font having been restored, cleansed of paint, and the carving recut, is refixed on new stone steps; and the aisles and passages have been paved in a pattern, with the red and white tiles of the neighbourhood. The gallery in the tower has been removed, and a new belfry floor has been fixed in the tower, so that the west window and door (which have been renovated) are no longer hidden from view. The works have been carried out by Mr. R. Burton, of Paston, builder, from the designs and under the superintendence of Mr. J. H. Brown, of Norwich, architect. Mr. Moore, of North Walsham, was the contractor for the stonework; with the exception of the windows and font, which were executed by Mr. R. Rust, of Norwich. Mr. Wm. Storey, of Bacton, was the plumber and glazier. The chancel has been entirely restored under the direction of the Ecclesiastical Commissioners, the rectory being vested in the Bishop of Norwich, through their architect, Mr. E. Christian, of London: a new roof has been supplied; a new window of stone fixed to the east; and the two wooden windows to the south, replaced by stone ones; the buttresses rebuilt, and the flint-work of the walls restored and pointed, replastered internally, and a new door opened to the south. The works have been carried out by Mr. R. Rust, of Norwich.

Stowmarket.—At a meeting of the parishioners held to consider the subject of restoring the parish church, it was stated that Mr. Phipson had prepared a plan, which had been left open for builders to see, and four estimates had been received: one was 1,900*l.*; the second, 1,670*l.*; the third, by Stowmarket builders, 1,550*l.*; and a fourth, 1,541*l.* The one from the town they hoped to accept, and thus have the work done at home. To set about the work properly about 2,000*l.* would be required, and the way was clear for 1,000*l.* Mr. Phipson then explained his plans, and a resolution favourable to the object in view was passed.

Slawston (Leicestershire).—The church here is to be restored and repewed, and the whole of the fittings will be new. The tower arch is to be opened, a new porch to be built on the south side, the nave, aisles, and chancel to have new roofs, and a new east window in chancel. The plans have been prepared by Messrs. Goddard & Son, of Leicester, architects. Mr. Loveday's tender has been accepted, that for the church being 559*l.*, and for the chancel 198*l.*

Bristol. — The restoration of St. Stephen's church is now proceeding. The wall and roof of the south aisle have been pulled down, and are now being re-erected. The south aisle will be rebuilt of Pennant stone, with three-light windows, which will be more in character with those in the tower. This aisle will also be lowered from its former height, in order to show the whole of the clerestory windows of the nave. The clerestory itself will present a new face of Bath stone, and its windows will follow the pattern of the ancient ones. An extension of the north aisle will be made eastward, upon old foundations, for the purpose of removing the organ and its gallery, so that a number of new seats may be put in the west part of the church unencumbered by these obstructions. The architects are Messrs. Fripp & Ponton. The church requires much additional restoration, and funds are solicited for that object.

Manchester.—The ceremony of laying the corner-stone of the new tower of Manchester Cathedral will probably take place in the course of July. It is hoped that the Prince of Wales may be induced to officiate on the occasion.

DISSENTING CHURCH-BUILDING NEWS.

Southwark.—The memorial (Congregational) church for the Pilgrim Fathers was begun in 1856, the stone having been laid on the 29th of May of that year, the anniversary of the martyrdom of Penry in 1596. Mr. Pouget, architect, provided the design, and Mr. W. Downs was the builder. There is accommodation, without any galleries, for about 530 persons. The original design was more extensive, and richer in its character, but adverse circumstances prevented its progress; and, with the exception of the pilgrim hall, completed some years past, the building remained in its normal state; but recently a few gentlemen interested in the edifice having determined to carry it out to a completion, although under very altered features, the work was again proceeded with; and on the 25th of May of this year it was opened for public service. The interior dimensions are as follows:—86 feet by 40 feet from the front wall to the reredos, and 48 feet in height to the ridge: the hall or gallery behind the same is 56 feet long, and is completed in some measure approaching to the character of work originally intended. The style is Gothic, and essentially of the Decorated period. The roof is hammer-beam, and sufficiently lofty to admit of galleries at some future time. The windows, including the chancel window, have been executed in terra-cotta by Mr. M. H. Blanchard, whom the architect has long employed in this department. The lighting was executed by Mr. J. C. Sharp. The pulpit is to be from a subscription now progressing in Wales and other places, and is to be also commemorative in its character of the same objects. The warming has been executed by Mr. J. Lewal, engineer.

Croydon.—The Trinity Congregational chapel, Dingwall-road, Croydon,—Mr. Pouget, architect, Great St. Helen's, and Messrs. Nicholson & Sons, builders, Wandsworth,—gives accommodation, without side galleries, to about 730 persons. The edifice is essentially Italian. Its interior measurements are 48 feet 6 inches in width, 85 feet 6 inches in length from front wall to reredos, and 37 feet in height to the central ridge. The roof is in three divisions, with wrought moulded trusses. The chief feature of the interior arrangements is that there are neither arches nor columns to sustain the roof at the division of the nave and aisles, but longitudinal girders, ornamented with cornices and enriched spandrels, superseding the necessity of any supports constituting hindrances to the sight and hearing. The whole of the windows are executed in terra-cotta by Mr. Blanchard, of Blackfriars-road, and are fully or partially illuminated in stained glass, from the designs of Mr. Wailes, of Newcastle-on-Tyne. The seats are open. The exterior is composed of a pediment with large central window, surmounted by the cross, and the wings by two campanile towers. The warming and lighting were executed by Mr. J. C. Sharp.

Alford (Lincolnshire).—The Wesleyans of this town are about to erect a new chapel, with a considerable frontage to West-street. The building is to be in the Decorated style, from a design by Mr. W. Botterill, of Hull, architect. Accommodation will be provided for about 700 persons. The works have been let, by private contract, to Messrs. Hasnip & White, of Alford, and the cost will be about 3,000*l.*

Northallerton. — The foundation-stone of a Wesleyan chapel has been laid here. The site of Wesley Chapel, as it will be called, is one of the best in the town, and cost, with the buildings erected thereon, 600*l.*, being the ground for many years occupied by the Pack Horse Inn, on the east side of Northallerton. The style of architecture will be Gothic, without much ornament. It will be built a few yards from the front of the town street. The external length of the chapel and vestry will be 80 feet, and the external width, including buttresses, 36 feet; and the building is calculated to accommodate 450 persons. Messrs. Wilson & Crosland, of Sheffield, are the architects, and the following are the builders:—Messrs. A. Peacock & Sons, bricklayers and plasterers; Mr. Thos. Thompson, joiner; Mr. John Metcalfe, stone-mason; Mr. W. Swain, plumber and glazier; Mr. Jas. Naylor, worker in wrought-iron; and Messrs. Cooper & Son, painters, all of Northallerton; Mr. Wm. Walker, ironfounder, York; and Mr. John Baynes, slater, Ripon. The contracts amounted altogether to 1,183*l.* 5s. 6d. The cost of the chapel and Sunday school which is intended to be built, including the site, will be about 2,000*l.*, towards which about 1,100*l.* have been given.

Books Received.

Society of Engineers. Transactions for 1863. London: Spon.

THIS society deserves to be better known than it yet is. The place of meeting is in the lower hall of Exeter Hall, Strand. Mr. C. L. Light is the chairman, and Mr. A. Williams the honorary secretary and treasurer. The present volume is well got up, and the contents are illustrated by numerous plates. There are papers on "Steam Boilers," by P. F. Nursey; on "The Relation between the Safe Load and the Ultimate Strength of Iron," by Zerah Colburn; on "The Construction of Chelsea Bridge," by G. G. Page (already given in the *Builder*); on "The Bombay, Baroda, and Central India Railway" (of which we have also given some account), by C. Saunderson; on "Signalling, for Land and Naval Purposes," by F. Wise; on "Steam Navigation on the Indus," by A. Warren; and on "Steam Fire-engines, and the late Trials at the Crystal Palace," by W. Roberts.

VARIORUM.

"Memoirs of the distinguished Men of Science of Great Britain, living in the years 1807-8. By W. Walker, jun. Second edition. London: Spon." These brief memoirs were originally compiled for the purpose of accompanying an engraving of distinguished men assembled at the Royal Institution. Though a compilation, the work is neatly done; and, as remarked by Mr. R. Hunt, F.R.S., in the introduction, which is written by him, "the influences of human *thought* on the physical forces which regulate the great phenomena of the universe,—and the operation of the powers of the mind on the material constituents of the planet which is man's abiding-place, form subjects, for studies, which have a most exalting tendency." Men of thought are the true rulers of the world, and their memoirs have an abiding interest for all their loyal subjects.——We can now only briefly mention, amongst other books to be hereafter spoken of, "Cottage Construction and Design," by C. W. Strickland (Macmillan); "The Grammar of House Planning," by an M. S. A. and M. R. A. S. (Fullarton & Co.); Jeays on the "Orthogonal System of Hand-railing" (Simpkin, Marshall, & Co.); and "The Church and Fortress of Dover Castle," by the Rev. John Puckle (J. H. & J. Parker).

Miscellanea.

THE SAVOY CHURCH, STRAND.—This ancient structure has been again ravaged by fire.

ARCHITECTURAL ALLIANCE.—The annual meeting of delegates was opened at the House, in Conduit-street, on Wednesday last, Mr. T. Roger Smith in the chair.

CULTIVATION OF WINDOW FLOWERS.—A society has recently been established in Nottingham, to encourage the cultivation of window flowers and plants, more particularly in the neighbourhood of Narrow Marsh.

GAS.—The managers of the Brighton Gas Companies have determined to reduce the price of gas to private consumers to 4s. 9d. per 1,000 feet, instead of 5s., as heretofore. It is proposed to still further reduce the price to 4s. 6d. per 1,000 feet next year.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.—On Thursday, the 30th ult., Mr. W. Cave Thomas read a lecture on "Metronomy; the Quantitative Analysis of Phenomena, and Demonstration of the Measure of the Ideal." We shall return to it.

GIFT TO THE SOUTH KENSINGTON MUSEUM.—A curious collection of objects has lately been presented to the South Kensington Museum, by the Rev. R. Brooke, of Gateforth Hall, Selby, consisting of numerous objects of the sixteenth, seventeenth, and eighteenth centuries, used and preserved in the families of Brooke and Osbaldistone, which will enrich several of the divisions of the museum. Amongst the objects thus acquired by the nation, are a unique collection of posy rings, watches, canes, costumes, and court dresses, besides a miscellaneous collection of nicknacks, which our great grandfathers and great grandmothers used in their domestic life.

WILTS COUNTY SURVEYOR.—Mr. H. Weaver was last week elected to the office of county surveyor by the magistrates: there were two candidates proposed,—viz., Mr. Weaver, of Devizes, and Mr. Bothams, of Salisbury.

VENDOR AND PURCHASER.—Vice-Chancellor Kindersley lately held, in the case of Poole *v.* Adams, that where a house under a contract for sale, having been insured against damage by fire, is burnt down after signing of the contract, but before completion of the purchase, the purchaser is not entitled to the benefit of the insurance, in the absence of any express stipulation to that effect contained in the agreement.

DAMAGES FOR SCAFFOLDING ACCIDENT.—The case of Miss Crawford, against the Dublin Corporation, as to an accident which occurred to that lady, in March, last year, while passing through Westmoreland-street, where some scaffolding had been erected by order of the Corporation, has been brought to a conclusion. The damages were laid at 2,000*l.*, but by consent of counsel a verdict of 1,400*l.* was recorded in favour of the plaintiff.

THE CITY CROSS, WINCHESTER.—This erection and its scaffolding, which, says a Hampshire paper, is a nuisance as it now remains, and a monument of disgraceful delay, will shortly be brought under the discussion of the committee, who have received a letter at last from the architect, in which it is stated that the sum required for the restoration is 500*l.* Other expenses will bring this amount up to 600*l.*, nearly 300*l.* of which remain to be raised.

ELECTION OF PRESIDENT OF THE ROYAL SCOTTISH ACADEMY.—At an adjourned meeting of the Royal Scottish Academy, Mr. George Harvey was elected President, in room of the late Sir John Watson Gordon. There were two candidates proposed—Mr. Harvey and Mr. Graham Gilbert. The former was nominated and seconded by Mr. Noel Paton and Mr. Horatio M'Culloch—the latter by Mr. John Steell and Mr. David Bryce. On a division, seven members voted for each of the gentlemen proposed, and the election was carried by the casting vote of the chairman, Mr. Lees, in Mr. Harvey's favour.

NATIONAL ASSOCIATION FOR THE PROMOTION OF SOCIAL SCIENCE.—The annual dinner of this society (with which is now associated the Society for Promoting the Amendment of the Law) took place at the Ship, Greenwich, on Saturday evening, the 2nd instant. The president (Lord Brougham) occupied the chair, and discharged the duties of the position with all the vigour of former days. The common serjeant, Mr. Jas. Heywood, Mr. Westlake, Mr. Hastings, Mr. McQueen, Mr. T. Webster, and others spoke to various toasts, and the evening was passed very agreeably.

THE COURTS OF JUSTICE BUILDING.—The Attorney-General has at last asked and obtained leave to bring in a Bill to supply means towards defraying the expenses of providing courts of justice, and the various offices belonging thereto, and for other purposes; and Mr. Cowper to bring in a Bill to enable the Commissioners of Works to acquire a site for the erection of the courts of justice, &c. This Bill has been prepared to permit the purchase of what is known as the Carey-street site,—that is, of the area bounded on the north by Carey-street and Yeates-street, on the south-west by Clement's-inn, on the south by the Strand, and on the east by Bell-yard. Taking it altogether, this locality is probably open to fewer objections than any other. It may, moreover, be made accessible by subways from the lower levels of the Temple, or by a bridge across Fleet-street at Temple-bar. "The building known as Temple-bar" is specially protected by the fourth clause of the Site Bill, but only so far as to prevent it being purchased, taken, or used without the consent of the Lord Mayor, Aldermen, and Common Council. It is a further recommendation of this site that it is at present covered with alleys and courts, the demolition of which would be a blessing. All the preliminary steps for securing this plot of land appear to have been taken already. The owners, lessees, and occupiers have been duly served with notices. Questions of disputed compensation are to be determined by a jury in the Lord Mayor's Court; but the rights of the Metropolitan Board of Works and of the Commission of Sewers are expressly reserved.

THE HOLBORN VALLEY IMPROVEMENT.—The Holborn Valley Improvement Act has passed, and received the Royal assent on the 23rd of June. The Act has been referred to the City Improvement Committee to carry it into execution, and to confer from time to time with the Coal, Corn, and Finance Committee as to how the funds should be raised for the purpose.

THE IRON TRADE.—*Rylands' Iron Trade Circular* says that the preliminary meeting of the iron masters was more than ordinarily attended, and the discussion was exceedingly animated. The question of certain members of the trade having undersold was prominently brought forward, and it was urged that foreigners are admitted into the market at present rates in a manner disadvantageous to the leading houses and the future prospects of the trade. The call in Wales last week showed a rise. Some orders have been already refused at late prices. Marked South Staffordshire iron stands as before at 9*l.* 10s. per ton. There has been a little more inquiry in the pig-iron market, yet no advance can be obtained, although quotations are made a shade upwards. The movement in the Scotch iron market has resulted in an upward tendency in pigs. All other prices remain as before.

CANNON STREET STATION HOTEL.—This hotel will be built over the booking-offices of the railway. It will front Cannon-street, and have Dowgate hill for its western boundary. The station will be thrown back a distance of 80 feet from Cannon-street, the space in front being left open as a forecourt, similar to the plan of the Charing-cross Station. The hotel, with the station, will be in the Italian style, treated somewhat after the manner of the Renaissance, with high roof and towers at each end of the building. The building, which is to consist of four stories and an attic-floor, will be constructed of white brick, relieved with dressings of terra-cotta, cement, and stone. The great feature of the interior will be a hall, 100 feet in length, 40 feet in width, and 40 feet in height. The designs of the hotel and the arrangements of the booking-offices have been prepared by Mr. E. M. Barry.

RESTORATION AT LINCOLN CATHEDRAL.—A correspondent writes: "Unless I am very much mistaken, the very ancient *bas relief*, which stood in the wall on the north or left-hand side of the doorway, on a level with the kings, has been removed, and its place filled up with plain masonry. The Chapter of course employs an architect, whose talent and skill and taste are sufficiently undoubted, or they would not allow him to meddle with the splendid building of which they have the charge. But, with all deference to this authority, I cannot but think all lovers of old art will regret that he has "restored" this *bas relief* completely out of sight. It is one of a series probably of Saxon works which appear to have been taken from some other church and used by the Norman builders with tender regard for the hands that wrought them. It is reserved for us to replace these monuments of art, older than the Cathedral itself, by masonry, which, however excellent it may be to the builder's eye, is not an object of much general interest. If this sculpture was too decayed to be cleaned, as the one on the opposite wall has been, why, in the name of patience, could the mason not have left it alone?"

HEREFORD CATHEDRAL ORGAN.—This organ has been remodelled and enlarged by Messrs. Grey & Davison, under the superintendence of the Rev. Sir F. Gore Ouseley, bart. The organ now stands under the first arch on the south side of the choir, projecting also over the stalls in front of the triforium, the pipes being supported by ornamental wrought-iron work, and diapered in gold and colour. The position in which the organ has been placed will not admit of its use at the triennial festivals, as it has been determined to alter the arrangement which has hitherto prevailed, and to erect the orchestra at the western end of the nave. There will thus be an unbroken view of the whole of the cathedral, from the nave to the Lady Chapel, which could not have been afforded by adherence to the plan of erecting the orchestra at the eastern end of the nave. The effect of the sound is said to be very grand in every part of the building—the faintest note being distinctly heard in the remotest corners. The cost will be about 1,300*l.*, towards which nearly one-half has been raised by subscription.

BEDS. ARCHÆOLOGICAL AND ARCHITECTURAL SOCIETY.—The annual meeting of this society was held in the lecture-room of the Working Men's Institute at Bedford. Mr. J. Harvey, of Ickwell Bury, presided. The objects exhibited consisted chiefly of urns, shield-bosses, spear-heads, knives, and other Saxon antiquities. The chairman said he regretted the small attendance. The Rev. E. Trollope read a paper on the Fens and Submarine Forests of the Eastern Part of England; Mr. Wyatt one on Nuremberg Tokens; and the Rev. S. E. Fitch one on the Saxon Remains discovered at Kempston.

WORCESTER DIOCESAN ARCHITECTURAL SOCIETY. The first excursion of this society for the present season took place on Tuesday in last week, when between twenty and thirty of the members and their friends assembled at the society's rooms, Foregate-street, and proceeded to Holt church. The principal architectural and ecclesiological objects were pointed out, and a few historical particulars connected with the parish related by Mr. Severn Walker, who also officiated in like manner at the other churches included in the day's proceedings. The old castle, with its terraced gardens, was next visited, and here Mr. Pickernell provided luncheon. The party then went on to Shrawley church, and thence to Astley, returning to Holt Fleet, where upwards of thirty ladies and gentlemen sat down to dinner, under the presidency of the Rev. D. Melville, Mr. S. Walker occupying the vice-chair. A move was afterwards made for Grimley church, which having been duly examined, the party returned to Worcester.

CONGRESS OF BRITISH ARCHÆOLOGICAL ASSOCIATION.—The 21st annual meeting will be held in Ipswich from August 8th to the 13th inclusive, under the presidency of Mr. George Tomline, M.P., F.S.A. The programme includes,—August 8. Reception by the Mayor and Corporation.—President's Address.—Examination of some of the Antiquities of Ipswich, under the guidance of Mr. Phipson.—Evening Meeting at the Assembly Rooms for Papers and Discussion. Aug. 9. Excursion to Bury St. Edmunds.—Reception at the Guildhall.—Examination, under the guidance of Mr. Tymms and Mr. Gordon Hills, of St. Mary's Church—The Norman Tower St. James's Church—The Abbey Gateway, &c.—Departure for Hengrave Hall and Church.—Thence to Risby and Little Saxham.—Papers in evening. Excursion to Sudbury.—Thence to Long Melford.—Lavenham and Hadleigh.—Little Wenham Hall and Church.—Concluding Meeting in Evening.

DISCOVERY OF ROMAN REMAINS AT CHEDWORTH.—About two years ago, Thomas Margetts, a gamekeeper on the estate of Lord Eldon, at Chedworth, noticed in a rabbit-warren a small portion of Roman pavement, but at the time did not consider it of sufficient moment to call attention to it. A few days ago, however, he observed that the soil had been still further removed by the rabbits, and that a large portion of the pavement was exposed to view. He communicated the facts to Mr. Farr, one of his lordship's trustees, who immediately ordered excavations to be made, which have resulted in the discovery of three distinct rooms, the floors of which are in a beautiful state of preservation. One of the rooms measures 36 feet long by 19½ feet wide, and the design of the pavement consists of a vase and flowers, surrounded by a border. The representation of a man holding in his hand a hare or leveret is clearly brought out. In another room, not quite so large as the first, is the figure of a youth holding in one hand a bird, and in the other a buck's horn; while in the third room a font has been discovered, which leads to the presumption that the building has been used by the Romans as a place of worship. The workmen are still actively engaged.

RAILWAY MATTERS.—The masonry work in connexion with the erection of the railway bridge across the Mersey at Runcorn is progressing on both sides of the river. On the Cheshire side, the main abutment presents a solid mass of masonry some 25 feet high, and the masonry on the snig rocks on the Lancashire side will shortly be above high-water mark.——Respecting the arrangements made for the journey of the Emperor and Empress of Russia to Potsdam, the *Morning Post* says,—"We learn that the imperial train which conveyed their majesties from St. Petersburg consisted of twelve saloon and ordinary carriages, all of which were fitted up with the utmost attention to comfort and convenience, and included a kitchen, a billiard-room, sleeping chambers, &c. The great luxury of the imperial journeys, the terrace carriage with balconies, which is splendidly ornamented, it was necessary to leave behind, as with it the train would have been too long."——As railways will play a considerable part in the wars of the future, there is said to be an intention to add to the engineer corps in the armies of America sections of working mechanicians, for disabling the railways and locomotives of the enemy, and for repairing those which the opposing army has disabled.——The traffic receipts of railways in the United Kingdom amounted, for the week ending the 18th of June, on 11,308 miles, to 651,395*l.*; and, for the corresponding week of last year, on 10,849 miles, to 585,473*l.*, showing an increase of 459 miles and of 65,922*l.* in the receipts.

ARCHITECTURAL ASSOCIATION VOLUNTARY EXAMINATION CLASS.—Members are informed that the class will meet on Tuesday evenings in future; and on Tuesday next, the 12th July, Mr. J. W. Penfold will resume his paper "On Valuations."

TO CONTRACTORS, QUARRY OWNERS, MINERS, &c.
BLAKE'S STONE BREAKER is recommended by the best Engineers in this and other countries to Break Stone of every description, of the best quality for Macadam Roads, Concrete, Ballasting Railways, &c. It takes in large blocks or round boulders, and reduces them to fine road metal, at a cost of from 2d. to 3d. per ton. If your pauper labourer costs 3d. per day, this machine will do more work, and do it better, at 2d.—For circular testimonials, &c. apply to
H. R. MARSDEN,
SOHO FOUNDRY, LEEDS.

PARQUETS SOLIDAIRES.—HOWARD & SONS, 25 and 27, Berners-street, are prepared to supply machine-made patented solid PARQUET FLOORS 50 per cent. cheaper than they have been yet offered.—Illustrated catalogues, plans, and estimates free.

PARQUET FLOORING.
TO ARCHITECTS AND BUILDERS.
JACKSON & GRAHAM
Are the sole Agents in England for the superior PARQUET FLOORINGS manufactured by ANTON BEMBE, of MAYENCE & COLOGNE, for which a prize medal was awarded in the International Exhibition of 1862.—Books of designs sent free by post. No charge for taking plans and giving estimates.
33, 34, 35, 37, and 38, OXFORD STREET, LONDON.

ARROWSMITH'S SOLID PARQUET FLOORS.—A SOLID INTERLACED OAK PARQUET FLOOR at 2s. per foot (including fixing), the same price as a plain oak floor. The speciality consists in each separate piece being solid inch thick, grooved, and tongued, and keyed at back (not veneered). References to works done for the eminent architects, Messrs. W. Burn, D. Brandon, P. C. Hardwick, G. G. Scott, A. Salvin, Sydney Smirke, and others, during the last ten years. Show-rooms, 80, New Bond-street, W.

MEDIÆVAL PAPERHANGINGS, from the Thirteenth to the Sixteenth Centuries. Designed by G. T. ROBINSON, F.R.I.B.A. Manufactured by
WM. WOOLLAMS & CO. 110, HIGH STREET, near Manchester-square, London, W. May be obtained of the principal Decorators.
Extracts from notices in the undermentioned publications:—
"Conventionalized patterns, often displaying great beauty of form, characterize the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Athenæum.*
"The designs are exceedingly elegant, and the colours good and well arranged. Some of the patterns are of strictly ecclesiastical character, suitable for mission churches and oratories, or they may be used as accessories in church decoration."—*Church Builder.*
"The majority of the patterns are exceedingly satisfactory, and not expensive."—*Builder.*
"These designs are infinitely varied, yet always consistent and effective; the colouring is pre-eminently good, both in the selection of tints, and in harmonious combinations; and the quality of the paper is of the highest order."—*Art Journal.*

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.

DESACHY'S FIBROUS PLASTER.
GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.
It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c., for the linings of walls and ceilings, and for all purposes of ornamental plaster.
The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.
SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

NEW LIST OF PLAIN AND ORNAMENTAL WINDOW-GLASS, COLOURS, &c.

See Advertisement first Saturday in the Month, or on application.

87, BISHOPSGATE STREET WITHOUT, LONDON, E.C.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. This is sold under the name of "Improved Zinc Paint," or in the number Two or Three qualities. No workman can produce good work with such stuff. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASE IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

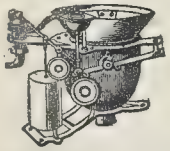
INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to



DOULTON & WATTS, LAMBETH POTTERY,

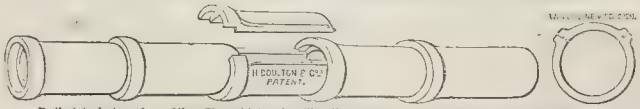
LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

THOMAS LAMBERT & SON,



Self-Regulating Pan Closet. Lambert's Ball Valve. High-Pressure Bib and Stop Valve.

PATENTEES and MANUFACTURERS, SHORT STREET, NEW CUT, LAMBETH.

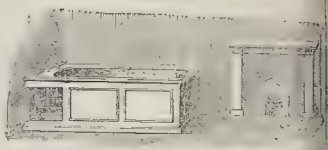
T. L. & SON find it necessary to state that their manufactures have their NAME legibly marked thereon.

DOULTON'S PATENT OPERCULAR PIPES.

By the introduction of one of these Pipes, at intervals, with ordinary Socket Pipes, Drains can be examined and cleansed. The Cover, being fired in one piece with the Pipe, fits perfectly. There are no imperfect joints, or complication of parts.

Manufactured by HENRY DOULTON & CO. LAMBETH.

MANUFACTORIES—LAMBETH, LONDON; SMETHWICK, near Birmingham; and ROWLEY REGIS, STAFFORDSHIRE.

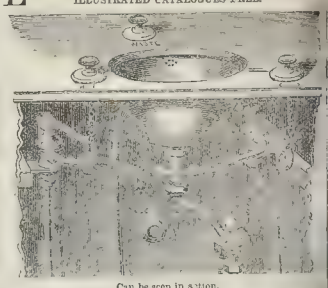


J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve. Pan.

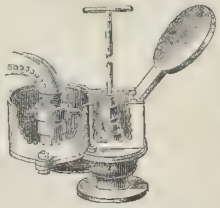
The Regulator Valve gives perfect control over the supply of water to each closet, so that however small the fall of water, it must flush and is inserted. Any number can be worked by one supply pipe. No intervening valves, cranks, or wires required. Pan Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

J. TYLOR & SONS' PATENT BATH APPARATUS.



The bath and boiler may be fixed in the same or separate rooms anywhere below the level of cold water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.

Estimates given from architects' drawings, or by inspection of buildings.



Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

LAVATORY APPARATUS. ILLUSTRATED CATALOGUES FREE.

Can be seen in action.

TO BRICKMAKERS.—SUFFOLK BRICKS.—TO BE SOLD by AUCTION, by

MESSRS. ROLFE & WHEELER, at the FOUR SWANS HOTEL, Sudbury, on FRIDAY, the 15th day of JULY, 1864 at THREE for FOUR o'clock in the afternoon, a first-rate BUSINESS PROPERTY known as the "Brick and Pottery Works," situate in the parish of St. Gomard, near Sudbury, in the County of Suffolk, on which large and lucrative business is carried on for many years, and is now in the occupation, and in the sole possession at the death of its late proprietor, Mr. Jno. Turner. The Property consists of a comfortable residence, about 3½ acres of land, containing an abundant inexhaustible supply of the finest White Brick Earth which, upon reasonable terms, may be had in the County of Suffolk. It is situate in almost immediate proximity with both rail and water conveyance, and offers to capitalists, either for occupation or investment, an opportunity rarely to be met with. For further and conditions of sale may be obtained of ROBERT RANSOM, Esq. Solicitor, at the Office of the Auctioneers, Market-hill, Sudbury; or posted free on application.

Valuable STEAM SAW-MILL, PLANING and MOULDING MACHINERY, &c. Harrington-street and Graft n street, with accommodious Land adjoining. By

MR. EDWARD CHALONER, on WEDNESDAY, the 13th of JULY next, at TWELVE o'clock precisely, on the PREMISES, in Harrington street, subject to such conditions as shall be then and there produced, the valuable PROPERTY will be put up together at the upset price of 2,000l all that piece of LAND, situate on the west side of Grafton-street and east side of Harrington street, in St. Pancras Park, in Liverpool, with a frontage of Harrington street, in St. Pancras Park, in Liverpool, with a frontage of 100 yards to each of the said streets, and being 100 yards in depth, and containing 2,000 square yards, together with the Steam Saw mills and other Building thereon erected, known as "Lowell Mills," for many years as the Brunswick Steam Saw mills, with the 16-horse steam-engine, and sawing, planing, and moulding machinery, fixtures, and tools as they now stand (all following after And also all that piece of LAND situate on the east side of Grafton-street aforesaid, and west side of Mann street, with a frontage to each of such streets of 100 yards, and bounded on the north by Northumberland street, with a frontage thereto of 43 yards, and containing altogether 4,300 square yards Both of these properties are close to the new goods station of the Liverpool and Garst n Dock Company, and to the Brunswick Dock The mill may be viewed on applying at the Office on the Premises —For further particulars and for catalogues of the Machinery, apply to Mr. WILLIAM FOSTER, Solicitor, 38, Cannon-street, London; to Messrs. LOWNDES & CO. Solicitors, 3, Brunswick-street, Liverpool; to Mr. EDWARD WHITLEY, Solicitor, 6, Water-street, Liverpool; or to EDWARD CHALONER, Broker, East side Queen's Dock, Liverpool.

BY MR. EDWARD CHALONER.—On WEDNESDAY, the 13th of JULY next, at TWO o'clock in the afternoon precisely (unless previously disposed of by private treaty, of which due notice will be given), at the CLARENDON ROOMS, South John street, Liverpool, subject to conditions of sale to be then produced; being the remainder of the property of Mr. John M'Laughlin left unsold at the sale on the 21st instant. As it is important that the estate should be realised as soon as possible the reserve price on the whole will be considerably reduced.

Lot 1. THREE MESSUAGES, being Nos. 42, 44, and 46, Oxford-street, Liverpool. The tenure is leasehold under the corporation of Liverpool for the residue of a term of seventy-five years, from the 6th day of June, 1864 at a peppercorn rent. If not sold in one lot these three houses will be offered separately.

2. A MESSUAGE, Nos. 1 and 2, Crown-street, Liverpool. The tenure is leasehold under the corporation of Liverpool for the residue of a term of seventy five years, from the 14th day of May, 1831, at a peppercorn rent.

3 A Piece of FREEHOLD LAND, with frontages to Rishton-street and Breckfield-road North, Everton, containing on the south side, in front to Rishton-street, 93 feet 3 inches, on the east side, in front to Breckfield-road, 30 feet and 3 inches; containing in the whole 374 4-8ths square yards or thereabouts. Together with the Three Dwelling houses thereon erected, two of which front to Rishton-street, and the third is intended for a public house and fronts to Breckfield-road North. These buildings are not quite completed, but a very small outlay will be sufficient to complete them.

4. A Piece of FREEHOLD LAND, on the east side of Grey Rock-street, West Derby-road, with a frontage thereto of 99 feet 7 inches, and a depth of 46 feet. Together with the Six nearly-finished Dwelling-houses erected thereon.

5 A Piece of FREEHOND LAND, situate on the west side of Dovestreet, and north side of Solway-street, Lodge-lane, Toxteth Park, with a frontage to Dove-street, aforesaid, of 102 feet, and to Solway street of 43 feet 6 inches, and containing in the whole 493 square yards, or thereabouts. Together with the Seven Messuages and shops erected thereon, and numbered 1, 3, 5, 7, 9, 11, and 13.

6. A Piece of FREEHOLD LAND, situate on the south-west side of Dove-street, Birkenhead, with a frontage thereto of 79 feet 4 inches, and containing in the whole 426 6-9ths square yards, or thereabouts Together with the Six several Messuages and Dwelling-houses erected thereon, and fronting Dove-street, and numbered 25, 27, 29, 31, 33, and 35

7. A Piece of FREEHOLD LAND, situate on the north-west side of Claughton-road, in Birkenhead, with a frontage thereto of 58 feet 3 inches, and containing in the whole, including one half of the common passage, 467 and 6-9ths square yards, or thereabouts. Together with the Five MESSUAGES thereon erected, and being numbered 136, 138, 140, 142, and 144, in Claughton-road.

For further particulars apply, as to lot 1, to Messrs. TENDERS are required for the ERECTION of an OFFICERS' MESS ESTABLISHMENT, and a portion of BOUNDARY WALL, at Milton Barracks, Gravesend.

Persons desirous of Tendering for the execution of these Works are requested to make application to this Office, on or before MONDAY, the 25th JULY, 1864, and to pay the sum of 10s. 6d. for the bills of quantities, which will be forwarded as soon as prepared by the Government Surveyor.

The Secretary of State for War does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Gravesend,
12th July, 1864

WAR DEPARTMENT CONTRACT.— NOTICE to BUILDERS.

TENDERS are required for RAISING No. 2 GUN SHED to increase the Store Accommodation at Chester Castle.

Parties desiring to Tender for the execution of these Works must leave their names at this Office on or before the 21st instant, and pay the sum of 10s. 6d. for the Bills of Quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office 22a, Stretford road, Manchester,
7th July, 1864.

BLACKFRIARS BRIDGE. — TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and steps, Bosch, Portland, and rough rubble. Also for the handsome columns, with moulded bases and carved caps. Apply to Messrs. THORN & CO. Contractors, on the Bridge.

TO BUILDERS.—Parties desirous of CONTRACTING for the ALTERATIONS and ADDITIONS to the CHURCH at PONTRHYDYN, near Mold, can examine the Plans and specifications at our Office, between the hours of NINE a.m. and SIX p.m. from the 7th to the 21st inst. Tenders must be sent to us on or before the 23rd inst. endorsed "Tenders for Pontblyddyn Church." The lowest Tender will not necessarily be accepted.

LLOYD, WILLIAMS, & UNDERWOOD,
Architects and Surveyors.

Park-lane, Denbigh, 4th July, 1864.

BUCKS COUNTY LUNATIC ASYLUM. To BUILDERS, CONTRACTORS, &c.—The Committee of Visitors of the asylum are desirous of receiving TENDERS from persons willing to undertake for EXECUTING the WORKS relating to the Enlargement of the Female Wing of the Asylum, at Stone, near Aylesbury, according to certain plans, which can be seen, and information obtained, at the Office of Mr. D. BRANDON, the Architect, 24, Berkeley-square, London, on and after the 18th day of JULY instant. All Tenders must be sealed up and sent or delivered to me, on or before the 27th day of JULY instant, but the Committee do not bind themselves to accept the lowest or any Tender

ACTON TINDAL, Clerk to the Committee of Visitors.

County Hall, Aylesbury, 13th July, 1864.

TO BUILDERS. — Builders desirous of TENDERING for the ERECTION of an HOTEL at Ilfracombe, North Devon, are requested to send their names to Mr. M. C. W. HORNE, Architect, 30, Guildford street, London, W.C.

NORTH STAFFORDSHIRE RAILWAY. To BUILDERS.—The North Staffordshire Railway Company desire to LET by CONTRACT the ERECTION of Additional WORKSHOPS at Stoke upon-Trent. The Buildings will be principally composed of brickwork, and will be about 250 feet long by 70 feet wide, and divided into bays proper to the purpose. The drawings can be seen, and further information obtained, on written application to Mr. J. C. FORSYTH, the Company's Engineer, Stoke-upon-Trent.

Sealed Tenders to be addressed to the Secretary, at Stoke upon-Trent, and delivered on or before the 1st of AUGUST. The Directors do not bind themselves to accept the lowest or any Tender.

J. SAMUDA, Secretary.

Stoke upon-Trent, July 1st, 1864.

TO BUILDERS.—Persons wishing to TENDER for the ERECTION of a TOWER and SPIRE to St. Mark's Church, Cheltenham, may see the plans and specifications at the Lower Alstone School room, from MONDAY, the 11th of JULY, to FRIDAY, the 22nd instant.

Cheltenham, July 1, 1864. JOHN MIDDLETON, Architect.

CONTRACTS.

TO BUILDERS. — Parties desirous of TENDERING for the ERECTION of new HEAD QUARTERS, DRILL-SHED, &c. at Camberwell, for the First Surrey Rifle Volunteers, can see the drawings and specification at my Office on and after WEDNESDAY, JULY 20th, and obtain bills of quantities, prepared by Messrs. Lumsdaine, and printed forms of Tender, upon paying a deposit of Three guineas, which will be returned to those who deliver a bona fide Tender. The committee do not bind themselves to accept the lowest or any Tender. JOHN T. LEPARD, Architect.

Drummond Chambers, 10, John-street, Adelphi, W.C.
14th July, 1864.

TO RAILWAY CONTRACTORS.—The GREAT NORTHERN RAILWAY COMPANY.—SPALDING to MARCH LINE.—CONTRACT for WORKS and STATIONS.—The Directors of the Great Northern Railway Company are prepared to receive TENDERS for the CONSTRUCTION of the SPALDING and MARCH LINE (about 10½ miles long) and STATIONS. Parties disposed to Tender may obtain the specifications and forms of tender (on which form only Tenders will be received) at the Office of Mr. CUBITT, 37, Great George street, Westminster, S.W. on or after TUESDAY, 12th JULY; where also the working drawings may be inspected, and copies of the general plan and working sections, and other information may be obtained, on payment of 3l. 3s. Tenders sealed up and marked "Tender for Spalding to March Railway and Stations," must be lodged at this Office before TWELVE o'clock at noon on TUESDAY, the 9th AUGUST.

N.B. The Directors do not bind themselves to accept the lowest or any Tender. By order,

HENRY OAKLEY, Secretary.

Secretary's Office, Great Northern Railway, King's cross Station, London, N. June 27, 1864.

THE GREAT NORTHERN RAILWAY COMPANY.—SPALDING to MARCH LINE.—CONTRACT for SLEEPERS. The Directors of the Great Northern Railway Company are prepared to receive TENDERS for the SUPPLY of RECTANGULAR BALTIC SLEEPERS for the Line—about 10½ miles in length. Parties disposed to Tender may obtain the specification and forms of tender (on which form only Tenders will be received) at the Office of Mr. CUBITT, 37, Great George-street, Westminster, S.W. on or after TUESDAY, 12th JULY. Tenders, sealed up and marked "Tender for Sleepers," must be lodged at this Office, before TWELVE at Noon, on 2nd AUGUST.

N.B. The Directors do not bind themselves to accept the lowest or any Tender. By order,

HENRY OAKLEY, Secretary.

Secretary's Office, Great Northern Railway, King's cross Station, London, 27th June, 1864

THE GREAT NORTHERN RAILWAY COMPANY.—SPALDING to MARCH LINE.—CONTRACT for RAILS and FISH PLATES.—The Directors of the Great Northern Railway Company are prepared to receive TENDERS for the SUPPLY of RAILS and FISH PLATES for this Line (about 19½ miles in length). Parties disposed to Tender may obtain the specifications and forms of Tender (on which forms only Tenders will be received), at the Office of Mr. CUBITT, 37, Great George-street, Westminster, S.W. on or after TUESDAY, the 12th JULY.—Tenders sealed up and marked "Tender for Rails and Fish Plates," must be lodged at this Office before ELEVEN o'clock a.m. on TUESDAY, the 2nd AUGUST, when parties Tendering must be in attendance.

N.B. The Directors do not bind themselves to accept the lowest or any Tender. By order,

HENRY OAKLEY, Secretary.

Secretary's Office, Great Northern Railway, King's cross Station, London, N. June 27th, 1864.

NOTICE to CONTRACTORS.—TENDERS are required for REPLACING the present STONE CURBS at the Tower on Grain Spit with NEW CURBS of CORNISH GRANITE. The drawing may be seen, and a specification and form of Tender obtained, on application at this Office, between the hours of TEN and FOUR, from 11th till 23rd JULY inst.

Parties tendering will be required to take out their own quantities.

Tenders will not be received later than 28th JULY inst.

The Secretary of State for War does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Sheerness, 4th July, 1864

BEDFORD. — To BUILDERS. — Persons desirous of TENDERING for the ERECTION of new SHOW-ROOMS, WORK-ROOMS, and WAREHOUSES, for Messrs. The lowest or any Tender not necessarily accepted.

July 12th, 1864.

[For remainder of Contracts see next Page.

TO BUILDERS.—The Trustees of the Tipton Wesleyan Chapel are prepared to receive TENDERS for the ERECTION of a NEW CHAPEL, according to the plans and specifications lying at the Vestry of the old Chapel. The Trustees will meet at the said Vestry at THREE o'clock TUESDAY, AUGUST 9th, to open the Tenders, after which no more Tenders will be admitted. They do not bind themselves to accept the lowest or any Tender.

TO PIPE MANUFACTURERS and OTHERS.—TENDERS are required for 300 feet of 12-inch, 250 feet of 9-inch, and 150 feet of 6-inch, including the necessary bends and junctions, for the Council at Hartlepool, Durham. The Tenders Tenderers must state the lowest terms, cash payment within one month from the date of invoice. The screw Pipes must be of clear sample, round, and well-faced. Tenders to be sent in sealed, addressed to the Board, and to read, "Tenders for Screw Pipes." Tenders to be addressed to WILLIAM ADAMSON, Contractor, Ant House, Hawkhow-road, Hastings, on or before TUESDAY, the 19th of JULY, 1864

TO CONTRACTORS and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for REPAIRING and MAKING UP Park Side street, Battersea, and sheet piling, in the parish of Battersea. The specification can be seen at the offices of the Board, as below, between the hours of TEN and FOUR. Tenders are to be sent in sealed, addressed to the Board, and to read, "Tenders for Repairs to Streets, Battersea," on or before MONDAY, 25 JULY inst. No tender will be required for the due execution of the Contract. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District.

ARTHUR ALEX. CORSELLIS, Clerk to the Board.
Battersea-rise, Wandsworth, 2nd July, 1864.

ST. MARYLEBONE, July 7, 1864.—To PAVIORS, MASONS, CONTRACTORS, &c.—Notice is hereby given, that the Vestry of the Parish of St. Marylebone, in the County of Middlesex, assembled in the Board Room of the Court House of the said parish, in Marylebone-lane, on THURSDAY, the 21st day of JULY, 1864, will be ready to receive the aforesaid, proper, and true TENDERS for paving with Granite, and Contract for the RELAYING and REPAIRING of a portion of the CARRIAGE-WAY of OXFORD-STREET, and for NEW LAYING of the Footpaths of Castle-street with 6-inch by 3-inch Mount Sorrel Granite Paving. — Further particulars may be known and specifications seen, on application to the Vestry Clerk, at the Vestry Hall, on any day (except Sunday) in office hours, between the hours of TWELVE and ONE o'clock. The Contractors to find satisfactory security for the performance of the Works, and to pay the expenses of the bond and sheet. The Tenders to be sent to the Vestry Clerk, sealed and endorsed, "Tender for Paving Works," before ELEVEN o'clock in the forenoon of the 21st day of JULY inst., at which hour will be publicly opened. ELEVEN o'clock. The Vestry will expect the parties tendering, or some person on their behalf, to be in attendance at the time of opening the Tenders. The Vestry do not pledge themselves to accept the lowest or any of the Tenders.—By order,

W. E. GREENWELL, Vestry Clerk.

CARDIFF HOTEL COMPANY (Limited).—TO BUILDERS.—TENDERS will be received for BUILDING an HOTEL in St Mary-street, Cardiff, for the Cardiff Hotel Company (Limited). The specification and arrangement plan to be seen at the Company's Office, 23, Trinity-street, Cardiff; and copies of the bill of quantities may be obtained, after the 20th instant, upon payment of one guinea each. Sealed Tenders, endorsed "Tender for Hotel," to be delivered at the above Office, addressed to the Secretary, HENRY HEAD, Esq., not later than on the 3rd of AUGUST next. The Directors do not bind themselves to accept the lowest or any Tender. C. E. BERNARD, Architect.

Cardiff, July 11th, 1864.

TO BUILDERS.—Trinity House, London, EC. 11th July, 1864.—The Corporation are desirous of obtaining TENDERS for the ERECTION of a STOREHOUSE and OTHER BUILDINGS at their Quay Wharf at Bankwell, lately in the occupation of Messrs. Forster and Sons, formerly of Deptford, and purchased of the present holders at compensation valuation. Plans and specifications may be seen at the Quay Wharf, and also on application at the Trinity House, on and after MONDAY, the 18th instant, between the hours of TEN o'clock in the forenoon and FOUR in the afternoon. Tenders are not to be sent in unless the parties tendering are prepared to enter into a contract (if required) on and after SATURDAY, the 30th instant, and to the number of TEN o'clock in the forenoon of the said 30th day are sealed Tenders to be addressed to the Gentlemen of the Lewisham Board, and marked "Tender for Buildings." The parties Tendering will be expected to be in attendance on the said 30th instant, at the hour named. The Corporation will not bind themselves bound to accept the lowest or any Tender; and the Contractor will have to enter into a sufficient Contract (either with or without sureties as the Gentlemen shall require for the execution of the Works. Duplicate plans, specification, &c., can be seen at the Office of Mr. WALLEN, Architect and Surveyor, 4, Laurence Pountney-hill, Cannon-street, E.C.—By order,

THOMAS PARKER, Clerk

Lewisham, 13th July, 1864

TO CONTRACTORS, QUARRY OWNERS, MINERS, &c.
BLAKE'S STONE BREAKER is recommended by the best Engineers in this and other countries to break Stone of every description, of the best quality for Macadam Roads, Concrete, Ballasting Railways, &c. It reduces large blocks or round boulders, and reduces them to fine road metal, at a cost of from 6d. to 1s. per ton. If your present labourers cannot per day, this machine will do more work, and do it better, at 2d.—For circular to Blake, &c. apply to

H. R. MARSDEN,
SOHO FOUNDRY, LEEDS.

PLASTER ENRICHMENTS, CENTRE FLOWERS, STOP FRONT TRUSSES, VASES, ROYAL ARMS, CAPITALS, And every description of ornament for inside and external decorations, executed in Plaster, Carton Pierre, Composition, and every kind of Cement, at reduced prices.

MESSRS. HERBERT, MODELLERS, 212, EUSTON ROAD, ST PANCRAS.

Best Gelat in prepared, and ready for moulding, 2s. per lb.
Best Fine White Plaster, 3s. per cwt. Carriage free to 20 miles.

PLASTER of PARIS.—The ONLY London Maker, the best and the oldest established (1830), is ROBINSON, MOUNT PLEASANT, GRAYS INN-ROAD, HOLBORN.

The cheap country made article is used by nearly all the dealers, agents, and pretending manufacturers, careless as to quality. Superfine and fine Plaster unequalled. Good plaster saves labour and vexation.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

BARTON, having entered upon the extensive Premises, No. 370, Oxford street, and joining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well-selected STOCK of STALL and LOOSE-BOX FITTINGS, HARNESS ROOM REQUISITES, &c., also to invite inspection of the Newly erected Practical Stable, now on view. Illustrated Catalogues on receipt of Four Stamps

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

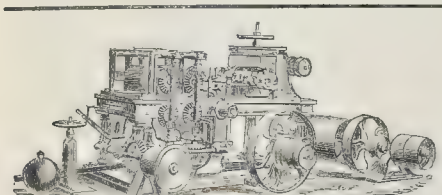
EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.



They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

THE MERCHANDISE MARKS ACT, 1862.

CAUTION.

WHEREAS, Messrs. JOHN REYNOLDS & SON, of the CHUNK, CROWN, and PHŒNIX CUT NAIL WORKS, New Town-row, Birmingham, in the county of Warwick, Cut Nail Manufacturers, have at various times heretofore discovered that certain Persons were in the habit of infringing upon and counterfeiting their Trade Marks, Labels, and Tallies, which are their exclusive property, but, upon such persons promising to discontinue such infringement and counterfeiting, they have forborne to take legal proceedings against them. Now, therefore, NOTICE is hereby given, on behalf of the said Messrs. John Reynolds & Son, that from hence forth all and every persons and person whomsoever who shall at any time be discovered infringing or counterfeiting any of their said Trade Marks, Labels, or Tallies, by impressing any forged or counterfeit Trade Mark, Label, or Tally of the said firm of John Reynolds & Son upon any description of cut nails, tacks, brads, or shoe-bills, or upon any packet, parcel, or bag containing cut nails, tacks, brads, or shoe-bills, or upon any other article whatsoever similar to those manufactured by the said firm of John Reynolds & Son, and upon which they are solely entitled to and do use and affix their said Trade Marks, Labels, and Tallies, or any fraudulent imitation of any of such Marks, Labels, or Tallies, or be in any way engaged in the sale or disposal of any goods so fraudulently marked, labelled, or tailed, as aforesaid, will render themselves liable to be indicted for a MISDEMEANOUR under the provisions of "The Merchandise Marks Act, 1862;" and legal proceedings will be immediately taken by the said Firm against all and every such Persons and Person.

NOTICE is also hereby given, that the following are the respective Trade Marks, Labels, and Tallies of, and are those now actually used by, the said Firm of John Reynolds & Son in their said Trade:—

TRADE MARKS, LABELS, AND TALLIES USED UPON ALL CUT NAILS, TACKS, BRADS, SHOE BILLS, AND OTHER ARTICLES MANUFACTURED BY THE SAID FIRM.

* Here is inserted the descriptive particulars of the Nails, Tacks, Brads, or Shoe Bills enclosed in the respective packets, parcels, or bags, marked with the said Marks, Labels, or Tallies

Dated this 21st day of June, 1864.

GEO. G. POLE,

For price, particulars, &c. apply to the Manufacturers,

W. W. & R. JOHNSON & SONS,

WHITELEAD WORKS LIMEHOUSE, LONDON E.

R. FOX, 5, Conant-place, West-India-road, E. Contractor for laying Devaux's thick Vieille Montagne Roofing Zinc for the new system introduced by Mr. Edmeston, Architect to the Vieille Montagne Zinc Mining Company, of Crown-court, Old Broad street, E.C.) by which durability and great neatness of work are obtained; Sash and Skylight Maker. All kinds of Ornamental and other Zinc Work executed in the best manner.

SMOKY CHIMNEYS,

S. DEACON

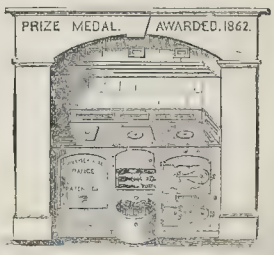
Respectfully invites the attention of Architects Builders, &c to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by



S. DEACON,

59, ALMA STREET, HOXTON.

MANUFACTORY:

HEMSWORTH STREET, SAINT JOHN'S ROAD, HOXTON, LONDON, N.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862. AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT-IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 1.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the plainness of the OVEN and ROASTER, one above the other, instead of side by side; and the ROASTER is constantly replenished with fresh air."

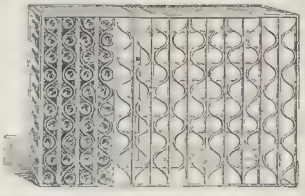
WROUGHT IRON WINE BINS.

FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.



The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great improvements have been made to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE, Peculiarly adapted for Private Cellars.

No labels are required, and all trouble of Racking is avoided. The Cellar Bins may also be laid fitted with light lattice doors, affording perfect security to the contents of the Bin.

ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ironmongers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

WINDOW-BLIND MATERIALS. —

H. & J. DOVE, 31, Ludgate-hill, London, E.C. VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR
DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive of expense of Timber or Iron Framing, in all parts of England.
Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done and in best examination.
Cheap Zinc laying will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.
Thin Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

THE LAND SECURITIES COMPANY

(Limited).
Capital, 2,000,000*l.*
Directors.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

Sir Henry Stracey, Bart. M.P.
William Tipper, esq.
Henry Farquhar, esq.
Sir John Gray.
John Horsfall Lloyd, esq.
Hon. William Napier.
Hon. Henry Petre.
Sir Charles Rich, Bart.
Granville Richard Ryder, esq.
Philip Twells, esq.

OFFICES—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, Fenchurch-street, (Old Broad-street, E.C.), Office of International Financial Society.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security of—

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed (or under the authority of any Act of Parliament, public or private, Board of Sewers, Commissioners of Sewers, Drainage, or other official authority).

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, freely given, or issued, under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the negotiation of special Assessments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

VENTILATION—PURE AIR.

for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

TARPAULINS, MARQUEES, &c.

for SALE or HIRE.
SCAFFOLD AND HEMP ROPE FALLS.

Asphalte for Railway Arches and Iron Bridges.

The Builder.

VOL. XXII.—No. 1119.

The Northern Low-level Sewer.

UR recently published particulars of the main arrangements and of some of the chief structural details of the outfall of the London sewerage, north of the Thames, will have reminded the reader, even resident at a distance from the metropolis, of the conditions of level which had to be considered in the general design. It was possible, by one sewer of interception for the drainage of Hampstead, Holloway, Stoke Newington, and districts similarly elevated, and by another for that of Kensal-green, Bayswater, Oxford-street and Piccadilly, Old-street, and Bethnal-green, (including branches,) to get streams to flow converging to a point at Old Ford; whence this sewage of the High-level and the Middle-level could continue in parallel channels to the spot, near Barking Creek, at which is situate the combined arrangement of reservoir and outlets which we described. To effect the drainage of those levels, thus, by gravitation only, and not to bring the outlets down to much below the level of high-water, involved, as we have seen, an incline not greater than 2 feet per mile. But, a large portion of the metropolis is by no means so advantageously circumstanced as the districts specified. Under the arrangements which must remain up to the completion of the new works, the low-levels can be drained only at or about the time of low-water; whilst provision of an intercepting sewer results in bringing the sewage finally to a level which is below low-water mark, by some 10 feet, or even much more, if the length and fall have been continuous. Thus, the operation of lifting sewage is an essential feature of the actual scheme for London; and we were amongst those who in the early stages of the design, looked with anxiety to the description of machine that might be used for a purpose for which some persons had declared valved pumps to be inapplicable. When, shortly, we revisit the south side of the Thames, we may have an opportunity of inspecting the machinery, some of which we have described from the original drawings, that is or is about to be in operation. Mr. Bazalgette's report presented on Friday in last week, shows that since our recent articles were written, a portion of the sewage of the south side has commenced to be discharged at Crossness Point. The pumps, however, there, are not at work: the arrangements are only temporary; and the Deptford pumping machinery has only in part been brought into use. The benefit derived by the Northern Low-level districts, so far, from the sewerage, is that the sewage of the higher levels, or so much of it as is connected with the completed portion of the systems, no longer adds its volume to contents of those sewers that are tide-locked. The area of London, which is under the conditions of level that have been described, comprises not merely the margins of the Thames, but districts extending far inland, and many of them thickly populated.
